Persons desirous of TENDERING for the ERECTION of a COAST GUARD STATION at Southsea, in the county of Hants, may inspect the Drawings and Specification at the Coast Guard Watch House, Southsea, or at this Office, between the hours of TEN and FOUR from TUESDAY, the 13th inst. to WEDNESDAY, the 28th day of SEPTEMBER, now next ensuing, and both inclusive (Sundays excepted).
Tenders to be sent to this Office not later than TWELVE o'clock at noon, of the 29th SEPTEMBER, in due seal, directed to the Commissioners Controller General of Coast-Guard, and endorsed "Tender for Southsea."
The Lords Commissioners of the Admiralty do not pledge themselves to accept the lowest or either of the Tenders.
Dated this 6th day of September, 1864, at the Admiralty, Coast-Guard Office, 12, Spring-gardens, London, S.W.

TO BUILDERS. — Persons desirous of giving TENDERS for the ERECTION of a CONGREGATIONAL CHURCH, Forest Lane, Leytonstone, may see the drawings, and obtain all information, by application to the Architects,
Messrs. WM. G. HABERSHON & PITE,
28, Bloomsbury-square, London, W.C.

BOROUGH of WOLVERHAMPTON,
SEWERAGE WORKS CONTRACT No. 1.—To CONTRACTORS.—Persons desirous of TENDERING to execute about 3½ MILES of MAIN SEWERS, including VENTILATING SHAFTS, MANHOLES, OVERFLOWS, TUMBLING BAYS, and other WORKS connected therewith, in the said Borough, may inspect the plans sections, details, and specification, at the offices of the Borough Surveyor, Town-hall, North-street, on and after FRIDAY, the 9th day of SEPTEMBER, between the hours of TEN o'clock in the morning and FOUR o'clock in the afternoon. Sealed Tenders to be sent in on or before THURSDAY, the 6th day of OCTOBER next, addressed to the "Sewerage Committee, Town-hall, Wolverhampton," and endorsed "Tender for Sewerage Works, Contract No. 1." The Committee do not bind themselves to accept the lowest or any Tender. No Tender will be received after SIX o'clock p.m. of the above named day. Each Tender to specify the due performance of the work. Printed copies of the specification and form of Tender may be obtained at the Borough Surveyor's Office on payment of 5s.
E. J. PERNELL, Borough Surveyor.
Town-hall, Wolverhampton, September 5, 1864.

BUILDERS and CONTRACTORS willing to TENDER for REPAIRS and ERECTION of Additional BUILDINGS proposed at Shottery Hall near Stratford-on-Avon, may inspect the specification, and send in their Offers, at the Office of Mr. JOSEPH LANGTON, Architect and Surveyor, Stratford-on-Avon. Proposals to open on DOUGLAS CURRY, Royal Naval Hospital, Plymouth, to whom Tenders are to be delivered on or before the 3rd day of OCTOBER next. The Proprietor will not bind himself to accept the lowest or any Tender.
August 31st, 1864.

PARISH of CHELSEA, in the County of Middlesex.—LINTS.—The Vestry of the Parish will meet at the Vestry Hall, King's road Chelsea, on TUESDAY, the 27th day of SEPTEMBER next, at THREE o'clock in the afternoon precisely, to receive TENDERS from persons willing to CONTRACT for TWELVE MONTHS, from the 29th day of SEPTEMBER, up to and inclusive of the 31st day of AUGUST, 1865, for the SUPPLY of the BEST CLEAN GREY BROKEN PITCHAD FLINTS, according to the sample to be seen here, to be delivered at the Free Dock, at Cremorne Walk, at such times and in such quantities as may be directed. The Vestry do not bind themselves to accept the lowest or any Tender. Sealed Tenders signed by the proposed contractor, with the names and description of two sufficient sureties for the performance of his contract, to be delivered to the Clerk, by or before TWELVE o'clock, on TUESDAY, the 27th day of SEPTEMBER instant. No Tender will be received or accepted unless made on one of the printed forms, to be obtained at my Office—By order,
CHARLES LAHEE, Vestry Clerk.
Vestry Hall, King's road, Chelsea, September, 1864.

TO MASONS, PAVIORS, STONE MERCHANTS, and OTHERS.—The Vestry of the Parish of Chelsea will meet at the Vestry Hall, King's road, on TUESDAY, the 27th SEPTEMBER next, at THREE o'clock in the afternoon, to receive TENDERS from Persons willing to Contract, for twelve months, for the EXECUTION of WORKS, and for the SUPPLY of MATERIALS connected with those works, in the said Parish, as may be required and ordered. Further particulars, with the form of Tender, may be had on application at the Office. Sealed Tenders, signed by the proposed Contractor, with the names and description of two sufficient sureties for the performance of a contract, to be delivered to the Clerk by or before TWELVE o'clock on the said 27th SEPTEMBER instant. The form of Contract will be prepared at the expense of the Vestry. No Tender will be received or accepted unless made on the printed form.—By order,
CHAS. LAHEE, Vestry Clerk.
Vestry Hall, King's road, Chelsea, September, 1864.

TO SEWER CONTRACTORS, BRICKLAYERS, and OTHERS.—The Vestry of the Parish of Chelsea will meet at the Vestry Hall, King's road, on TUESDAY, the 27th SEPTEMBER instant, at THREE o'clock in the afternoon, to receive TENDERS from persons willing to CONTRACT for Twelve months, for the EXECUTION of such BRICK and STONE WORKS connected with the SEWERAGE WORKS, according to a schedule of prices now in use at the Office. Copies of the specification of the Contract, and form of Tender may be had on application at the Office. The Vestry do not bind themselves to accept the lowest or any Tender, and reserve to themselves the right of making the Contract in parts, if they think fit. The Vestry do not bind themselves to accept the lowest or any Tender, and reserve to themselves the right of making Special Contracts for any part or parts of the Works. Each Tender to be signed by the party tendering, with the names and description of two sufficient sureties for the performance of a contract, to be delivered to the Clerk by or before TWELVE o'clock on the said 27th SEPTEMBER instant. The Contract will be prepared at the expense of the Vestry. No Tender will be received or accepted unless made on the printed form.—By order,
CHARLES LAHEE, Vestry Clerk.
Vestry Hall, King's-road, Chelsea, September, 1864.

FURNESS GAS and WATER WORKS COMPANY.—The Directors of the Furness Gas and Water Works Company are prepared to receive TENDERS for the CONSTRUCTION of an IMPOUNDING RESERVOIR and other WORKS. Abingdon, Sept. 1, 1864.

TO BUILDERS. — Persons desirous of TENDERING for the WORKS required in the ERECTION of a NEW CHURCH at Ilkley, Yorkshire, may inspect the plans at North End Villa, Ilkley, or at our Offices, St. James's-street, Sheffield, where bills of quantities may be obtained, from MONDAY, the 19th day of SEPTEMBER to WEDNESDAY, the 28th, on which latter day Tenders are to be delivered, addressed to the Rev. ARTHUR PETTIT, Ilkley. No pledge is given that the lowest or any other Tender will be accepted.
BLACK OOR & MITCHELL WITHERS, Architects.
Sheffield and Rotherham.

TO SEWER CONTRACTORS and OTHERS.—The Local Board of Health for the District of Watford respectfully invite TENDERS for the CONSTRUCTION of about 7,000 feet of 12-inch PIPE SEWER, and about 2,000 feet in length of smaller Pipe sewer, with the necessary gully gratings, inverted and vaulting Shafts. Plans and specifications may be seen, and printed copies of the specification, schedule of prices, and form of Tender, on payment of 1s. obtained, at my Office, in Watford, on and after the 19th SEPTEMBER instant; and sealed Tenders, endorsed "Tenders for Drainage," must be delivered free to me on or before the 6th OCTOBER next. The Board do not bind themselves to accept the lowest or any Tender, and reserve to themselves the right of subdividing the contract, and letting separately one or more of the divisions described in the specification.
JOHN REDGWICK, Clerk to the Local Board.
Watford, September 15, 1864.

CONTRACT for LAYING GRANITE CURB and SETS, and YORK PAVEMENT.—The West Ham Local Board of Health are prepared to receive TENDERS from parties willing, from time to time, to REMOVE the above-named materials from the Victoria Docks or Wharfs on the River Lea, and to LAY the same on the Roads, Paths, and Public Streets in the district, in accordance with specifications and conditions, which may be examined at the office of Mr. MARSHALL, the Surveyor to the Board, at his Office, in Rokeby House, Stratford, E. and the Tenders are to be sent addressed to me, and indorsed "Tender for Pavement, &c." on or before MONDAY, the 10th OCTOBER next.—By order of the Board.
CHAS. WILSON, Clerk to the Board.
Rokeby House, Stratford, 13th September, 1864.

GRANITE CURB and SETS of YORK PAVEMENT.—The West Ham Local Board of Health are prepared to receive TENDERS from parties who may be willing to DELIVER any of the 6 MATERIALS, either in the Victoria (London) Docks, or on the Wharfs on the River Lea as may be named. Forms of Tenders, with any particulars and information required, may be obtained by application to Mr. MARSHALL, the Surveyor to the Board, at his Office, in Rokeby House, Stratford, E. and the Tenders are to be sent addressed to me, and indorsed "Tender for Pavement, &c." on or before MONDAY, the 10th OCTOBER next.—By order of the Board.
CHAS. WILSON, Clerk to the Board.
Rokeby House, Stratford, 13th September, 1864.

ST. GILES'S, CAMBERWELL.—To STONE MERCHANTS, MASONS, PAVIORS, KENTISH RAG, GRANITE, and GRAVEL MERCHANTS, CARTERS, SMITHS, IRONMONGERS, BRICKLAYERS STONEMERS, PLASTERERS, and OTHERS.—Notice is hereby given, that the General Purposes Committee of the Parish will meet on MONDAY, the 10th of OCTOBER next, at FOUR o'clock in the afternoon precisely, to receive TENDERS from such persons as may be desirous of entering into a CONTRACT for the SUPPLY of the undermentioned MATERIALS and LABOUR in connexion with the above trades, and as may be required to be executed and supplied in the several districts of the said parish. Separate Tenders for the supply and performance of the above-named Works will be required, the forms of which, and other particulars, may be had on application to Mr. J. C. REYNOLDS, Surveyor to the Vestry, at the Office of Works, Walworth-road, Southwark, or at 1, Camberwell, between the hours of ELEVEN and THREE o'clock. Approved sureties will be required for the due performance of the contract, the names and addresses of the parties proposed as such sureties must be delivered with the tenders. The Committee do not profess themselves to accept the lowest or any tender. The parties Tendering, or their agents on their behalf, must attend at the time above named, or their Tender will not be received.
GEO WM. MARSDEN, Vestry Clerk.
Vestry Hall, Camberwell, September, 1864.

PARISH of ST. GILES, CAMBERWELL.
TO SEWER CONTRACTORS and OTHERS.—The Sewers and Sanitary Committee will meet to receive TENDERS for the EXECUTION of Joining and General WORKS connected with the Sewers and Drains of this Parish, on TUESDAY, the 4th day of OCTOBER, at Half-past SIX o'clock precisely, at the Vestry Hall, Camberwell. Printed forms of Tender will be supplied, and no Tender will be received unless in accordance with the instructions contained in the specification and conditions, and the parties Tendering must be in attendance when the Tenders are opened. The Committee do not bind themselves to accept the lowest or any Tender.—Particulars to be obtained on application to Mr. J. C. REYNOLDS, Surveyor to the Vestry, at the Office of Works, Walworth-road, Southwark, Camberwell, between the hours of ELEVEN and THREE o'clock.
GEORGE WM. MARSDEN, Vestry Clerk.
Vestry Hall, Camberwell, September 21, 1864.

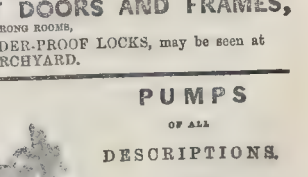
WROUGHT IRON WINE BINS.

FARROW & JACKSON

Beg to call the attention of Architects and Builders to the WROUGHT IRON WINE BINS, which are ADAPTED (as shown) either for BRICK ARCHED VAULTS or CELLARS with FLAT CEILINGS, the mode of fixing in either case being so simple, that they may be put up by any ordinary workmen. They combine great strength with lightness and economy of space, and their DURABILITY has been practically PROVED DURING nearly FORTY YEARS.

The Shelves are formed of Plates of Iron laid on Bars, which rest on the Cross-bars of the Lattice Uprights, and are removable at pleasure.



Plans and Estimates furnished, and Cellars fitted complete in any part of the Kingdom.

*** As these Bins were the invention of the late Mr. FARROW, and great attention has been given to them by the present Firm, long practical experience enables FARROW & JACKSON to offer the best advice as to arrangement.

ALSO THEIR

NEW REGISTERED IRON BINS,

Made any size or shape, to fit any spare corner, with SEPARATE REST FOR EACH BOTTLE,
Peculiarly adapted for Private Cellars.
No laths are required, and all trouble of Binning is avoided. The Cellular Bins may also be had fitted with light lattice doors, affording perfect security to the contents of the Bin.

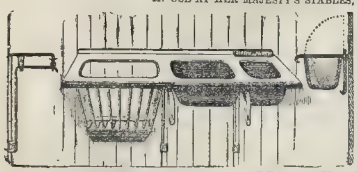
THE PRIZE MEDALS

LONDON, 1851. PARIS, 1855. LONDON, 1862.

Awarded to

COTTAM & COMPANY,

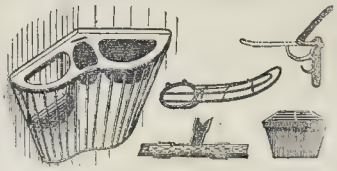


2, WINSLEY STREET, LONDON, W.

For Progressive and General Improvements in

STABLE FITTINGS AND HARNESS BRACKETS.

AWARDED A PRIZE AT THE PARIS EXHIBITION,
PATRONIZED BY THE ENGLISH AND FRENCH GOVERNMENTS, AS WELL AS BY THE PRINCIPAL NOBILITY, GENTRY, AND HUNTING ESTABLISHMENTS IN THE KINGDOM
IN USE AT HER MAJESTY'S STABLES, ALDERSHOTT AND BALMORAL.



COTTAM & COMPANY, Winsley-street, W. are the original Inventors of the PATENT ENAMELLED MANGER, Water-trough, and Wrought-iron Rack, united to an Iron Top-plate, all forming one complete and useful Fixture, having COTTAM'S Patent Noiseless Halter guide and Collar-rein attached, which is taken to the back of the Manger, and works with ease and freedom up or down the guide bar.

COTTAM'S NEW PATENT SEED BOX, an important addition to the above fittings, being simple in construction, light, and durable, promotes cleanliness, and is economical in its results.

COTTAM'S PATENT PERMANENT ATTACHED DROP COVER for the above is a most essential addition to their fittings; it is never in the way; can be placed and replaced in an instant; while its cheapness, simplicity, and utility in keeping the contents of the troughs clean, and regulating the quantity to be taken, is quite sufficient to insure its use.

COTTAM'S PATENT SADDLE AND HARNESS BRACKET COMBINED

can be used with great advantage where space is an object, as it can be turned up out of the way when not in use.

COTTAM'S IMPROVED WROUGHT-IRON VENTILATING BRACKET preserves the shape, and allows the free admission of air to the under parts of the saddle.

COTTAM'S IMPROVED SURFACE GUTTER, with perforated moveable cover, the use of which prevents accidents, and can be easily cleaned out.

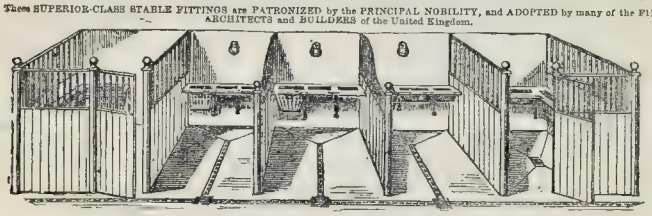
COTTAM'S CAST-IRON SANITARY TRAP, from its improved construction, gives a full water-passage, and does not allow any smell to ascend from the drain.

PATENT LOOSE BOX FITTINGS, and every article for the harness-room and stable, kept in stock, plain, galvanized, and enamelled. Iron Gates, Fencing, Hurdles, &c.

Illustrated Catalogues and Estimates gratis, upon application to

COTTAM & CO. 2, WINSLEY STREET, OXFORD STREET, LONDON, W.

WHERE FULL-SIZED STALLS, LOOSE BOXES, AND HARNESS-ROOM, &c. ARE FITTED UP, SHOWING ALL COTTAM'S PATENT IMPROVEMENTS, &c.



COTTAM & CO.'S only address in London is 2, WINSLEY STREET, W.

N.B.—WINSLEY STREET IS THE STREET OPPOSITE THE PANTHEON.

BY APPOINTMENT TO H.R.H. THE PRINCE OF WALES

BARTON'S PATENT PRIZE MEDAL STABLE FITTINGS.

These SUPERIOR-CLASS STABLE FITTINGS are PATRONIZED by the PRINCIPAL NOBILITY, and ADOPTED by many of the FIRST ARCHITECTS and BUILDERS of the United Kingdom.

BY APPOINTMENT TO H.R.H. THE PRINCE OF WALES.

J. BARTON, having entered upon the extensive Premises, No. 370, Oxford-street, adjoining his Patent Stable Fitting Manufactory, begs to solicit attention to his large and well-selected STOCK of STALL and LOOSE-BOX FITTINGS, HARNESS ROOM REQUISITES, &c.; also to invite inspection of the newly-erected Practical Stable, now on view. Illustrated Catalogues on receipt of Four Stamps.

JAMES BARTON, IRON WORKS, 370, OXFORD STREET, LONDON, W.

EXHIBITION PRIZE MEDAL, 1862, AND MEDAL OF ROYAL AGRICULTURAL SOCIETIES OF ENGLAND AND IRELAND.

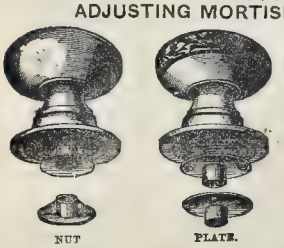
MUSGRAVE'S PATENT STABLE and HARNESS FITTINGS.

MUSGRAVE'S PATENT HARMLESS LOOSE BOXES.

MUSGRAVE'S PATENT IRON COW STALLS and PIGGERIES.

Architects who have not seen these fittings are requested to write for engravings, as they are unlike those of any other maker, and were admitted to excel all the work of their class in the Exhibition.

They can be seen in first-class stables in almost every county in England; and MUSGRAVE, BROTHERS, are now fitting several very large establishments under direction of London architects, noted for employing only what is the best of its kind.



Musgrave's Patent Slow-combustion Stove

Is the nearest approach to Warming by Hot Water. It will burn in churches from Saturday till Sunday evening, without attention during the hours of worship. In halls will burn day and night for weeks, with little care. Capable of warming a large apartment for twenty-four hours, at a cost of 3d.; and deserving of special attention because of its safety, healthfulness, durability, and extreme simplicity.—For full particulars apply to

MUSGRAVE, BROTHERS, Ann-street Ironworks, Belfast.

SIMPLICITY, UTILITY, ECONOMY, AND DURABILITY.

THOMAS PUGH & CO.'S NEW PATENT ECONOMIC SELF-ADJUSTING MORTISE AND RIM LOCK FURNITURE.

NUT PLATE.

J. B. SCAMMELL & CO. (late Thomas Pugh & Co.)

WHOLESALE IRONMONGERS,

13, KING STREET, SNOW HILL, LONDON.

We invite particular attention to the PATENT LOCK FURNITURE, which we do not hesitate to say is the most perfect article now manufactured, great improvements having been recently made in it. It has been extensively used in Public and Private Buildings, in Her Majesty's Pavilion and Camp at Aldershott—alone, many hundred sets without one single failure. It is applicable to all Locks and Latches, both Rim and Mortise, and effects a most secure fastening, without any screw in the neck of the knob. Perfect action guaranteed in both Locks and Furniture, if the Locks are of our own manufacture.

New rich Designs in Glass, China, Brass, Bronzed, Gilt, Carved Woods, Inlaid, &c. &c. or to any Design.

THIS FURNITURE MAY BE HAD WITH PLATES OR NUTS.

A most complete and extensive stock of every description of Locks, Latches, Brass Foundry, and Ironmongery, required for Buildings, of the best quality manufactured, at the lowest wholesale prices.

*** Illustrations and Particulars sent on application.

WAREHOUSES FOR NAILS, PIPES, GUTTERS, &c. IN ST. JOHN'S COURT.

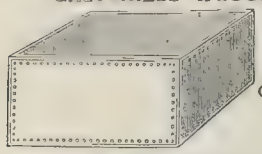
DAVID JONES, BRIDGE IRONWORKS, and HERBERT'S PARK IRONWORKS, Bilston, Staffordshire, Manufacturer, under Licence of the Patentee, of



MALLET'S PATENT BUCKLED IRON PLATES,

for Flooring, for Railway and other Bridges, Viaducts, Wharfs, &c. and for the Flooring and other parts of Fire-proof Buildings, and various important structural uses. These plates form the lightest, strongest, most rigid, and durable flooring known. They were pronounced by the late Mr. Brunel, "the best bridge flooring extant." They have been adopted at the New Bridge, Westminster, on the Indian Railways, and in many other first-class structures, by Messrs. Page, Hawkshaw, Rendell, Stephenson, and other Engineers; and for Fire-proof Buildings by Government, the War-office, Metropolitan Board of Works, and other important uses.—Application for lithographic circulars, prices, and other information as to supply of the Plates, to be made to the Manufacturer as above, or to ROBERT MALLET, Esq. C.E. the Patentee, 11, Bridge-street, Westminster.

N.B.—Manufacturers of Boiler Plates, Bridge and Ship Plates, also Sheet Iron of all kinds, and Rivet Iron of best quality.—Address, BRIDGE IRON WORKS, Bilston, Staffordshire.

THE BEST STEAM-THRASHING MACHINERY MADE.

"By Royal Letters Patent."

"Indicator" Dial, 2½ in. diameter.

ELECTRIC BELLS FOR DOMESTIC USE.

BREGUET'S PATENT INDICATOR SYSTEM, with a Dial which shows when the Bell is ringing, the same as in use at the Grand Hotel, Boulevard des Capucines, Jockey Club, &c. Paris.

The superiority of Electric Bells is already settled in America and in France. For all modern works at Paris they have as effectually superseded the old crank and pull plan as, for travelling, the railway has superseded the antiquated stage-coach.

ADAMS & SON have much pleasure in stating that they have made arrangements with Messrs. Breguet, of Paris, to become their sole Agents for the sale and fixing of their Patented Apparatus upon the "indicator system," which has great advantages over all others, and is especially adapted for hotels, public buildings, and other large establishments. The details of this ingenious instrument, together with a description of the various apparatus in use for Electric Bells, may be had upon application, or by post.

WILLIAM S. ADAMS & SON,

Ironmongers by appointment to the Queen and his Royal Highness the Prince of Wales, and also to the principal London Clubs,

Near Grange-road, Bermondsey.

SAVING IN GAS.

D. HULETT, INVENTOR and PATENTEE. The Mercurial Gas Regulator is the only efficient instrument for insuring uniformity and uniform lighting, combining the pressure, and preventing any irregularity in the height of the flame.

D. HULETT & CO. 55, High Holborn, London,

Manufacturers of Gas Chandeliers, Glass Lustres, &c. &c.

DAY and GAS LIGHT REFLECTOR MANUFACTURER.—THOMAS FOX, 90, Hatton Garden, E.C. and 38*A*, Charles-street, Hatton Garden, E.C. A large assortment of Coloured Glass Globes, Lamp Shades, &c. always on hand. All kinds of Best Glass silvered.

N.B.—The usual discount to BUILDERS and the TRADE.

TO IRONMONGERS AND THE TRADE GENERALLY.

D. HULETT & CO. Manufacturers of GAS CHANDELIERS, HALL LANTERNS, GLASS LUSTRES, &c. &c. A large assortment of the newest designs always on show, every article marked in plain figures. Patentees, and Manufacturers of the Mercurial Gas Regulator. Complete Pattern-book and Price-lists 12*s.*—Nos. 55 and 56, High Holborn.

CAUTION to ARCHITECTS and BUILDERS.—In consequence of complaints arising from the substitution of INFERIOR and SPURIOUS ARTICLES instead of

SMITH'S PATENT DOUBLE-ACTION DOOR SPRINGS;

SMITH'S PATENT WEATHER-TIGHT WATER BAR; and

SMITH'S PATENT WEATHER-TIGHT CASEMENT FASTENING for FRENCH WINDOWS:

The above are most respectfully requested to observe that all GENUINE ARTICLES are stamped with the NAME and ADDRESS, SMITH, Patentee, 69, Princes-street, Leicester-square, London; and SUCH ONLY are WARRANTED

IMPROVED GASWORKS for MANSIONS and ISOLATED BUILDINGS.—Several medals and prizes have been awarded by various societies for excellence of construction and efficiency. References to the nobility, &c.

J. T. B. PORTER & CO. Lincoln,

And 7, John-street, Adelphi, London, W.C.

N.B.—Plans, specifications, &c. for towns and other works of any magnitude.

G. L E W A L,

HEATING and VENTILATING ENGINEER, PATENTEE And MANUFACTURER of the

IMPROVED SMOKE-CONSUMING APPARATUS,

For CHURCHES and LARGE PUBLIC and OTHER BUILDINGS;

Consumes the Smoke, Warms the Building with pure Atmospheric Air, and saves Coal and Labour;

And of the APPARATUS with PRISMATIC TUBES,

For PRIVATE HOUSES, OFFICES, WARDS of HOSPITALS, &c.;

Saves 50 per cent. in Fuel, cures Smoky Chimneys, shows always a Cheerful Fire, and one Fire will warm other Rooms.

HEATING APPARATUS upon the most approved Principles of Hot Water, Steam, &c.

5 & 6, PHILPOT LANE,

LONDON, E.C.

Works: MARTIN STREET, STRATFORD, E.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER, at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails (wrought and cut), Copper and Zinc; Patent Locks of all descriptions, China, Glass, and Wood Furniture, of all kinds, with Patent Shank Spindles; Dr. Arnott's Ventilators 6*s.*; and the New Registered Venetian Ventilator, so much admired, 6*s.* 6*d.* each.

J. H. BOOBBYER (late STURCH & BOOBBYER), established nearly 300 years, for the supply of GOODS of the BEST MANUFACTURE at the LOWEST PRICE.

14, Stanhope-street, Newcastle-street, Strand, London, W.C.

PATENT WORCESTERSHIRE RANGE.

PRIZE MEDAL 1862. AWARDED FOR EXCELLENCE.

The above RANGE is most complete, and strongly recommended for its unrivalled ECONOMY, CLEANLINESS, CONVENIENCE, DURABILITY, and is a certain CURE for SMOKY CHIMNEYS.

It is an entirely new invention, and consists of large MEAT ROASTER, PARLY OVEN, and WROUGHT IRON BOILER. The top forms a HOT PLATE for BOILING, STEWING, &c. The whole heated by ONE SMALL FIRE. One 5 feet wide is equal to an ordinary Range 8 feet wide.

Extracted from the "London Daily Telegraph," May 19th, 1862.

"INTERNATIONAL EXHIBITION, Class 31.

"Of the most practical utility it should be said that Messrs JONES & ROWE'S Patent Worcestershire Range has attracted very special attention, and has been recommended by the Jurors in terms. A valuable feature of their Ranges is the placing of the OVEN and ROASTER one above the other instead of *side* by *side*; and ROASTER is constantly replenished with fuel."

INVENTORS AND MANUFACTURERS,

JONES & ROWE, WORCESTER,

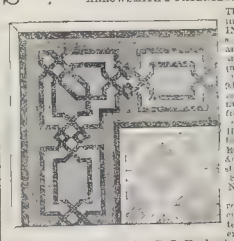
Designs and Estimates submitted.

PARQUETS SOLIDAIRES.—HOWARD & SONS, 25 and 27, Berners-street, are prepared to supply machine made patented solid PARQUET FLOOR—25 per cent. cheaper than they have been yet offered.—Illustrated Catalogues, plans, and estimates free.

PARQUET FLOORING.



TO ARCHITECTS AND BUILDERS

JACKSON & GRAHAM

Are the sole Agents in England for the superior PARQUET FLOORINGS manufactured by ANTON BEMBE, of MAYENCE & COLOGNE, for which a prize medal was awarded in the International Exhibition of 1862.—Boxes of designs sent free by post. No charge for taking plans and giving estimates.

33, 34, 35, 37, and 38, OXFORD STREET, LONDON

SOLID PARQUET FLOORS.—ARROWSMITH'S PATENTED.

The specialty consists in the SOLID INCH THICK [illegible] in separate pieces of wood and tongue [illegible] and edged all round [illegible] in precisely the same manner as the ordinary Parquet Flooring [illegible] per foot. The wood is [illegible] Oak, Teak, Walnut and other Woods, from 1*s.* 6*d.* to 3*s.* per foot Super. Quantities for Halls, Libraries, Billiard and Reception Rooms, Mansions, Public Buildings, &c. (Warmer than stone) SHOW ROOMS—29, NEW BOND-ST. W. Reference to numerous Works as executed during the last ten years, for the eminent architects, Messrs. W. Burn, D. Brandon, P. C. Hardwick, A. Salvin, Sydney Smirke, G. G Scott, and others.

WILLIAM MULLER, Artists' Colourman, 62, High Holborn, London

Drawing Paper, Tracing Paper, Colours in Oil or Water, Drawing Instruments.

Lay Figures for Sale or Hire.

BATH STONE OF BEST QUALITY.

RANDELL & SAUNDERS, Quarrymen and Stone Merchants, Bath.

List of Prices at the Quarries and Depôts, also Cost for Transit to any part of the United Kingdom, furnished on application to BATH STONE OFFICE, CORSHAM, WILTS.

BATH STONE OF THE BEST QUALITY.

PICTOR & SONS, Quarry Proprietors and Stone Merchants, Bath.

Lists of Prices at the Quarries and Depôts, also Cost of Transit to all parts of the Kingdom, forwarded on application to BATH FREESTONE WORKS, BOX, NEAR CHIPPENHAM, WILTS.

STATUARY AND OTHER MARBLE CHIMNEYPIECES.

ARCHITECTS, BUILDERS, and MASONS will find at

W. WILLETT'S SHOW-ROOMS, MARYLEBONE ROAD, N.W.

OPPOSITE THE YORKSHIRE STINGO,

A LARGE ASSORTMENT of STATUARY & COLOURED MARBLES, also ENAMELLED SLATE, and STONE CHIMNEYPIECES, at Prices to command their Orders.

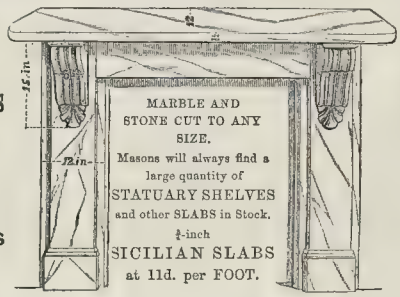
CARVED TRUSS STATUARY MARBLE CHIMNEYPIECE, FROM £6. AND UPWARDS.

ESTIMATES WILL MEET WITH PROMPT ATTENTION.

ARCHITECTS, BUILDERS, MERCHANTS, SHIPPERS, AND MASONS

Will find that the CHEAPEST HOUSE in LONDON for the following Goods is at the

EMPORIUM, J. W. BIRD & CO.'s, 143½ and 145, EUSTON ROAD, N.W.



BOX STONE CHIMNEY PIECES
for 5s. 6d.
Truss ditto ditto, 11s. 9d.

MONUMENTS AND TABLETS
in great variety, equally low in price.

MASONS' WORK OF ALL KINDS CONTRACTED FOR,
AND EXECUTED WITH DESPATCH IN TOWN OR COUNTRY.

A STOCK OF
500 CHIMNEY PIECES
always to choose from.

PRICE LIST ON APPLICATION.

MARBLE BOX CHIMNEY PIECE
for £1 5s.
First-class Bed-room ditto, £1 10s.

FIRST-CLASS
TRUSS MARBLE CHIMNEY PIECES
from £2 5s. to £3 5s.

A WELL-CARVED
STATUARY CHIMNEY PIECE
with 13½-inch Piers,
suitable for a Drawing-room, which must be seen to be believed,
FOR THE SUM OF £6.
Net Prompt Cash.

PRICE LIST ON APPLICATION.

VIEILLE MONTAGNE ZINC.

THE ITALIAN-FORMED ZINC is much approved of by Architects and Engineers on account of its strength, durability, and appearance. On account of the light framing required, roofs, including framework and fixing, can be covered with it FOR £3 PER SQUARE up to 25 feet span. Sheds of larger span, including posts, 4*l.* per square. Architects are cautioned against allowing anything thinner than No. 13 gauge (20 oz.) to be used. ALL PLATES SHOULD BE REJECTED NOT BEARING, in addition to the Company's name, the words "ROOFING ZINC," and the gauge.

OLD ZINC RETAKEN AT HALF THE MARKET PRICE OF NEW.

For Designs and Estimates for Roofs, with Timber or Iron Framework, IRON CHURCHES COVERED WITH ZINC, and Buildings for the Colonies, apply to

THE COMPANY'S SURVEYOR,
12, MANCHESTER BUILDINGS, WESTMINSTER, S.W.

JAMES W. TYLER, CONTRACTOR FOR
DEVAUX'S VIEILLE MONTAGNE THICK ZINC ROOFING,

ON IMPROVED PRINCIPLES.

12, ABINGDON STREET, and 4, WOOD STREET, WESTMINSTER, close to Victoria Tower.

Estimates furnished for every description of Zinc Roofing and Guttering, inclusive or exclusive of Timber or Iron Framing, in all parts of England.

Having for several years been actively employed in laying DEVAUX'S THICK ROOFING ZINC (the purest extant) upon the new principles introduced by Mr. Edmeston, Mr. TYLER can refer with confidence to work done as his best recommendation.

Good Zinc badly laid will still be a failure, for there is much more importance in the mode of laying than is yet generally known; and parties who will intrust their work to Mr. TYLER will find that this important point is thoroughly attended to, and at no extra cost.

This Zinc thus laid is quite as lasting as lead, if the woodwork is arranged according to Mr TYLER'S directions.

THE LAND SECURITIES COMPANY
(Limited).
Capital, 2,000,000*l.*

DIRECTORS.

The Right Hon the Lord Naas, M.P. President.

The Directors of the International Financial Society (Limited), acting as a Finance Committee.

John Ennis, esq. M.P.	Henry Farquhar, esq.

	John Horatio Lloyd, esq.
Sir John Charles Dalrymple Hay, Bart. M.P.	Hon. William Napier.
	Hon. Henry Petre.
Sir Lawrence Palk, Bart. M.P.	Sir Charles Rich, Bart.
Sir Henry Strachey, Bart. M.P.	Granville Richard Ryder, esq.
William Dargan, esq.	Philip Twells, esq.

OFFICES.—Chief Office, West End, 32, Charing-cross, S.W.; Branch Office, Office of International Financial Society, No. 60, Threadneedle street, E.C.

The Company will make advances, repayable with interest, at fixed terms, or by instalments, or by terminable annuities, upon the security:—

1st. Of landed estates, first-class house-property, and real property of all descriptions and tenures, and of all estates and interest therein.

2nd. Of rates, dues, assessments, and impositions of all descriptions, raised or imposed by or under the authority of any Act of Parliament, public or private, Royal Charter, Commissions of Sewers, Drainage, or other sufficient legal authority on the owners or occupiers of land.

3rd. Of charges and securities of all descriptions upon or affecting landed estate, and all real property and tenures, made, given, or issued, under the authority of any Act of Parliament, public or private.

For further information, and forms of application, apply to the Hon. WILLIAM NAPIER, Managing Director, the Land Securities Company (Limited), 32, Charing-cross, London, S.W.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT has been extensively used and

pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 42 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor.

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.

CROGGON and CO'S PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c. and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c. preventing the radiation of Heat, saving 25 per cent. of Fuel, and deadening Sound.

Samples, testimonials, and full instructions, on application to

CROGGON & CO. 2, DOWGATE HILL, LONDON; 2, GOREE PIAZZA, LIVERPOOL; And 59, GEORGE SQUARE, GLASGOW.

GILT BORDERINGS for ROOMS, from 1d. per foot. Best and Cheapest House in London for every description of Room Bordering, Picture Frame Mouldings, and Picture Frames of every description, at the very lowest prices. Re-gilding in all its branches to the trade. ¾-inch Gilt Beads, 7s. per dozen 6 feet lengths; best ditto, 12s.

GEORGE REES, 57, DRURY LANE.

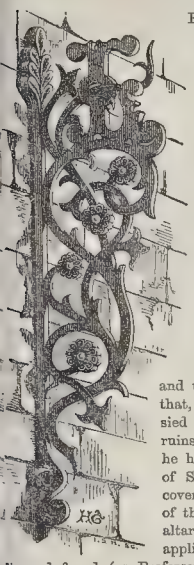
POLONCEAU and SEYSSEL ASPHALTE.

ESTABLISHED  1838



For covering Flat Roofs, Paving and Flooring of every description, especially in places subject to damp and vermin. This Asphalte is now extensively used for paving Stables (as shown above), the absence of joints preventing the generation of ammonia. For Estimates and Prices, &c. &c. apply to JOHN PILKINGTON, 15, Fish-street-hill, London, E.C.

Country Builders supplied with Asphalte in Bulk for covering Footings, Barn Floors, &c. with instructions to lay it down.

The Builder.

VOL. XXII.—No. 1129.

The Great Pyramid: Is it a Standard Measure Office?*

ET us suppose that Macaulay's celebrated but now somewhat hackneyed *protégé*, — the civilised New Zealander of some future age, — Astronomer Royal, perhaps, of one of the two great "sister isles" which were taken, once on a time, from his savage forefathers by a people not much more civilised,—had just arrived from Dun-Edin, *viâ* Egypt and the Pyramids; and that, after the prophesied rumination on the ruins of London Bridge, he had visited the ruins of St. Paul's; and discovering, in the midst of these ruins, a solitary altar, or a tomb, of stone, applied his foot-rule to it, and found (as Professor Greaves did with the "pyramid coffer," as Professor Smyth calls it) that "the hollow therein" was precisely "in length, on the west side, 6 ft. and 488 parts of the English foot, divided into a thousand parts; (that is [interjects Professor Smyth] 6 ft. and 488 of 1,000 parts of a foot;) in breadth,† at the north end, 2 ft. and 218 parts of the foot divided into 1,000 parts; (that is [interjects Professor Smyth,] 2 feet and 218 of 1,000 parts of the English foot;)" and so on; would the Dun-Edin professor be justified in concluding that *because* such a "coffer" would hold almost precisely four quarters, or a chaldron, of wheat, New Zealand measure; *therefore* the St. Paul's coffer was specially given, by divine inspiration, as a standard measure of capacity, for the use of all nations? Moreover, on finding that the foot-rule whereby the workmen who built St. Paul's must, as he conceived, have been guided in their measurements, was probably made up of a certain number of inches, each *nearly* (but not quite) of the same length with those of his own foot-rule, would he be justified in jumping at once to the conclusion that the architect of St. Paul's must have therefore intended, under divine inspiration, to *originate* the British inch, not only as a universal standard measure of length for the use thenceforth of all nations, but as the 500,000,000th part of the earth's polar axis?

If the New Zealand professor were to be so absurd a reasoner, then might he announce that St. Paul's had been from the first, and then still remained, a standard measure office, built under divine inspiration, for the use of all nations; and write an ingenious treatise, based on mensuration-run-mad principles, for the New Zealanders, on their "Inheritance in the Great St. Paul's."

This is truly what Professor Smyth, with great ingenuity, has done for the Great Pyramid. His views are not quite original, however; as he admittedly follows in the footsteps of Mr. John Taylor, whose no less curious book, titled "The Great Pyramid,—why was it built,—and who built it?" was reviewed in the *Builder* on 17th December, 1859 (to which we must here refer). Professor Smyth, however, out-Taylors even Taylor, and finds out a number of singular astronomical coincidences* in the angles of the passages, including even a reference to the shape and density of the earth in the rounded grooves and square granite block or portcullis in the vestibule or outer closet leading to the metric office where the corn measure stands.

Professor Smyth himself speaks of the many strange hypotheses which have been started to account for the certainly very strange and mysterious conformation of the Great Pyramid; but really his own hypothesis of a corn-measure office, though perhaps a natural suggestion, considering the celebrity of ancient Egypt as a corn country, does not appear to us to be much more probable than the preposterous one that this nearly solid mountain of masonry was Pharaoh's corn granary. By the way, did not Mr. Jopling intend to quiz such geometricans as Messrs. Taylor and Smyth with *his* hypothesis or theory of the coffer, and its "numerous definite and peculiar proportions," all "geometrically accurate," — so that "it was a treasure *chest* of science," based on "squares inscribed or to be inscribed in the circles of the human *eye*," as an invariable unit of length, whence, according to Professor Symth, "astonishing results were brought out, in the play of arithmetical numerations?" Was not all this just equivalent, in Mr. Jopling's estimation, to the vulgar saying, "It's all in my eye?"

How the strange hypothesis of Mr. Taylor and Professor Smyth arose we think we can pretty clearly see. The idea was not quite original, even on the part of Mr. Taylor. We shall not say that Hekekyan Bey, of Constantinople, C.E., in his work titled "The Chronology of the Siridiac Monuments," in which he alludes to the Great Pyramid "coffer," or coffin, as "*the King's Stone* [of power?] deposited by the *Arions* in the *sanctuary* of the *first* pyramid as a *record* of *their standard* metric system," was giving utterance to any old Eastern idea of the supposed meaning of the monolithic chest, that is (Scotticè) kist, in the sanctuary of the pyramid, because his work rather betrays, on the contrary, the influence of Western ideas on an Eastern mind; and, besides, his book was only published in 1863. But, in the celebrated "*Description de l'Egypte*," we find M. Jomard suggesting to other members of the French Academy, then in Egypt, that he even fancied that the lidless chest might have something to do with a standard measure of length; and hinting that he thought he had detected an analogy to the then new French mètre on one part of the coffer side. Even M. Jomard, however, was by no means the first who had dreamt of such a hypothesis. Sir Isaac Newton himself had dabbled a little in such notions, but had finally rejected them, although he did recognise, as was to be expected in so sagacious a mind, certain harmonious proportions of *a fixed measure of length*, which were very rigidly adhered to, in the formation of many of the pyramid's passages and chambers;—or, in other words, in short, he had recognised the traces of the ancient "foot-rule," as we may call it,—the cubit, or other measuring reed,—with which the builders and the architect or designer worked.

A still earlier astronomer than Sir Isaac, and who had purposely visited the pyramid, and taken great trouble to obtain accurate measurements of the kist or "monument of the king" in the "consecrated oratory," as he called it, and of the oratory or chamber itself, and other parts of the interior of the pyramid, had a special object in view relating to standard measures; but *his* purpose was simply to use the kist and oratory as well-protected and unalterable *reference* measures, whereby to fix, thenceforth and for all *future* time, the precise dimensions of the English foot-rule. That this was the object of John Greaves, Savilian Professor of Astronomy in Oxford, A.D. 1643, is evident from what he himself says in the *Pyramidographia*:—

> "I am of opinion that, as this pyramid hath stood 3,000 years almost, and is no whit decayed within, so it may continne many thousand years longer; and, therefore, that after-times, measuring these places by me assigned, may hereby find out the just dimensions of the *English* feet. Had some of the ancient mathematicians thought of this way, these times would not have been so much perplexed in discovering the measures of the Hebrews, Babylonians, Egyptians, Greeks, and other nations."

Greaves is the great authority both of Taylor and of Smyth; although, in "picking and choosing,"—from among the much less "alarming" than convenient list of variations of measurement given by many different visitors,—just what was suitable to the foregone conclusion,—even Greaves is not held to be immaculate. Taylor and Smyth's hypothesis of a divine metric office, however, appears really to be little else than an attempt to invoke divine aid, or rather the aid of religious or even superstitious feeling, in support of Greaves's very sensible object, by attributing to divine inspiration, in "a chosen race," of extreme antiquity, what was really a mere scientific inspiration, in an Oxford professor, of the seventeenth century.

But if this new hypothesis must go the way of all the others, is there no possibility of otherwise accounting for the certainly strange and mysterious conformation of the Great Pyramid? This we will say,—that if the mystery shall ever be revealed, this must be done through a consideration of the ancient practices and doctrines, as well as structures, of the ancient Egyptians themselves; aided, probably, by a like consideration of structures analogous or similar to the Egyptian pyramids, and of practices and doctrines connected with such structures, among other nations.

But what *are* the peculiarities of the Egyptian Pyramids, and especially of the Great Pyramid?

To whatever other purposes these pyramids (perhaps the Great Pyramid excepted) may have been originally devoted,—at least in their first design,—we believe there can be no doubt that they were used for the burial of kings or other great persons. Generally speaking, they were built of solid masonry, with comparatively little open space in their interior: indeed, *a long low narrow passage, or "transe," leading downwards to a subterranean chamber, in which was a sarcophagus, or stone coffin, occupied by a mummy, and covered by a ponderous lid, cemented down,* may be said to have essentially constituted the entire arrangement. As for the Great Pyramid, however, there is this peculiarity, that, while it possesses the *descending* passage and the subterranean or sepulchral chamber, another and *ascending* passage strikes off out of the descending one, far short of its sepulchral issue; and, after opening up suddenly into a still ascending or sloping and magnificent gallery, of great height, ends in the vestibule or outer chamber leading to the hall, or large and well-ventilated apartment, in which stands the "open chest without a lid," which has so often been visited and described. This

---

* "Our Inheritance in the Great Pyramid." By Professor C. Piazzi Smyth, F.R.SS. L. & E.; Astronomer Royal for Scotland. London: Strahan & Co. 1864.

† Notwithstanding the excessive care and accuracy of the author, in his anxiety not to be here mistaken or misunderstood, he puts his semicolon not, where it ought to be, at the word *parts*, but at the word *breadth*, leaving not even a comma at *parts*; and thus making mere nonsense both of Greaves's words and of his own.

* There appears to be no doubt that the orientation of the pyramid is correct; and it is even supposed that the angle of the passage into the interior, together with the angle of the northern air-channel, point out correctly the position of the axis of the earth with reference to the pole star of the time of the pyramid's construction. The reference to the air-channel, however, which it is impossible to see through, casts a doubt upon this so far as it is concerned, and had there been such purpose in view, would not the mean position of the pole star of the time have been marked in some way? We do not insist upon this point, however: those capable of placing a building due north and south, were certainly capable of pointing to the pole-star of the time at which it was erected.

chest, or kist, then, "the one only thing in the pyramid's huge entrails," as Sandys has it, is the evident analogue of the subterranean sarcophagus or coffin of the other pyramids; but it is without a sign of ever having had a lid, and is the sole occupant of a splendid hall of polished granite, 34 ft. 3 in. long, 17 ft. 1 in. broad, 19 ft. 1 in. high, and placed 138 ft. up from the ground-base of the pyramid on the rock; beneath which base, still 90 ft. 8 in. further down, is the subterranean or sepulchral chamber. The King's-hall, moreover, is most skilfully and thoroughly well ventilated by two air channels, running upwards, one to the northern surface of the pyramid, 233 ft. long, and the other to the southern, 174 ft. long; so that the chamber is regarded as one *much more likely to have been used by the living than by the dead.* Still, the likeness to the other pyramids might lead us to consider it merely as the abode of that *death* on which the Egyptians were ever meditating, were it not that there are historical records, such as that of Diodorus, that it never was used for burial; and there are no traces of grooves, catch-pins, or other fastenings for a lid, nor of any process of cementation, whereby the lid of a sarcophagus was as usual fastened down.*

If this noble apartment never was the abode of death, however, it must undoubtedly have been used for an *analogous* purpose; and, considering the known practices of magicians, such as the ancient Egyptian hierophants were, the very obvious purpose of using it in that *similitude of death*—the oracular entrancement of initiation—(in those "*dead* in the flesh but *quickened* by the spirit," in fact), which they are known to have practised in what was called "the temple sleep," and "the blessed life of the gods," at once presents itself. This similitude of death was the *psychopompos*, or "death in a higher sense," which they ascribed to their Hermetic or Mercurial god. The death of "the pit of corruption" beneath, was thus probably contrasted with the holy death of the god-possessed hierophants above; and, in the attainment of the higher state, or the "exchange of this life for the blessed life of the gods," as Iamblichus, on the Egyptian Mysteries, describes it, the novitiates incurred certain obstacles and terrors of darkness and light, and ran certain risks of falling into the pit, or of otherwise ending their career far short of the high and grand ulterior object which the Hierophants had in view.

But do we find anything similar to such magical structures and practices amongst other nations? Unquestionably we do.

The Mithraic cavern, or cell, of the Cabiri, according to Faber, though sometimes subterraneous, also sometimes lay concealed in the centre of enormous buildings of the pyramidal form; or, as in the tower of Belus at Babylon, in a *temple* at the top of the pyramid, with a *shrine* at the bottom. The temple of Belus, which was reached by a winding passage round the pyramid, stood exactly in such a position as the temple of Buddha now does in modern Chaityas in Ava and Siam,—at the top of *seven* stories. Like the Great Pyramid itself, the tower of Belus, at that great centre of sorcery or magical practices, Babylon, has been erroneously supposed to have been devoted to astronomy. That is quite inconsistent with what Herodotus tells us of it. He says that the *temple* above the *shrine*—the *apartment* for the *living*, in fact, above the *tomb* of the *dead*—contained a golden table and an elegant bedstead (like the "beautiful couch" of the Egyptian god-possessed); and that a chosen priestess lay upon the bed and was there visited by the god Belus (or Baal), by night, which obviously means that the priestess became god-possessed, in this "high-place of Baal,"—this *temple* of the *pyramid*, -by night, through entrancement, as an oracle, whose responses, while in "holy rest," or (Buddhist) "repose,"† were probably written down, as Sibyline leaves, at the golden table.

Pyramidal barrows, with temples at the top which were called "the *house* of the *god*," are common even in America; and such barrows, though without the outward temple, are scattered all over Asia and Europe, and are to be found even in this country and in Ireland. Such is the immense one at New Grange, which has one known and curious central chamber, or sorcery-hall, as the similar one at Maeshowe is runically inscribed. This central hall is, in all cases, reached by a long, low, narrow passage, or transe, just such as that of the Egyptian pyramids. The plan of the central chamber, or sorcery-hall, at New Grange, is cruciform; and at one side is a rude stone "bason," as it has been called, on the earth, with an inscription (in Ogham or in Runic characters) which has been translated as,—"The *tomb* of the hero;" (the abode of the *dead*;) while at the other side of the cross is another stone "bason," standing—not on the earth, but—on the rock of the site, with an inscription which has been translated as—"the *house* of the god" (the abode of the *living* god). The chamber is dedicated "to the Great Mother, Ops." *

That the Great Pyramid was a temple,—or rather, contained a temple,—seems to have been a very general idea; and even Professor Smyth himself calls it a temple. A section of the "consecrated oratory," as Greaves calls the high chamber, or sorcery hall, has, together with its outer apartment, all the appearance of a section of an Egyptian temple; and the inner chamber has been even called the sanctuary, as well as the oratory. On the supposition that the lowest chamber in the subterranean was devoted to death, and the highest to life in the "similitude of death,"—or, to god-possession, or the oracle, in entrancement,—it is probable that the middle chamber, between these two, had some relationship to that other similitude and "brother" of death which is neither the accursed death of corruption nor the holy and blessed death of entrancement, but the natural and daily death of sleep, the "brother" both of death, on the one hand, and of entrancement, on the other.

Keeping in view the *deathlessness* to which the god-possessed aspired, as among the Druidical "deathless brotherhood," the Greek and other immortal gods,† and the Buddhist undecaying illuminati in the "salvation" of Nirvana;‡ the conclusion, as to the origin of the Great Pyramid, to which Professor Smyth comes, from a consideration of historical records, is rather remarkable.

The "Hyksos," or "Shepherd Kings," were an historical race, who invaded Egypt as conquerors at a period of extreme antiquity,—long before the sojourn of the Israelites in Egypt. Manetho, who lived some centuries after Herodotus, says of these Hyksos,—"There came up from the east, in a strange manner, men of an ignoble race, who had the confidence to invade our country, and easily subdued it by their [magical ?] power, without a battle;" and, after several reigns, they capitulated with a valorous Egyptian monarch, and left the country "quietly, and entirely, with all their people and goods; and did so leave it going by way of the Desert, towards Syria, *where they built Jerusalem.*" That these Hyksos were not the Israelites is evident, not only from what Manetho says of their invasion, but also from his separate and subsequent allusion to the Israelites. Still, they would appear to have been of a kindred race; and Professor Smyth ingeniously suggests that that most mysterious character, Melchizedec, King of *Salem* [or *Jerusalem ?*], King of Peace and Righteousness, to whom Abram did obeisance as to his superior, and who was a high priest of the "order" to which, according to St. Paul,* even Jesus himself belonged, was probably the very king who invaded Egypt, and built the Great Pyramid as one of those grievous tasks to which the Hyksos put the Egyptians. And accordingly, Professor Smyth finds allusions to the pyramidal form in scriptural passages such as those which refer to Jesus Christ as the head stone of the corner, the chief corner stone, and "the head stone of the great mountain." That the Great Pyramid was not designed (though it was built) by the Egyptians themselves, Professor Smyth concludes not only from the utter want in this pyramid of those hieroglyphics of which the Egyptians were (afterwards ?) so fond, but also from what Herodotus says of its immediate directors or orderers, that they were hated by the native Egyptians.

Now the origination of the pyramidal form in Egypt from the farther east would be quite in accordance with the numerous traces of the spread of such structures westwards even from India, whence it is probable also that the Egyptian doctrines emanated; and, in reference to "the deathless brotherhood" who constructed and used such pyramids or barrows for religious purposes, or as sorcery halls, in this country,—or at least in Ireland and in Orkney,—it is a notable circumstance, of which Professor Smyth takes no account, that it is said of the mysterious Melchizedec, King of Salem, or Jeru-salem, that he had "the power of an endless life;"‡ or was, in fact, of "the order" of that "deathless brotherhood" of eternity, and children of "the divine mother,"—"children of the light,"—"children of the evening," as with the Druids,—or initiated and immortal brothers, as with the Nocturnal Society (Societas Noctis) of more classical times;—and hence (being a *new man* and also a God, or a son of God‡) he was "without [natural] father or mother." To this "deathless brotherhood" of "the order of Melchizedec," as we have said, even Jesus of Nazareth, the Son of God, *par excellence*, belonged.

* On this question see also review of Taylor's work in *Builder* of 17th December, 1859.

† See *Builder* of 16th October, 1858, on Wing Symbols.

* For further remarks on this subject, see letter by J. E. Dove, "On Wing and other Symbols," in *Builder* of 16th October, 1858.

† Science, genius, and *immortality* were said to be the fruits of initiation into the mysteries of the Greek Ceres and the Egyptian Isis;—not so much the fruits of the mere initiation into the life of entrancement, or "life of the gods," however, as of the continued and daily or nightly practice of that life, or the "often exchanging this life for the blessed life of the gods," as Iamblichus expresses it. Thus initiation was merely the initiative; and it was this initiative through which Triptolemus, or Demophōōn, was said by Homer to be passing when the divine mother, Ceres, or Isis, was interrupted, by the terror of his natural mother, during the goddess's immortalizing work upon her son's dying body, every night, upon his bed, in her temple, at his father's house. Under the divine influence of the goddess, as Homer's hymn, "In Cererem," has it, the novitiate (of the *second birth*, or *Child* of "the Great *Mother*,"—

> Grew like an offspring of ethereal race:
> Health crown'd his frame and beauty deck'd his face:
> No mortal food he ate: the Queen, adored,
> Around him oft ambrosial odours pour'd.
> *Oft* as the *child* was *on her bosom* laid,
> She *heavenly influence to his soul* convey'd.
> *At night*, to purge from earthly dross his frame
> She *kindled* on the earth the *unconsuming Flame*;
> And, like a brand, unmark'd by human view,
> *Amid the Fire*, wide blazing, *frequent* threw
> The *unconscious* Child: his parents wond'ring trace
> Something *divine*,—a more than mortal grace,—
> *Shine* in his form,—

until "one fatal night," when his mother saw "Consuming Flames around his body roll," and then "Wrath seized the goddess," and she,—

> Furious thus began: Oh, mortals vain!
> Whose folly counteracts what Gods ordain:
> Who, lost in error's maze, will never know,
> *Approaching blessings* from impending woe!
> Long, for the rashness that thy Soul possess'd,
> Shall keen reflexion agonize thy breast;
> For, by that oath which binds the powers supreme,
> I swear;—by sable Styx—infernal stream;—
> Else, had thy son, *in Youth's perpetual prime*,
> *Shared heavenly joys*, and mock'd the rage of Time.
> But now 'tis past! from fate he cannot fly:
> Man's common lot is his: he breathes to die.

MODERN SCULPTURE IN FLORENCE.

ONE interesting circumstance to be observed in the modern sculpture of Florence is the reality and progressive excellence manifest in the superior character of recent as compared with earlier works. Though this school was, unhappily, deprived by death, a few years ago, of its most esteemed master, Bartolini, it owns, among the living, representatives who may be allowed very high places, and who have produced creations scarcely surpassed by anything of recent origin in Italian art. Fedi, Dupre, Santarelli, may not be considered equal, as artists, to Tenerani or Benzoni, but the finest achievements of the Florentines might vie with many of those most admired among works by their contemporary competitors at Rome. In portrait-statuary we know of nothing finer than Bartolini's "Machiavelli," the last-erected of the twenty-eight statues of Tuscan celebrities in niches along Vasari's portico under the Uffigi: a figure, indeed, wonderful for individuality and calm concentrated thought, conveyed with the noblest simplicity of treatment. The sainted Archbishop of Florence, Antoninus, in the same series, also does great credit to its artist, Fedi. Most admirable of the works to be classed with novelties, and yet to be seen only in the studios of sculptors here, is one that has received a high tribute from public opinion, having been (much to the honour of Florentine citizens) purchased by popular subscription to fill an illustrious place in the majestic loggia of Orcagna, and consequently be associated with the bronzes of Cellini and Donatello, with the marble grouping of Giovanni Bologna, and (we might also say) with the proximate "David" of Buonarotti, the "Hercules" of Randinelli, as well as with the fine old architecture of the Palazzo Vecchio. Such the destination of the colossal group by Fedi (expected to reach completeness within about six months) of "Pyrrhus and Polyxena," the tragic moment represented being that when the

* Hebrews, v. 6.

† Hebrews, vii.

‡ "As many as are led by the Spirit of God, *they* are the Sons of God."

fierce conqueror seizes the Trojan virgin, to sacrifice her on the tomb of Achilles, in order thus to appease the Manes of him she was to have wedded, while Hecuba, prostrate before the haughty warrior, in vain intercedes for her hapless child,—a subject purely painful and horrific, illustrating all that is darkest in superstition and most hatefully ferocious in war, only capable of being rendered poetic or impressive through such treatment as the artist has triumphantly attained, by investing the personages with ideal beauty of so high an order, and so ennobling the action by vigour and grace, the expression by power and pathos, that the moral odiousness of that action itself is lost sight of, admiration and astonishment subduing every other emotion as we look on this masterly creation. By the same artist is a statue, ordered by royalty, of "Tuscan Civilization," personified as a female, of majestic, but rather too proudly self-conscious aspect; and we may dwell with more pleasure on his group of "Love consoling the Soul," allegorized as Cupid welcoming to life and joy the reanimated Psyche,—a truly poetic and finely conceived composition. By Pazzi (a native of Ravenna), is the colossal "Dante," for the monument to be inaugurated on the piazza before Sta. Croce, during the celebrations of the tercentenary festival, next May. Nearly completed in the marble, this statue represents the great poet erect, stepping forward, as in slow and stately and suddenly arrested movement, the laurel crown on his head, an eagle beside his feet, the draperies falling in ample folds well disposed around the person; the expression, conveyed with much skill and truthfulness, that of profound thought and lofty feeling in which indignation predominates over other attributes, still living, though retiring and subdued. The sentiment of this fine statue reminds us of Byron's "Prophecy of Dante," not in respect to any particular passage, but the general tone, the pervading emotion of that magnificent poem. Dupre is now finishing his reliefs for the tympana of the portals of Sta. Croce, the "Invention," and "Elevation of the Cross," both treated with a largeness of conception and imaginative power that approach the epic in character; and particularly impressive is the assembly of the great, the gifted, and saintly ones — Charlemagne, Constantine, Dante, St. Thomas Aquinas, females of the New Testament, and others—united with angels to worship before the sign of Redemption. The "Mater Dolorosa," by the same artist, already in its place under a canopy above the chief portal, is a figure marked by all the dignity of sorrow tempered by the tenderness of resignation. A large monument, lately erected in a chapel at S. Lorenzo, has been much spoken of, and often admired in the studio before its transfer—certainly one of Dupre's most beautifully-finished works,—the memorial of a wife cut off by early death, a Polish lady whose widower is the Commendatore Ferrari Corelli. The principal group, above a sarcophagus, representing the deceased borne away by an angel who clasps her with one arm, and is soaring with her from the ground, so that, through a difficult technical achievement, both figures appear detached, the feet of neither having any apparent support, the draperies alone resting on the sarcophagus. Below, laterally, stand the figures of two females, alike graceful and distinguished by serene loveliness, one in the act of giving food to a little naked boy,—these being the personified virtues of the deceased, Modesty and Charity. Other statues of children, very pleasing and naïve, hold up draperies over the archway that surmounts this monument. We have only to object that the group of the angel and lady is conceived too like a scene of earthly love, wanting religious dignity, and altogether reminding, but too naturally, of a romantic *enlèvement*. Dupre's "Sappho," much admired at the National Italian Exhibition in 1861, is still (we are surprised to see) in his studio, and uncommissioned. Santarelli is finishing in the marble a "Corinne," in act of improvising, seated, with her lyre in one hand, not striking that instrument, but looking upward in earnest expectancy and rapture; a melancholy enthusiasm, appropriate indeed to the subject, the distinguishing expression of this statue, which has not, however, sufficient intellectual fervour to remind us of Madame de Staël's heroine. "St. Francis" (colossal), with the cross in one hand, calling down the Divine benediction on his first followers, is another vigorous and original statue, now to be seen in the same studio, and destined to stand in the open air within the Franciscan cloisters of the Ognissanti church. In figures of children Santarelli is happy and truthful, as evinced in recent works—the youthful "St. John;" "Cupid tormenting the Soul," in form a butterfly, which he wounds with his arrow; "Innocence Endangered," a young girl (beyond childhood, indeed), to whose feet a serpent is approaching through the flowers among which she sits, with an open rose in her hand—a subject too painful, for it seems the Innocence that is about to be inevitably lost. Costoli is executing a monument to Madame Catalani, to be placed in the Campo Santo of Pisa—the composition including figures of St. Cecilia, Indigence (why here introduced?), and an angel: the saintly patroness of Music standing alone on a basement, her form and action graceful, dignified: the angel seated below, on one side, writing a record of the virtues of the dead; Indigence, a female, seated at the other side; on the front a portrait-relief of the celebrated songstress from a bust, plain but expressive. This artist competed for the monument to Columbus, erected last year at Genoa; not successfully, but the design he presented has so far obtained suffrages in private, that three reproductions of his group, "Columbus, with the personified Quarters of the World," have been ordered for America. His relief of Columbus planting the cross after landing, surrounded by his comrades and by native Indians, was accepted, and is now one of the sculptures adorning the quadrate basement of that monument, for which Freccia executed the principal figure, and Santarelli the figure of Fortitude, one of the colossal personifications introduced around that central object. In the relief by Costoli, the principal figure is least satisfying, indeed undignified; the others, more ably treated. We believe that general consent must assign to Fedi and Dupre decidedly the highest ranks among living Tuscan sculptors.

MURRAY'S HANDBOOK TO PARIS.*

MR. MURRAY'S services to travellers have been so great, and his Handbook for France is so valuable as a book of reference as well as a guide, that his Handbook for Paris, some years announced as in preparation, and which has just appeared, will command an extensive circulation, which the utility of the work will justify. It is not, however, so decidedly superior to several recent guide-books as might have been anticipated; though it has certain advantages in portability, and in arrangement for reference. It is assuredly inferior to the smaller Handbook for London, particularly through not having type-diagram plans such as formed an especial and excellent feature in that work, indicating the exact position of objects of interest. We have heretofore given some attention to principles of the compilation of travellers' guides; and we are glad to notice Mr. Murray's efforts to reduce the bulk of his volumes. This reduction, merely, preserving the necessary information, could scarcely go farther with advantage, than in the volume which is before us; but we are inclined to think that abbreviation and excision of words, and tabulation, as after the system of the section headed "Palaces and Objects of General Interest," wherein the objects interesting to the architect are divided (not always correctly, however,) into the heads Roman, Gothic, Renaissance, &c., and of that headed "History," which is in the form of a chronological table, might have been made more use of, so as to have allowed room for other matter. The general alphabetical arrangement, which is that of the volume, has not the advantage over the arrangement in routes, with a good index, and a reference list of streets also supplied, that might be supposed without actual experience. Suppose the visitor to be walking along any street, he will come to some building of striking appearance, but which has not its name written upon it. Unless he can inquire of a passenger, which often he will not be able to do, the Handbook will be useless at the time. His only chance will be to note the name of the street, and the number of the building,—fortunately visible in Paris on public building as on private house,—and as ought to be the case in London; and, when he gets back to his hotel, he may turn out in Didot, the name for which he should be able to look in the Handbook. Of guide-books yet published, none quite meet this difficulty. Those which adopt the itinerary might well take a hint from the typographic arrangement with conspicuous headings, of the alphabetical plan as we find it in Mr. Murray's volume. We have not seen the last edition of Galignani's Paris Guide; however, judging from that which preceded it, even with the bulk, and the occasional diffuseness, that work is not less necessary than it was. We have had occasion to make much use not only of those portions of it which describe the various objects of interest, but also the portion giving the statistical and general information. The intellectual advantages to be derived from travel, and the too general blindness and presumption of our countrymen when abroad, have been fittingly spoken of in more than one of Mr. Murray's Handbooks. In one of the earliest, we find, to the point in question, an extract from the *Quarterly Review*, wherein is quoted Johnson's saying that "A man must carry knowledge with him, if he would bring home knowledge." To that end, in our thinking, the visitor to such a place as Paris should find in his guide-book, either the general information which may be necessary to his appreciation of the great subject, which is more than that of "sights," or find at least the direction where to gather the information. The manner of visiting the French capital, along with the appreciation of a great nation which is evinced, by the large majority of our countrymen, simply fills us with shame. It is no defence, or proper excuse, to say that Frenchmen also have "the idea of the amazing superiority" of their own country "above all other countries, in all respects," similar to that which the Handbook just now quoted from, ascribed to ourselves. Like the Turks who have been to Europe, and return more bigoted and narrow-minded Turks than before (though we have known exceptions), our travellers, the majority of them, speaking not sufficient of any foreign language to learn anything thereby, and more than ever bent on getting over the ground, return not with prejudices removed but confirmed. Too many of the "excursionists" are of this class; and their demeanour in the streets of Paris is often not what a good patriot should desire. Such visitors require a portable guide; and, indeed, we want something of the portable and ready-reference kind for ourselves; but the better sort of travellers, our own readers, and those travellers who have most highly appreciated Mr. Murray's Handbooks, will desire something more than a dictionary of sights, and to "carry knowledge" of the country and the people "with" them, in order that they may "bring home knowledge." In the Handbook that is now before us, we must admit that there is under many of the separate headings, information of the kind that we desire to see, and altogether that the volume contains much of it. And the fact that there is ground, throughout the volume, for the assertion of the Preface, that "The notices of the different monuments and public establishments have been carefully brought down, from personal examination, to the present time," gives a certain value to the work as compared with some others. There are, however, rather more mistakes in the information, and of the press, than we expect to find in a second edition; and these errors seem to be exactly of the kind that, for our readers whom we advise to get the volume, we ought to point out. Some of them touch questions on which we have written. Thus, the Handbook gives the population of Paris as 1,696,141, "in May, 1863;" whereas, that was the population of 1861; to which, for 1862 alone, there should be added, judging from previous experience, the number 34,000. Our readers know how important is accuracy in such statistics, to right conclusions in some of the questions that are just now the most interesting for the visitor to Paris who is not a mere idler. The Handbook, similarly, misstates the figures of the births and deaths,—giving for 1863, those of 1862. The cattle-market spoken of as at Sceaux, is only called *Marché de Sceaux*: those who wish to visit it will find it on the road, at Bourg-la-Reine. When going east along the Boulevart St. Denis, the Boulevart de Strasbourg opens left only; the line to the right bears the name Boulevart de Sebastopol, which elsewhere in the Handbook is given to the whole line including the Boulevart de Strasbourg. The Arc du Carrousel should not be spoken of, without qualification, as in imitation of the arch of Severus: the resemblance is scarcely more than that between any two monuments of the Roman triumphal arch character, and having three

* "A Handbook for Visitors to Paris; containing a description of the most remarkable objects in Paris, with general advice and information for English Travellers in that Metropolis, and on the way to it. With Map and Plans. London: John Murray, Albemarle-street. 1864." 12mo., pp. iv. & 260.

openings; whilst the sculpture is original, and highly creditable to French art. We should certainly class the Madeleine as Roman, and not "Italian," and Ste. Clotilde not as Early Perpendicular. We do not think that the models and machines in the Conservatoire des Arts et Métiers include nothing "really interesting to the man of practical science or the general visitor:" we think rather that they abundantly justify the desire of all English men of science who have visited the Conservatoire, that we had something of the same kind in this country. The fortifications are not faced with brick, but stone. The remains of Napoleon *have* been placed in the tomb: they were placed there either in 1861, or the commencement of the year following. The sewers along the quays, and the outfall, spoken of as works for the future, have been some time in operation; though the whole system for the south side may be incomplete. M. Davioud is architect of the two theatres of the Place du Châtelet; and the *Folies Dramatiques* and the *Délassements Comiques* have disappeared from the Boulevart du Temple, and are elsewhere. The matter under the head "Army," in the Handbook, is very defective, even taking in Paris alone. We should be disposed to write down the one franc as the fraction which it is over "9½d.": the traveller may do well to call it 9½d.; but using a table where opposite some of the other denominations in French money, the minute fractions appear, he would be less confused with a self-consistent system. The maps and plans in the Handbook are not all so clearly engraved as they should be; the Parc de Vincennes appears neither as a separate plan, nor in that of Paris; and the latter plan is scarcely such that "the stranger may dispense with any other," at least if there be one on sale in Paris,—as lately there was not, at least correct. As this plan is referred to throughout the Handbook, it should have been mounted, or printed on cloth, like most of Mr. Murray's maps. And there are not only omissions in the plan, but there is such confusion between new lines of street, and old, as amounts to inaccuracy: in fact, some of the new lines are shown with buildings obstructing the route; though the lines are really open. We may observe that the scale appended, showing one mile the same as 1,600 *mètres*, may serve the purpose; but the fact that the mile is more by 9·3149 *mètres*, should have been stated. The Bièvre runs into the Seine, not out of it.

We have mentioned these inaccuracies in the work, and what we have considered to be some of the desiderata, with the hope of contributing to the production of a good as well as portable guide to Paris, and aiding that appreciation of what is interesting in the capital, and worthy of admiration in the French people, which we have referred to as in the spirit generally of the treatment of Mr. Murray's Handbooks. However, we could have easily found in this one of them, as many passages with the same bent, and claiming therefore our approval, as we have portions which seem defective or incomplete. The whole of the defects can be easily remedied; and even looking at the Handbook as it is, certainly we are disposed both to have it for reference, and to take it with us, as well as the better known, but more ponderous volume.

MASTER MASONS: EDWARD STRONG, &c.

My father possessed, and was proud of possessing, a copy of Small's "Treatise on Ploughs," carrying on its title-page, in a rough, free, manly hand, these memorable words, "Robert Burns, Poet." The book is now mine, and by its side stands a companion volume, precious in my eyes, of "Poems, chiefly in the Scottish Dialect. By Robert Burns;" on the title-page of which is written "Allan Cunningham, Mason, 6th April, 1804." My father was then in his twenty-first year. The writing is the handwriting of each. "Burns had an unmistakable right so to describe himself," my father once observed to me, on my calling his attention to the contrast in the descriptions. "There is no apprenticeship to poetry. I was apprenticed to a mason—to my brother James—and I am sure I am a mason, ay, a master-mason, and a good one:—when I was last in Edinburgh I could trace the marks of my chisel on many a stone in Charlotte-square. Yes," he added, after a pause, and with an air of pride, "and the stones were well and truly wrought."*

* The *Builder* has called attention to the Masons' Marks still existing upon stones squared centuries since.

Masons have been architects, and occasionally good ones (the York water-gate, on the Thames, has recently been taken from Inigo Jones, architect, and given to Nicholas Stone, mason); but there is no instance, I believe, of an architect *proper* having ever been a mason *proper*.

In the church of St. Peter, in the disfranchised borough of St. Alban's, is a large well-wrought monument of marble (and good marble, too) carrying beneath a life-sized bust of the deceased (sculptor unknown) this suggestive inscription:—

"Near to this stone are deposited the Remains
of
EDWARD STRONG,
Citizen and Mason, of London,
whose masterly Abilities and Skill in his Profession the many public structures he
was employed in raising will most justly
manifest to Posterity.
In erecting the edifice of St. Paul's several years
of his life were spent, even from its
foundation to his laying the last stone.
And herein,
equally with its ingenious Architect,
Sir Christopher Wren,
and its truly pious Diocesan, Bishop Compton,
he shared the felicity of seeing both the
beginning and finishing of that stupendous
Fabric.
In piety to his God, in justice, fidelity, kindness,
and charity to his neighbour;
In temperance, humility, contempt of the
world, and the due government of all
his appetites and passions;
In conjugal and paternal affection, in every
relation, every action,
and scene of life, He was what the best man,
the best Christian,
would desire to be at the hour of Death.
He Died the 8th of February, MDCCXXIII.,
In the 72nd year of his Age.

Near Him lieth
Martha,
49 years his most beloved Wife:
A Wife in all respects worthy of such an Husband.
She Died
Ye 15th of June, 1725, aged 72 years."

Their only Daughter,
Elizabeth New, of Newbarns, Widow,
died 26th October, 1747, aged 71 years.

The bust *seems* a fine one. I say seems; for, shame to say, the monument is *now* buried beneath a cumbrous west end gallery at a distance of some five-and-twenty feet from the spectator; so that the chin, mouth, and nostrils of Sir Christopher Wren's Master Mason at St. Paul's, "from its foundation to his laying the last stone," are alone seen.

I had the pleasure of seeing (half-seeing, rather) this fine monument in company with a skilled Master Mason—an old Pimlico acquaintance of mine from boyhood—Mr. Samuel Cundy. Need I tell you how much we joined in a mutual regret that a monument in every way so interesting should be thus buried? A small sum, he said, would cover the cost of moving it to a better site in the church, and it would then be once more a monument to be seen and admired. Perhaps the *Builder*, for so good a purpose, would undertake to receive subscriptions from one and all towards so good an end. I will vouch for obtaining the consent of the worthy vicar, the Rev. H. N. Dudding; and to see that men of skill and care (I was almost born in Chantrey's marble-yard) remove it with reverence to a proper site. There are masons, I may here observe, busy in replacing the compo-covered Perpendicular tracery of the south-west windows of the church with well-wrought stone; so that skilled men are at hand to effect what is necessary. Nor do I doubt of seeing it soon and well done, with your all-influential assistance, Mr. *Builder*.

The fate of monuments erected to English architects has been a little unfortunate. The monument to Inigo Jones, in the church of St. Benet, Paul's Wharf, was destroyed in the Great Fire, and the tomb-stone of Nicholas Hawksmoor (Wren's celebrated pupil) is to be seen in the churchyard of Shenley, shamefully broken in the middle, and its inscription scarcely legible.

The sister art of Sculpture, whatever she may have done or overdone in aid of Architecture, has done little for architects. Wren has a cheap "*circumspice*" in St. Paul's; Vanbrugh lies in the vaults of St. Stephen's, Walbrook, *without* a monument; Gibbs reposes not in his own fine church of St. Martin's, but in the little brick-built church of old Marylebone, with a stone-cutter's slab to record the circumstance. Kent and Lord Burlington sleep together in Chiswick Church, each without a monument; Sir William Chambers has a blue leger in the south transept of Westminster Abbey; and Sir Charles Barry a *bastard* brass in its nave. Painters and sculptors have fared better, though Sir Peter Lely's monumental bust, by Grinling Gibbons, perished in the fire that destroyed Covent Garden Church; Cooper, that prince of miniature-painters, has a monument in old St. Pancras; Sir Godfrey Kneller has a monument and bust in Westminster Abbey; Reynolds has a statue (by Flaxman) in St. Paul's; and Flaxman a statue (by Watson) in London University.

Another person of the name of Strong (Thomas Strong) was employed in rebuilding St. Paul's, under Wren. His prices deserve quotation and may challenge comparison with the prices of to-day:—

"For plain Portland stone-work, of the pilasters and rustics, window-jambs, architraves, and bosks, sixteen-pence halfpenny per foot.

For carving faces of impost capitals, 6*l.* each; panels with flowers and enrichments, 3*l.* 5*s.* each; escalops in the heads of the outside niches, 3*l.* 10*s.*

Two large compartments and festoons, each 12 ft. in length, 45*l.*; seventy-five great flowers, in the soffits of the five windows at the west end, 15*s.* each; and sixty smaller, 5*s.* each.

Pendant strings, 3 ft. 9 in. in length, and 1 ft. in breadth, 5*l.* each.

Cherubim, 10*s.*; flowers in the architrave, 9*s.* each.

Four festoons, over the two straight windows at the east end, 20*l.* each.

Six festoons, over the three circular windows at the east end, 20*l.* each.

Five cherubim, on the key-stones of the five east windows, at 13*l.* each key-stone.

Three shields, each 3 ft. high and 4 ft. wide, 7*l.* each."

Is a Portland stone cherubim cheap at twenty shillings? I would ask a classic-church-architect, if such a rarity can be found in Gothic England at this day.

The dislike which *Radcliffe Library* Gibbs showed on all occasions to monuments in churches is curiously exhibited in his finely proportioned church of St. Martin's-in-the-Fields. The curious monuments in the patched-and-added-to little church he was *required* to replace, he either destroyed or banished to a Siberian cellar or Cimmerian gloom underneath his own noble new building. The monuments to the celebrated sculptors, who called Inigo friend, and rendered Inigo good *masonic* service,—Nicholas Stone and his son,—he destroyed or sold with a savage fidelity to the rules he laid down. As a proof of his rigid adherence to his rules, in the vaults of the present building may still be *found* (I cannot say seen) the monument (the bust finely coloured to the life) of Sir Theodore Mayerne, the famous physician, with whom Rubens and Vandyck loved to talk touching the composition and duration of the pigments they should employ to resist the hand of Time. And here, by way of a Montaigne ramble, allow me to suggest that the authorities of St. Martin's might be asked to make a present of Sir Theodore to the neighbouring College of Physicians. They recently suffered all that remains of flesh and bone of the great John Hunter to be removed to St. Paul's; and Her Majesty, to gratify the Scottish nation, has recently transferred the pictures of James III. and his queen from Hampton Court to Holyrood. There is royal precedent for it, and St. Martin's is a royal and loyal parish.

New Barns, in Hertfordshire, the house of Sir Christopher's master-mason at St. Paul's from the beginning even unto the end thereof, is a straggling-like structure, patched, vamped, and compoed since Strong lived in it, and almost defying description. It is most pleasantly situate on the banks of the Ver, has noble trees worthy of Longleat or Sion, and of rare character, planted by the master-mason himself, when he dropped the mason's trowel for the gardener's spade. The "trim gardens themselves" would receive critical commendation from a Loudon, a Lindley, or a Paxton. When I tell you (perhaps only remind you), that New Barns is the property and residence of Mrs. Worley, a wealthy and unworldly lady, and that Christ Church, St. Alban's, was built and endowed by her benevolence and munificence, the subscriptions I seek in aid of the Old Mortality task I undertake will not be without "a something," and something more from Mrs. Worley.

With the noble abbey we possess to inflame and inspire us; with the remembrances awakened by the ruins of Sopwell Nunnery,—they were

given to a master mason;—I do not doubt of success. Remember, the greatest individual subscriber to Sir Christopher's St. Paul's was a Hertfordshire lady. PETER CUNNINGHAM.*

THE FOURTEENTH MEETING OF GERMAN ARCHITECTS AND ENGINEERS.

THESE meetings have been held every two years since 1836, and that for 1864 has just taken place in Vienna, beginning on the 30th August, and lasting three days. Of these the first and last were the most important, the second being spent in excursions to the palaces and parks in the neighbourhood of the Austrian capital. On the 30th of August upwards of 1,400 gentlemen met at breakfast in the Volks Garten, after which they broke up into two sections, the architects proceeding to inspect what more immediately interested them, under the guidance of Professor v. Siccardsburg and Mr. Zettel, whilst the engineers were headed by Messrs. Rittinger & Rupert. The architects inspected the Heinrichshof, the Opera, several palaces, and a new bridge, now in course of construction, where the strangers were not a little surprised to find a number of women at work as labourers. The park and buildings of the Horticultural Society were next visited, and then the "Dom" of St. Stephen, to the restoration of which we have lately several times alluded. Some disappointment was felt at the amount of Renaissance and Rococo work which had been permitted to remain to disfigure the interior of this Gothic edifice, and a hope was very generally expressed that at no distant time these, too, would be removed. At eleven o'clock the Minister of Public Works, Freiherr v. Mecséry, Field Marshal v. Frank, and Freiherr v. Kalchberg as representative of the Board of Trade, received the guests, numbering 1392, in the saloons of the Imperial Redoute. The opening address was made by Herr v. Engerth, who commented upon the importance and advantage of these meetings, as conducive to the furtherance of the arts and to German unity, and spoke with much feeling of the careers of Förster, of Vienna, and Hübsch, of Carlsruhe. The meeting then divided into sections for the purpose of discussion, and the subjects proposed were,—Architecture, Civil Engineering, Machinery, and Heating and Ventilation. Chairmen having been chosen, the meeting repaired *en masse* to the Polytechnic Institute, where the visitors were received with great enthusiasm by the scholars, and then began the debates, which lasted until five o'clock. Next day a hundred omnibuses took the guests to the Imperial Summer Palace of Schönbrunn, where a banquet was provided by the city of Vienna. The last day was chiefly spent in debates in the various sections, in one of which Herr Kormarsch, from Hanover, advocated the introduction of the French mètre as a common measure, a proposition which found many supporters. At the close of the proceedings several cities were proposed as the place of meeting in 1866. Amongst these were Berlin, Potsdam, Frankfort, Dresden, Dantzig, Cologne, and Hamburg. The last of these was finally determined on, and the meeting separated, well pleased with what they had seen and heard, and with the reception they met in the city of the Kaisers.

CONTINENTAL NEWS.

Vienna.—On the occasion of the late meeting of German architects and engineers, an exhibition of designs and other drawings was arranged at the Polytechnic Institute. So great was the number of drawings contributed, that the walls of seventeen large lecture-rooms were hung with them, besides a number of models, &c., which were placed on tables.——Prince Alexander of Wirtemberg is causing a palace to be built, which promises to be a very imposing building. The ball-room is situate over the chief entrance, and goes through two stories. All other rooms are 20 ft. high.——The sculptor, Vincenz Pilz, has just completed the model of a statue of Prince Leichenstein, celebrated in history for raising the siege of Regensburg, which was besieged by the French. It is described as a very faithful likeness, and will be placed in the military museum in Vienna.

Teplitz. — The well-known Spa in Bohemia has just received a new and very large church. It is in the form of a basilica.

Prague.—The cathedral of Prague, dedicated to St. Vitus (Sanct Veit), is closed for restoration, and will probably remain so for the next three years, although the side chapels will be re-opened for mass, &c., as soon as the scaffolding is complete.

Salzburg.—A new Protestant church is about to be erected at Salzburg; the funds for this purpose will be chiefly derived from a lottery of works of art. 345 artists, from fifty different cities and towns in Germany, have sent in their contributions, which are now exhibited in the palace in Weimar.

Baden. — An interesting discovery has just been made here. Several years ago a hypocaust, evidently of Roman origin, was discovered, and was roofed in with oak boards and slate, and was and is one of the sights of the town for those who can tear themselves away from the seductions of M. Bénazet. A new roof had become necessary, and the old one was taken down, when an underground passage, about 100 ft. long, was discovered, leading under a building in the garden of the present convent of the Holy Sepulchre to a large chamber 160 ft. long, 50 ft. broad, but only 3 ft. high. The walls of this chamber are built in brick, and the space is almost filled with piers in brick, 15 in. apart, carrying flat thick tiles, which form the covering. The proximity to the hypocaust leads the Director of the Museum of Antiquities at Carlsruhe to suppose that the space just discovered formed the basement of a Roman house or villa, which has now entirely disappeared, and of which the hypocaust formed a part.

Mannheim. —The old king of Bavaria has presented the city with two statues, those of Iffland and von Dalberg. The former arrived about a fortnight ago, and was uncovered on the Schiller-platz, with some ceremony. One of Iffland's plays was performed in the evening.

Stuttgart.—The new market, ordered by the late king, is now completed. It encloses a space of 20,000 superficial feet, besides affording 6,000 superficial feet of cellarage, and is divided into a nave and two side aisles. The roofs are carried by sixty-four columns in four rows, the columns of the two inner rows having a height of 35 ft., including caps, whilst those of the side aisles measure 24 ft. The style is Renaissance, and Mr. Morlock, architect to the king, furnished the plans. The building will be formally opened shortly, on the occasion of the yearly Exhibition of Garden Produce and Implements.——Schaeffer, a local sculptor, has finished a bust of King Carl: it is said to be very like and well treated.

Madrid is about to erect a monument to Columbus. Better late than never. The municipality has voted 800,000 reals: the committee has subscribed a part; and the rest will be paid for by the State. The place selected is in the street De los Recoletos, opposite the Mint,—a very appropriate place, considering the wealth which Spain acquired by the discovery of the New World. A late decree confirms the committee, and gives them power to take the necessary steps.

Italy.—Rossini's statue was inaugurated at Pesano on the 21st of August. Mr. Peruzzi, the Minister of the Interior, made a speech in presence of an enormous crowd of spectators, after which Mercadante's Cantata was sung by 500 voices. Rossini's fear and dislike of railroads are well known; and it is curious that his new villa at Passy is close to the station, whilst his statue, which represents him comfortably seated in an arm-chair, has been erected opposite the station at Pesano.

VENDOR AND PURCHASER. — Vice-Chancellor Kindersley lately held, in the case of Poole *v.* Adams, that where a house under a contract for sale, having been insured against damage by fire, is burnt down after signing of the contract, but before completion of the purchase, the purchaser is not entitled to the benefit of the insurance, in the absence of any express stipulation to that effect contained in the agreement.

PARK PRECINCTS AND ESPLANADES.

As there is no city of Europe possessing within its bounds finer parks and reserves than the Hyde, Regent's, St. James's, Battersea, and Victoria, &c., there is none that is characterized by more miserable routes or esplanades *d'entourage*. Originally St. James's Park was so planned as to form a mall of four expansive routes, divided only by ranges of forest trees, planted open and at long intervals, and this has ever since been regarded as its chief distinction. Of late years Hyde Park has been intersected with carriage drives and rides of suitable width, running the whole circuit, as well as the extent from Hyde Park-corner, nearly a mile and a half, to Kensington. And now, to meet the growing occasions of an increased population and of greatly-extended public buildings, the Commissioners of Woods and Forests are forming most judiciously a grand route from the Houses of Parliament, along the Birdcage-walk, to Buckingham Palace: the whole interval between two rows of trees, nearly as wide as the Mall on the north side is being added to the old causeway;—one portion to form a carriage thoroughfare; the other alley, under the shade, to be reserved for the use of equestrians.

As this new route is at present demarcated, the exit would be out of the narrow gates at present giving issue into Pimlico, just opposite the Prince of Wales's office. The width of the new addition is 36 ft., which, added to 48 ft., the mean breadth of the old walk, will open a noble thoroughfare for increased traffic between Westminster Bridge and Buckingham Palace; but to complete the plan and establish an esplanade truly worthy of the situation and of our times, it ought to be continued over the wide arena opposite to Buckingham Palace, and thus, without violence to any existing plantation, be conducted by only slight curvatures into the continuous line of Constitution Hill.

For this purpose the comparatively narrow drive along the wall of Buckingham gardens, ought also to be widened to an extent assimilated to that of the Birdcage-walk now in progress; and at the north-west end of the Green Park, instead of deviating westward, as the present carriageway does, the esplanade should be continued in a straight line (perhaps tending a few feet eastward), so as to have issue into Piccadilly, at the *open lie-by* beside the Wellington Arch, and just opposite Hyde Park-corner gate.

The issue at Hyde Park-corner, under the Wellington colossal statue, might still be maintained; but the main entrance would be on the east side thereof, opposite to the park-gate next Apsley House.

Thus opened, this noble esplanade would tend in a right line from Westminster Bridge to Hyde Park; and if thrown open, as it ought to be, for the public, would afford an easement in the most important part of the West-end, where most needed.

The present aspect of the wall of Buckingham Palace gardens, although beautifully clothed in ivy, is now dull enough; although, if the wall were abated, the union of those gardens and plantation with the Green Park, would lend a charm to this fine reserve, adding scope to scenery which would really enhance the value of both the grounds, now screened as by a drop-curtain, and the noble houses of Grosvenor-place.

Of course, the removal of the Buckingham garden-wall could never be thought of so long as her Majesty continued to occupy that palace or to prefer it; but some allusions have been made to the possibility of erecting a wholly new royal palace in Kensington Gardens, and the throwing open of the Buckingham gardens, in exchange for an equal quantity of ground in the central and highest portion of Kensington Gardens; thus, by such an arrangement, a truly royal palace might be provided in a more healthy and suitable position, whilst breathing-room and improved expansion would be given to the now least effective but most valuable portion of the public parks.

Whilst the position of Buckingham Palace is not salubrious, its immediate vicinage of Pimlico is anything but consistent with the objects of a Royal court; and the structure, which, originally a nobleman's mansion, was from time to time enlarged, reflects, as a whole, no credit on architectural taste, and offers but little inducements for a royal sojourn in London.

In elevation, the round pond offers the finest and most open site; or a little eastward, at the point *where all the glades concentrate*, the most

* I have a "note" that Richard Jennings, "the Master Builder of St. Paul's Cathedral," is buried in the churchyard of Henley-upon-Thames. He lived at Badgemore,—now Mr. Grote's, the historian. How many masters are there now, I would ask, in the building trade? I write about master masons, and have read or know of master bricklayers, master carpenters, master smiths, &c., and of Master-man the Banker; and I remember the old adage, "Jack of all trades, and master of none." Employer is a hateful word. I had the high pleasure of hearing the illustrious Duke of Wellington recognize the portrait by Sir Joshua of George IV., when Prince of Wales, with the words, "Ah! my old Master, and very like him." Proper words properly applied. The recognition and remark were made at Sir Robert Peel's house, in Privy Gardens.

healthy, convenient, and beautiful position presents itself for the erection of a palace that might give satisfaction to our gracious Sovereign, and do honour to the architectural profession. An exchange of Buckingham gardens for an equal quantity in Kensington would be a good equivalent, considering the extreme value of those central and finely-timbered grounds; and at the same time, the routes and esplanades proposed and in progress would offer the most suitable lines of access to a palace worthy of this metropolis.

Already approached by the two most leading roads of Bayswater and Kensington, and intermediate between these two aristocratic suburbs, no site of the metropolis offers the same advantages as to scenery, accessibility, and healthfulness, finely-timbered and embellished park-grounds being continuous for three miles from the Horse Guards to Kensington Old Palace.

It is true that Regent's Park is, for its scope of view, its terraces, and surrounding roads, an improvement upon the old style of circumjacent thoroughfares; but, although of late well drained, it is too cold and restricted for a royal palace. Besides that, there is hardly width to spare for thoroughfares and esplanades, such as ought to characterize the palace of England's Sovereign.

As to the trifling abatement from park borders required to give dignity to surrounding roads or esplanades, those which have been already formed prove that the grounds, whether viewed within or without the pale, give a sense of expansion and enlargement, improving the openness of aspect, and enhancing the value of all house property near the boundaries.

THE BRITISH ASSOCIATION.

THE Bath meeting has been a highly successful one in point of attendance. The opening address, by Sir C. Lyell, in the Theatre, was read before a brilliant assemblage, 2,300 tickets having been taken for the occasion; and the number of members who attended during the week had reached, on Wednesday morning last, a total of 2,769, made up of,—Old life members, 281; new life do., 36; old annual do., 179; new annual, 99; associates, 1,119; ladies, 1,055. At the close the total number present was estimated at 2,965, and the sum raised 2,789*l*.

The address was one ostensibly on the Bath mineral waters; but, like Bishop Berkeley in his treatise on "Tar Water," who gradually rises up out of his lowly subject to the most sublime and abstract spiritual and metaphysical heights of speculation; so Sir Charles Lyell gradually merged the mineral waters of Bath into highly speculative and general questions in geology as affecting the whole globe.

There was not much matter of special interest, so far as regards our professional province, in the proceedings of this meeting.

On Thursday, in Section B (Chemical Science), Dr. Miller read a letter from Mr. Prentice, describing the blasting operations with gun-cotton in Wales, as being very successful. Mr. Able then gave a brief account of the manufacture of gun-cotton, and by experiments showed how gun-cotton in a loose state burnt instantaneously, and according to the tightness with which it was twisted into strands, the combustion became more gradual and regular. Admiral Maury explained that, while he could not desert his old friend gunpowder, there were many cases in actual warfare where the use of gun-cotton would be preferable. Mr. Scott Russell, at considerable length and with much detail, described its uses in mechanics as a means of blasting or removing rock. He agreed that for that purpose it had six times the power of gunpowder, and was in every way its superior. He approved the use of gun-cotton for throwing projectiles. Some further discussion ensued, which tended to show that the general feeling of the meeting was that, in every qualification but stability, gun-cotton is superior to powder.

In Section F. (Economic Science and Statistics), under the presidency of Dr. Farr, there was a goodly attendance, including Mr. Tite, M.P. for Bath, Sir John Bowring, Bishop Colenso, Colonel Sykes, and others; and Mr. Saunders, Recorder of Bath, read a paper on the "Statistics of Crime and Criminals." He referred to some very early statistics of crime, showing that in the reign of Henry VIII., when the population was under 4,000,000, 72,000 (or 2,000 a year), were put to death for theft and robbery; and that in the reign of Elizabeth, always considered a flourishing one, the country was overrun with criminals; and even in comparatively modern times the Legislature had declared that the worst offences had greatly increased. He then adverted to the improved condition of the country in this respect. He alluded to the establishment of the police throughout the country and the judicial statistics for many years past, and showed that whereas the criminal classes at large numbered in 1858, 134,922, they had gradually diminished in 1863 to 126,139; and if vagrants and tramps were excluded, not being necessarily criminal, the numbers would be, in 1858, 112,363, and in 1863, 92,957, showing a decrease in the last five years of nearly 20,000. This fact was the more important when it was considered that during the last five years the system of penal servitude had been in full operation, by which no fewer than 12,281 convicts who had been subjected to that punishment had been set at liberty. The increase of crime on the whole had not kept pace with the increase of population. There had certainly been an increase in crimes of violence, though in this particular the country was better off than a few years back, such crimes in 1857 being greatly in excess of the last year.

Mr. M. D. Hill agreed with Mr. Saunders in the general results, but when he came to the details he was afraid, he said, there would be found considerable discrepancy between them. Judicial statistics had been too recently established to furnish satisfactory materials to govern our conduct in the practical treatment of criminals.

In the same section, we may here add, Professor Levi read a paper entitled "Statistics of the Number and Occupation of Foreigners in England." The census of 1861 showed that there were in England 84,000 foreigners in a total population of 20,000,000, or in the proportion of 0·41 foreigners for every 100 natives, or 261 British subjects for every foreigner. In France there were 506,000 foreigners in a population of 37,000,000, or 1·35 foreigner for every 100 natives, or 73 natives for every foreigner. In the United States there were 4,000,000 foreigners in a population of 27,000,000, or 15 foreigners to 100 natives, or about 7 natives to 1 foreigner. In Spain there were 35,000 foreigners in a population of 16,000,000, or in the proportion of 0·22 foreigners for 100 natives, or 447 natives to every 1 foreigner. The proportion of foreigners in New York was nearly as 2 to 1 of the natives. Professor Levi dwelt on the occupations of foreigners in England, and it appeared that nearly a fifth of the whole number consisted of seamen, and generally foreigners were engaged in useful industries. There were about 1,700 foreigners in prisons in a total of 120,000. Of 92 persons who suffered the penalty of death from 1857 to 1863, six were foreigners.

Mr. Tite moved a vote of thanks to Professor Levi for his paper. The excellent example set by the learned professor, he said, and the great success which had deservedly followed his career, showed that they could not only tolerate an Italian, but were delighted to receive instruction from him.

In sub-Section D (Physiology), a paper was read, "On the Dietary Question," by the president, Dr. E. Smith, F.R.S., which led to an interesting discussion. Alluding, in course of his paper, to the question as it affected the labouring classes, Dr. Smith observed, that an inquiry of a character unique, at least in extent, has just been completed by him for the Government, which would afford a clearer insight than had hitherto been obtained into the dietary of our labouring population. It had been made at the houses of the agricultural labourers in every county in England, in Wales, the west and north of Ireland, and the west and south of Scotland; at the houses of certain town populations, silk and cotton weavers, &c., with all the care and minuteness which science could suggest; the details of which might be found in the sixth report of the medical officer of the Privy Council. The coarse kinds of bread which were in ordinary use by our forefathers, even to the early part of the present century, were now very rarely eaten. Barley bread was still eaten in the houses of labourers in South Wales, and in the farm-houses of North and South Wales and Anglesea; also in Northumberland and Cornwall, and Devon, and in the southern parts of Scotland; but except in certain poor districts in South Wales, it was not now used as a principal member of the class of bread stuffs. Rye bread was nowhere eaten alone. Oatmeal was used by 20 per cent. of the farm labourers in England. Indian corn was used exclusively in the south of Ireland. Pea meal was never eaten alone as a bread, but in the north of Scotland it was sometimes added to oatmeal for that purpose. . . . Rice was used by about 50 per cent. of the population, but never in the place of bread as a bread-stuff. The average weekly dietary of farm labourers was for each adult and child 13½ lb. of bread-stuff, 6½ oz. of sugar, 5 oz. of fats, 14 oz. of meat, 52 oz. of milk, 5 oz. of cheese, and ½ oz. of tea; whilst indoor labourers obtained 9½ lb. of bread-stuffs, 8 oz. of sugar, 5 oz. of fats, 13½ oz. of meat, 18 oz. of milk, and ¾ oz. of tea for each adult weekly. In the dietaries of the poor, the wives and children are ill-fed,—much more so than the husbands; and a large part of the infant mortality, and of the deaths at puberty from consumption, is due to an insufficient supply of milk and of other good food, and the almost exclusive use of slops. He also insisted that a man's first duty is to provide sufficient nourishment for his family, even if it were only dry bread; and that until this has been effected nothing should be spent merely to please the taste. In order to turn the labourer's overtime to profitable account, it was very desirable that he should have the opportunity of growing plenty of potatoes.

At the close of the paper, Dr. Crisp said he doubted if an agricultural labourer in the receipt of 7s. per week could maintain his family upon meat, tea and coffee, and bread. Mr. Rolleston considered the use of beer and cider decidedly injurious. Dr. Grierson calculated that 1½d. a-day per head was the cost at which a Scotch agricultural labourer was able to feed himself and family.

The result of some inquiries made by the Bishop of Bath and Wells showed that the average consumption by farm labourers was 300 grains, that by in-door labourers was less than 200 grains; and thus, contrary to general belief, the inhabitants of country districts obtain more food than those of towns. A sub-division of the class of farm labourers showed that those living at the farm-houses obtain far more food than the above quantities represent, and are, doubtless, amongst the most fully fed persons in the kingdom. In Yorkshire they eat 19½ lb. of bread, 7¼ lb. of meat, 1 ounce of butter, 28 pints of new or skimmed milk, and 7 lb. of vegetables weekly, besides fruit in summer, and beer at all times *ad libitum*.

Mr. C. H. Bracebridge said that in the military prison in Dublin it was the practice to test the weight and muscles of every man on entering the prison, and to make a similar examination upon his discharge, and if any deterioration in either respect was found, a long correspondence ensued, and blame was visited where it was merited. He had been shown the dietaries, and, to his surprise, they included no meat at all, except a little on Sundays, and that on other days the diet consisted of a large quantity of milk, a large quantity of oatmeal made into porridge, and a large quantity of Indian corn meal. The men were returned in a most satisfactory manner: they had to work exceedingly hard, but not of an exhausting nature; and out of the number about 90 per cent. came up to the same weight and muscle as when they entered, only 10 per cent. showing a small defalcation.

The President said that vegetarians, so far as he understood, indulged in milk and fats,—important elements of food, and only excluded that kind of animal food which required the life of the animal to be taken. The custom in Ireland was for labourers to take with them 3½ lb. of potatoes for dinner, a pint and a half of skim milk, and they took three pints of skim milk in the course of the day. In Scotland there was the same large quantity of milk taken, and in that way the so-called vegetable diet became a highly animal diet. One or two cases amongst the Lancashire operatives which had come under his notice deserved attention. In one case a woman lived on 1s. 9d. a week. She had an allowance of 2s., but of that she applied 3d. a week to redeeming her clothes from pawn. This woman bought 12 lb. of bread and half a pound of treacle, a quarter of a pound of bacon, three herrings, and one ounce of coffee; so that she was able to get bacon or herrings five days in the week. In another case a woman lived upon 2s. 0½d. a week, upon a dietary made up of 8 lb. of bread, 1¼ lb. of oatmeal, 1 lb. of treacle, 1½ lb. of bacon, half a pound of sugar, two pints of skim milk, and 1 ounce of coffee per week.

In Section F (Economic Science and Statistics), on Friday, Dr. Farr stated that the first business was the reading of an important report, not of the section, but of the British Associa-

tion, on the subject of the uniformity of weights and measures. The committee consisted of Lord Wrottesley, Mr. Adderley, Sir W. Armstrong, the Astronomer Royal, Mr. Samuel Brown, Mr. William Ewart, M.P. (who was chairman of the committee in the House of Commons, and who conducted the measure with reference to the metric system through Parliament), the Master of the Mint, Sir John Hay, Professor Hennessey, Mr. James Heywood, Dr. Lee, Professor Levi, Professor Miller, Professor Rankine, Rev. Dr. Robinson, Colonel Sykes, M.P., Mr. Tite, M.P., Professor Williamson, Mr. Purdy, and Mr. Yates. A deputation attended from the Chemical Section to express their opinion on the report. Before the paper was read he would lay on the table the meter,—a brass rod, which was the proposed standard of measure. It was thought to be a very mysterious thing; but, as they would observe, it looked very much like an English yard, but rather better measure. Mr. Heywood, before reading the report, stated that the meter was 3 ft. 3⅜ in. long, and derived its name from the Greek word *μέτρον*, a measure. The following are the recommendations of the committee:—

"1. That it is desirable, in the interests of science, to adopt a decimal system of weights and measures.

2. That in furtherance of this proposal it is desirable, from its scientific capabilities, to adopt the metric system.

3. That as the weights and measures of this country are gradually undergoing a process of decimalization, it would be more advantageous, instead of drifting by degrees into a heterogeneous variety of systems, to change at once to a really convenient system.

4. That it be recommended to the Government, in all cases in which statistical documents issued by them relate to questions of international interest, to give the metric equivalents to English weights and measures.

5. That in communications respecting weights and measures presented to foreign countries which have adopted the metric system, equivalents in the metric system be given for the ordinary English expressions for length, capacity, bulk, and weight.

6. That it be recommended to the authors of scientific communications, in all cases where the expense or labour involved would not be too great, to give the metric equivalents of the weights and measures mentioned.

7. That the influence of the British Association would be beneficially exerted in obtaining from Paris an authorized set of metric weights and measures, to be placed in some public and frequented building in London.

8. That advantage will be derived from the recent publication of metric tables, by Mr. C. H. Dowling, C.E., in which British standard weights and measures are compared with those of the metric system. That treatises explaining the metric system, with diagrams, should be forthwith laid before the public. That works on arithmetic should contain metric tables of weights and measures, with suitable exercises on those tables; and that inspectors of schools should examine candidates for pupil-teachers in the metric system.

9. On the subject of temperature, it is recommended that the authors of reports to be presented to the British Association relative to temperature be requested to give the degrees of heat or cold according to both the Centigrade and Fahrenheit thermometer.

10. It is recommended that the scales of thermometers constructed for scientific purposes be divided both according to the Centigrade and Fahrenheit scales, and that barometric scales be divided into fractions of the meter, as well as into those of the foot and inch.

11. That a committee on uniformity of weights and measures be re-appointed."

Sir J. Bowring said he wished to mention two facts connected with this subject. The first was, that at the recent postal congress at Paris, at which sixteen governments of Europe and America were represented, a resolution was unanimously adopted that the metric system should be universally adopted for postal communication; and that if adopted as a principle it would afford the greatest possible facility for the settlement of accounts and intercommunication generally. The second fact was this, that in China, where there were agglomerated no less than 400,000,000 human beings, the decimal system universally prevailed, and he had never heard of a boy of seven years who made a mistake in any account. He had even heard savages say that the decimal and metric system must have come from God. They found it the greatest blessing, because, having their ten fingers, they always carried with them the means of settling their accounts.

Mr. Ewart, M.P., referred to the great difficulties experienced in teaching and learning arithmetic in our schools, and observed that science, education, commerce, and, he might add, common sense, alike called for the adoption of the metric system.

Bishop Colenso said,—I have glanced over the report sufficiently to see that as a whole I should heartily assent to it. I believe that the time is come when a step may be taken, and ought to be taken decisively, to promote the introduction of the metric system into general use among our people. Mr. Ewart has described very humorously the difficulties encountered by young arithmeticians. I hope that things have changed a little for the better in this respect since Mr. Ewart was a boy. I remember well my own schoolboy days, and the difficulties which I found in mastering the details of "Bonycastle" and other dreary books with which boys were plagued in those days. The remembrances of past misery compelled me, when I became a man, and was engaged myself in teaching boys, at Harrow, to endeavour to relieve the pains of others; and I trust that my efforts, with those of other writers who have laboured in the same field, have not been altogether in vain. But, although matters are somewhat simplified in these days, they would be vastly more simplified if the metrical system were fully adopted among us. With respect to adopting French names, I do not think that that is of much consequence, or that we have any right to complain of being obliged to adopt them to some extent in consequence of their having been already introduced so extensively among almost all the nations of Europe. We are among the last of civilized nations to reform our system, or rather our want of system, in this respect, and we must submit to the consequences. As it is, most probably these longer names of decimetre, dikametre, hectometre, will be cut down to some shorter forms by practical Englishmen; but I imagine we must accept the mètre, though we may make it English if we like by dropping the accent, and spelling it differently. Especially, however, I wish to express my hearty concurrence with the proposition which has just been made, that the influence of the Association should be used with the Government to induce them to require that in all schools assisted by the State the metrical system shall be regularly taught. At present I see no practical difficulty, except the want of elementary books adapted to the new system; and these would, of course, be prepared when the impetus is given by making such teaching compulsory in schools receiving State support. This would not be making the adoption of the metrical system compulsory on the nation at large, but practically it would insure the adoption of it very generally, and would enable us to get rid entirely of the old cumbrous system in the next generation.

The discussion was continued by Mr. S. Brown, Sir B. Brodie, Mr. Fellowes, Professor Hennessey, M. Ansas, and Sir W. Armstrong, who stated that he had found the adoption of the metric system an absolute necessity in his establishment, in order to enable them to work up to the precision and nicety required by the present times.

The report of the committee was unanimously adopted.

Mr. Bracebridge moved that the section recommend its committee to suggest to the Committee of Council on Education the importance of requiring that the metric system be taught in the schools receiving public grants.

Mr. Tite, M.P., said that an important practical suggestion had been made by the chairman, and he thought it was likely to be the means of introducing the thin end of the wedge; for the introduction of this change or any other in England could only be a matter of progress. He thought it important that Government should adopt the metric system in levying the duties on goods imported from France and other countries which use that system. As an architect he had, which was that of twenty years ago, had a great deal to do in France, and he found the adoption of the metric system of the greatest use in facilitating his operations, both in matters of minute measurement and account.

Sir B. Brodie recommended the adoption of the system in all national observatories and scientific institutions.

Colonel Sykes supported the motion.

Dr. Lee said he was an old advocate for the adoption of the decimal system, but he preferred the old English yard to the metre.

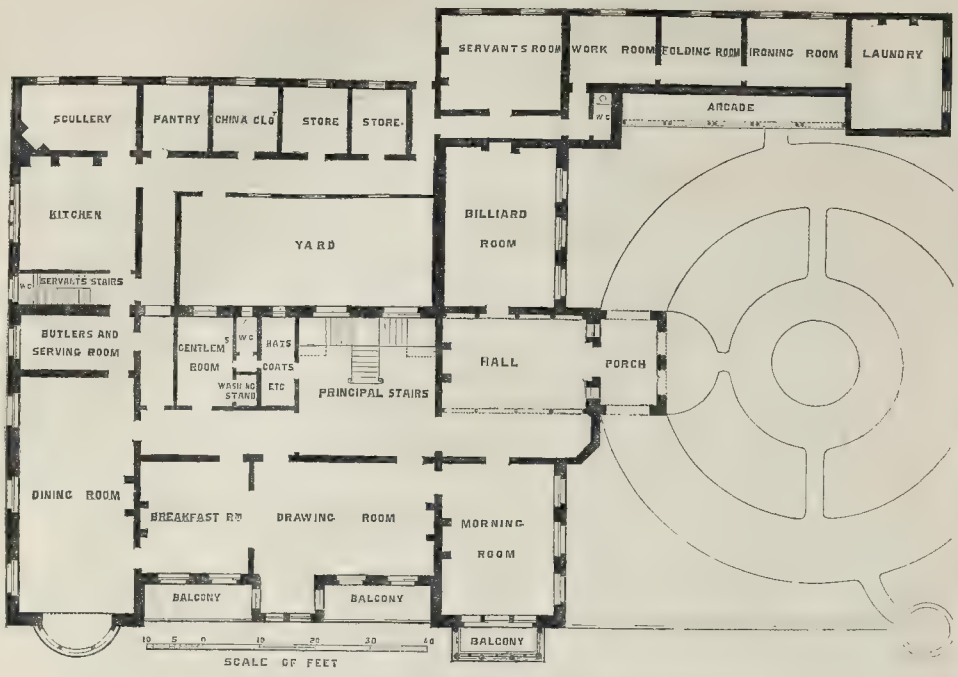
The motion was adopted.

Professor Levi said the metric system, it ought to be known, was not a French, but a cosmopolitan system.

We must return to the proceedings. They were closed with a grand banquet, given by Mr. Tite, M.P., in the Guildhall, to the president, vice-presidents, presidents of sections, and the more distinguished members of the Association.

A RELIC OF ANCIENT CARDIFF. — Some alterations were being made in premises in Duke-street, when the workmen discovered a subterranean passage, with a Tudor arch at the entrance. An ancient fire-place was also discovered on the same premises during recent alterations.

THE NEW EXCHANGE, LIVERPOOL.



THE foundation-stone of the western wing of the new Exchange buildings has been laid by Mr. C. S. Parker, the chairman of the New Exchange Company. The buildings, when completed, will occupy a space of nearly two acres, but the western wing is all that is yet being proceeded with. This wing will contain the newsroom, with an area of upwards of 1,045 square yards, or, with its accessories, of 1,500 yards. It is to be 82 ft. in height, from the floor to the apex of the roof, and will not be completed for about two years. The other wings will then be rebuilt in accordance with the plans of the architect. The cost of this western wing will be 70,000*l.*, but the cost of the whole buildings is to be 150,000*l.*, and the cost to the new company of the land buildings in the first instance was 400,000*l.* Mr. T. H. Wyatt, of London, is the architect. Messrs. Holme & Nicol are the contractors; and Mr. Parsons, of London, is to fill the office of superintendent of the works.

PROPOSED TOWN HALL FOR MANCHESTER.

OUR readers have been informed that the Council of that city have determined to build a new Town-hall. Six sites have been looked at, and the General Purposes Committee have agreed to recommend to the Council the adoption of the site known as the Town's Yard site. The merit of this site is that a large portion of the land belongs to the Corporation; but it is very far inferior architecturally, and, as some think, in convenience, present and prospective, to the Piccadilly site. The Piccadilly site is exactly opposite to the Infirmary front; and, as the probability increases of the Exchange being removed to the site of the present Infirmary, it is more incumbent upon the Corporation to consider well the locality.

SUSPENSION BRIDGES.

AN account of the Clifton Suspension Bridge, just now published in Bristol, has the following comparative statement:—It may be interesting to compare the dimensions of the Clifton Suspension Bridge with those of some others more or less celebrated. The span of the Clifton chains, from saddle to saddle, is 702 ft. 3 in. The span of the Lambeth Suspension Bridge, lately completed from the designs of Mr. Barlow, one of the engineers of the present bridge, is 1,040 ft.; but in this case four piers or towers are employed, and the bridge consists, therefore, of three equal arches or spans. This immense space has, however, been crossed in a single span. The Queenston and Lewiston Suspension Bridge, constructed by Lieutenant Serrell, crossing the Niagara, is one span of 1,040 ft. There is another bridge over the Niagara of 798 ft., which, besides a roadway for foot-passengers and carriages, supports above this a railroad track, and is daily crossed by passenger and goods trains. Another American suspension bridge crosses the Ohio, with a span of 1,010 ft. Nearer home, the best known examples are the celebrated Menai Bridge, of Telford, and the beautiful Fribourg Bridge, built by M. Challey. The Menai Bridge is 560 ft. in span, and about 100 ft. above high-water. The bridge over the Sarine, at Fribourg, is much more imposing, being 860 ft. in span, and 167 ft. above the river. Several bridges have been constructed of greater span than the present; but still, there are considerations which place the Clifton Bridge in the first rank, both as to its grandeur of effect and its importance as a great work of engineering. In the latter point of view, it must be remembered that all the bridges we have mentioned, except the Menai, which is much shorter, are suspended from cables of wire, which, as they suffer much from oxidization, must be regarded as far inferior to iron chains, although lately, from their lightness and economy, they have been often substituted. The Clifton Suspension Bridge is the most magnificent chain bridge ever constructed, and for strength and durability may be pronounced unequalled. The Queenston Bridge, with its immense span of 1,040 ft., does indeed exceed it in dimensions; but its effect is marred by its low position, and the roadway is only 20 ft. wide. The Fribourg Bridge is by far the grandest in effect of all that have been enumerated; but even that is only 167 ft. above the river which it spans; while the Clifton Suspension Bridge is 245 ft. above high-water.

CLERVAUX HOUSE, HAMPSHIRE.—*Plan of Principal Floor.*

MANSION FOR COL. W. THOMSON, NEAR ANDOVER, HAMPSHIRE.

THIS mansion is now in course of erection, from the designs and under the superintendence of Mr. J. P. Jones, of Whitehall-place.

The external walls are to be of a grey stone, with dressings and bands of Portland stone. The shafts to the windows are to be of Purbeck marble, and the columns of arcades to be of red polished granite. The dining-room and billiard-room will be fitted up with oak panelling about 5 ft. high, with carved panels, and the mouldings of walnut. The ceiling will be panelled with walnut, box, oak, and ebony, intermixed, and the walls above the dado are to be stencilled. The floors are to be bordered with parquetry, and the entrance-hall and staircase-hall and passages are to be laid with ornamental tiles. All the doors on the ground-floor are to be of walnut and oak, and the chimney-pieces are to be of statuary marble in drawing-room and coloured marbles in dining-room.

The total expenditure will probably be about 20,000*l.*

THE INTERIORS OF MODERN CHURCHES, AND THE REQUIREMENTS OF MODERN CIVILIZATION.

HOWEVER much the artistic forms of Mediæval architecture may be superior to those which followed them, especially at the epoch immediately preceding the *Renaissance*, and however delightful to the artistic eye may be that revival of so-called Gothic art which prevails in the present day, it is yet quite certain that the interior arrangements of Mediæval buildings, both public and private, were lamentably deficient in all those accessories which constitute the very basis of ordinary comfort, as that word is now understood. Every tourist in Wales, for instance, must have seen the wretched little den, in Caernarvon Castle, in which Eleanor of Castille gave birth to the first English prince of Wales. This rude little dormitory, without the common comfort of a fireplace, even after it had been made smart and stuffy with tapestry on the walls and straw on the floor, for the reception of the royal inmate, must still have remained, to modern ideas, totally unfit for a regal or any other guest; and, in fact, must have been such a bedroom as would have been regarded with scorn by any respectable housemaid of the present day as unfit for a Christian woman; and yet with such wretched arrangements for domestic comfort the general external aspect of the castle was of an imposing character, and its dining-hall, of grand proportions, though its floor was of rough-hewn stone, only covered with rushes instead of Turkey carpeting. Similar objections may be justly urged against all other structures of that and later ages; and yet under the prevailing Mediæval mania we persist in imitating them in all their comfortless details, more especially in our recently built churches, and those now in course of construction. Let us hear what our lamented Thackeray says about the domestic arrangements of our ancestors in their colleges, inns of court, and other public buildings. In "Pendennis," he has the following graphic and interesting passage:—"A well-ordained workhouse or prison [of the present day] is much better provided with the appliances of health, and comfort, and cleanliness, than a respectable foundation school, a venerable college, or a learned inn. In the latter place of residence men are contented to sleep in dingy closets, and to pay, for the sitting-room, and the cupboard which is their dormitory, the price of a good villa and garden in the suburbs, or of a roomy house in the neglected squares of the town. The poorest mechanic in Smithfield has a supply of water at his command; but the gentlemen of the inns of court, and the gentlemen of the universities, have their supply of this cosmetic fetched in jugs by laundresses and bedmakers, and live in abodes which were erected long before the custom of cleanliness and decency obtained among us. There are individuals still alive who sneer at the "people," and speak of them with epithets of scorn; but, gentlemen, there can be very little doubt that your own ancestors were the great unwashed; and in the Temple, especially, it is pretty certain that only under the greatest difficulties and restrictions could the virtue which has been pronounced as next to godliness be practised at all."

And yet this absence, or at all events very scanty presence, of those appliances for common cleanliness which we deem so absolutely necessary, appears to have satisfied the desires in that direction of our forefathers, even in very recent times; and in matters of every other kind of general comfort the arrangements of past times were equally deficient.

In public buildings, more especially, there existed but a rude and wretched nakedness in place of all the refinement and luxurious contrivances modern civilization has invented; a state of things which seems to prove that our ancestors were as robust as they are reported to have been, and as indifferent to the luxuries of ease and comfort as they were careless about the practice of effective ablutions. Yet this absence of all the appliances of what we should call mere ordinary comfort existed in the midst of a display of artistic beauty and many kinds of mechanical skill which have not since been equalled. In the cathedrals of Western Europe, beneath fretted roofs, lace-like in the richness of their sculptural embellishments, and at the feet of columns whose capitals were masterpieces of carving, and whose shafts were often of polished marble, was a rude stone floor,* upon which devotees knelt with bare knees, fearless of rheumatism and all its attendant train of aches and pains; but then, this kind of accommodation was in accordance with the general mode of life, and did not disagree with the devotee. The castle hall was no more luxurious; and the comforts of the hostelry were infinitely less so; therefore, the want of what we should now call comfort in the churches of Mediæval times was not felt. But as general civilization progressed, the church arrangements advanced, more or less, and kept themselves tolerably in accordance with it; chairs, priedieus, and other arrange-

* Richly inlaid marble floors, as at Sienna, were, however, adopted at a later period in Italy.

CLERVAUX HOUSE, HAMPSHIRE.—MR. J. P. JONES, ARCHITECT.

ments having gradually appeared to keep the knees of worshippers from the bare stone pavement; while tapestry clothed the walls, and huge curtains were hung across the doors to shut out draughts of cold winter winds.

At the time of the Reformation, however, when pictures, tapestries, and other decorations of the later Catholic times, which clothed the bare walls, and tended to give a certain amount of warmth to the building, had been swept away as idolatrous, leaving all bleak and bare once more, some means became absolutely necessary for replacing the partial degree of warmth and seeming comfort afforded by the rejected kind of church furniture; and it was in consequence of this difficulty that those high pews were submitted to, the origin of which is traceable to other circumstances. In these separate wooden citadels each family found a certain amount of warmth and comfort, and a degree of protection from the cold currents of air which swept round the bared walls of the reformed churches. The leading families in many villages and country towns, indeed, went so far as to have fire-places in their pews, and to curtain them round to a considerable height above the high wooden walls themselves. By such means and others the cold wretchedness of the stripped churches was much abated; but yet no general system of warming was attempted, and doubtless the sons and daughters of families passing six days of the week in rooms with well carpeted floors, papered walls, and warmly curtained windows, when exposed on the seventh to the inclemency of a stone-floored church, without a fire, even in the depth of winter, often sowed there the seeds of consumption in their constitutions, along with the germs of a long list of other painful diseases.

Yet, with all this plainly in view, and frequently alluded to in the works of medical writers, one of the best innovations of the restorers of "Gothic art" has been the removal of even the partial protection of the pews. In place of that slight shield from draughts and cold, low unprotected benches are being very generally adopted, and the old pews entirely swept away. While this is doing, no attempt is made to re-clothe the stone walls with pictures and tapestry as in the later Roman Catholic times, and the only measures taken for giving something in exchange for what is taken away is a general system of warming by hot air, or hot water, which is far from supplying the place of the boarded floors, and flock papers, and thick carpets, and warm window-curtains of our private rooms. In fact, with a stone floor, no apartment can be made generally and comfortably warm. In the old London kitchens, for instance, with stone floors, even where great fires were kept constantly burning for cooking purposes, female servants almost invariably suffered from peculiar diseases which had their origin in the cold which struck to the feet from the always damp and cold stones, which the general warmth of the kitchen could but slightly modify. This must be more or less the case in stone-floored churches, however much the stone may be disguised by a few strips of matting up the nave and aisles, and by foot-boards in front of the sittings. And then, it is to be observed and noted, that such warmth as is obtainable from the hot-water pipes, and the matting and partial boarding, is, in many churches, to a very great extent, neutralised by the violent means resorted to for the purposes of what is called ventilation; which generally consists in the introduction of severe draughts of cold air in various directions. This, in conjunction with the cold given out by the bare stone walls, renders the interior of a church about as different a thing as possible from the cosy, warm, and every way comfortable drawing-room from which delicate girls go forth to sit for two or three hours in these desolate interiors, where they too often catch their death: and yet they would never admit it. Such is the devotion of the female character to what it deems right, that were the risk twice as great, few would hesitate to incur it. It is the business of the other sex, therefore, to see that this devotion is not made unnecessarily self-sacrificing, and it is with this view that the present article has been written.

There can be no necessity for continuing for ever to make all interior church arrangements precisely what they were in rude ages. Yet, that there is a disposition to do so, both on the part of architects and a certain section of our clergy, and also an influential portion of the public, there can be no denying. The simple fact being, that in some minds forms become unduly blended with principles,—and then arise such absurd terms as "Christian architecture." The cure for this error should be sought for in the period of the Church's greatest predominance and influence, when it will be found that ecclesiastical art was not stationary, as it is now sought to make it, but was ever actively assuming a splendid series of new forms, each successive phase of which was governed by the spirit of the age in which it found its expression, and from which it derived its epochal impress. There can be no greater mistake than to suppose that the revival of obsolete forms, however excellent in themselves, can aid the progress of either secular or religious teaching. The spirit of religion, as of philosophy, is above all things expansive, suiting itself to the requirements and intellectual cravings consequent upon general progress; and when, therefore, it is sought to accompany its administration by rigid observation of antiquated forms in its temples, that expansive quality which would adopt the truths of religion to all time is cramped and impeded.

These are a few of the reasons why it should seem that the time has come for a thorough revision of the general character of our church architecture, especially as regards its internal arrangements. In other public buildings, where numbers of people of both sexes have to be accommodated for several hours at a time, the arrangements for personal comfort and for health are to a great extent in accordance with those of our private homes. In our principal theatres, the floors of the boxes are carpeted, the seats are commodiously stuffed, and the boxes themselves, at the operas, curtained in front and painted or papered at the back; while the sofa stalls are positively luxurious, and the ventilation is more or less well attended to. Of our great concert-halls the same may be said. And the Reading-room of the British Museum may also be cited as an additional example of well-considered arrangements for public comfort, except in regard to ventilation, to be spoken of further on. There the entire floor is covered with kamptulicon, which has not only the advantage of producing a comfortable sensation of warmth to the feet, but preventing the slightest noise from the occasional footsteps of either attendants or readers. The chairs, too, and the reading-tables, are of the most comfortable kind, so that persons may remain at their studies for several hours, without having the unavoidable amount of fatigue increased by comfortless seats and desks, as in churches.

In order to remedy this state of unwholesome discomfort which at present prevents many persons of delicate constitution from attending our churches, while to those who do attend, and are not of extremely robust constitution, bad colds, the forerunner of many more severe and dangerous forms of disease, are almost a certain consequence, our leading architects must be appealed to. There is no reason why our churches should be the only places of public assemblage where bare walls and stone floors are the most comfortable form of accommodation afforded to the public. So far from being inferior to a private drawing-room, or a public concert-room, our churches should display the very highest forms of our social and domestic civilization. The flooring should be of the rarest and most beautiful woods, richly inlaid in parqueterie, if not completely covered with the richest carpeting, of suitable design and character. The walls should be clothed with tapestries, exhibiting well-wrought Scripture subjects,—or, when that was objected to, with magnificently-designed patterns of a sacred character; the windows should be curtained with the most costly velvet or silken damask, which should be made to draw at night, as in private dwellings. In short, the temples of religion should exhibit the highest examples of human ingenuity and genius, instead of being, as they are in their interior arrangements, inferior to those of a private home. In preceding ages, the temples of national religion have always exhibited in the highest degree examples of all the arts of their respective periods,—whilst now, in the nineteenth century, by reviving obsolete forms, the church alone, which ought to be an example of our most consummate skill in the higher, as well as in the domestic arts—remains behind all other classes of public buildings in its internal arrangements.

Ventilation especially is most clumsily applied, in almost all cases. During the daylight services it is true that a sufficient supply of fresh air is generally obtained, though by such reckless means as render the supply oftentimes more dangerous than its absence; for in such lofty interiors as those of most of our modern churches, so large a supply of air is naturally provided, without resorting to artificial methods of renewal, that during the day little more would be required; while the cold currents produced by the forced introduction of free external air, often without any attempt to warm it in its passage, are frequently productive of the very worst effects on the systems of delicate persons. It is well known to plant-growers, that when a constant current of air exists in a greenhouse or conservatory, the plants within the influence of that current suffer greatly, have their growth checked, and frequently die; and such currents are scarcely less injurious to the human subject than to plants. Some better manner of introducing fresh supplies of air is therefore necessary. All present methods are too violent and sudden. The fresh air should find its way gradually and imperceptibly, or bad effects are sure to ensue. The ventilation of the reading-room at the British Museum has the defect just described, of being too violently introduced. The consequence is that readers in certain parts of the room are subject to the action of nearly constant cold currents. This is so palpably the case, that it is unsafe to sit without a hat; and many readers keep on an overcoat, or even put on one while in the room, to take it off when outside and beyond the reach of those inclement winds. Perhaps it is with a view to realise the term *ventilation* literally, that these blasts are resorted to. If so the term had better be altered to aëration at once, so as not to lead our punctiliously etymological architects astray any longer.

But it is at night that the question of church aëration becomes most important, for it may be said that no system whatever has been adopted to prevent or even mitigate the bad effect on the surrounding atmosphere produced by a vast number of flaring gaslights. The measures resorted to by daylight, good or bad, become altogether inapplicable at night; and the heat, closeness, and uncomfortable sensation of the presence of foul air become not only something more than unpleasant, but absolutely and actively dangerous. Scarcely a private dining-room lighted with gas is without a tolerably perfect aërating apparatus attached to each gas-burner, and connected by proper tubes with the external air, which is ingeniously warmed as it comes in by passing through a larger tube that surrounds the small pipe carrying away the hot and deteriorated air from above the burner. This has been found necessary in rooms where only one gaselier is used: while in a church, where there are dozens, not to say scores, the pollution and burning of the air are allowed to go on unchecked, and the consequence is that our gas-lighted churches are about the most dangerous places for generating diseases arising from foul air that could be named; scarcely excepting the back courts of Drury-lane.

To remedy this state of things, let the most elegant and richly fitted-up drawing-room of Buckingham Palace or Stafford House, or the most luxuriously arrayed public hall, be taken as the fundamental type of what is desirable in our churches; and let all the appliances of comfort and beauty thus selected for adoption be elevated in style, and increased in beauty; and let them be refined, dignified, and stamped with a solemn and sacred grandeur of character, making them in every way worthy of the high purpose to which it is intended to devote them. It would seem quite impossible, even as a matter of religious feeling, that the house of God should be allowed to remain inferior to private dwellings; and yet, plenty of trite reasons are urged to prove that our churches had better remain as they are. It is urged, for instance, that the appurtenances of ordinary life could not be made otherwise than inconsistent with church architecture, and the solemnity of aspect which befits a building of sacred character. Such, and many other existing crotchets of the kind, are invariably brought to bear upon any attempt at innovations of the sort proposed. For instance, a well-known French critic, whose fiat in matters of art was generally considered conclusive, once declared that mahogany could not, without the grossest impropriety, be used for the rostrum of the chamber of peers. It, forsooth, had been vulgarized in the form of the dining-table, the wardrobe, and the chest of drawers. Ebony and oak were, he maintained, the only woods that could be used for the purpose in question. This sounds well, and there are doubtless associations connected with oak and ebony which seem to render their adoption for state or sacred purposes

more legitimate than other woods. Nevertheless, it is quite certain that a mahogany rostrum might have been designed which would have been equally grand and dignified as one of ebony or oak, in spite of the artistic superstitions in favour of those materials. However this may be, it cannot be right that our churches should be allowed to remain, from their inferiority to other buildings, absolutely unhealthy, and the direct cause, in a multitude of instances, of originating disease.

MEDIÆVAL ART EXHIBITION, MALINES.

THE Exhibition will remain open till October 15th. Up to this time it has excited less attention than it deserves. Mr. J. C. Robinson writes concerning it,—I need not remind your readers that Malines is a most accessible place, but it is not so generally known, even to those who may have passed it on the railway over and over again, that it is also one of the finest and least altered old cities of the Low Countries; to the architect, the archæologist, and the lover of the picturesque, indeed, this old imperial city is full of interest. It has a noble metropolitan cathedral, several first-rate Gothic churches, unusually well preserved and rich in detail, a museum containing some most curious pictures and other relics illustrative of local history and manners. Three great master-pieces of Vandyck and Rubens still adorn the altars of churches for which they were originally painted. Nowhere else can the really great school of Flemish seventeenth century wood and ivory carving, at the head of which stands Lucos Faidherbe, the Rubens of this art, and a native of the town, be studied to greater advantage; and, finally, some hundreds of ancient houses of all dates and styles give to the streets and quays that indescribable old-world charm which, alas! now lingers so rarely elsewhere.

The Exhibition itself contains an admirable series of book covers, chalices, and reliquaries of every style and type, from that of the humblest village church to the magnificent gifts of crowned heads to the great abbeys and cathedrals of the richest country of Mediæval Europe; also an unrivalled series of works in brass known as Dinanderies, from the pre-eminence of the town of Dinant as the seat of fabrication. At the head of these may be cited the great paschal candelabrum of the Church of Léan, standing upwards of 17 ft. high, carvings in ivory from the early ecclesiastical diptychs, and book-covers of the eighth and ninth centuries, down to the florid and masterly works of the school of Brabant, of the age of Rubens, the productions of the Duquesnoys, Faidherbes, and Guellins of the seventeenth century—splendid embroidered vestments, tapestry, illuminated manuscripts, &c.

MEDLÆVAL BRISTOL.

ON the 7th instant, the Bristol Society of Architects walked round their own city. Previously to starting, Mr. E. W. Godwin read an introductory paper, of which an abstract has reached us. Having remarked that there are four classes of towns—military, baronial, ecclesiastical, and commercial—the writer said that the great towns of the Middle Ages belonged chiefly to the commercial class. They were mostly seaport towns. Self-dependent, self-contained, self-governed—perhaps savouring a little too strongly of self—they exercised in the end the greatest influence, because they were the greatest workers in the State. The Roman walls have long since crumbled into dust, and, having served their purpose, their military cities have settled into quiet country towns, or, what is as bad, have degenerated into mere haunts of fashion. The baron's hall is now a rag and bone shop: the vaulting ribs of his proud lady's chamber bend over the blacksmith's forge; and the highest battlement of the loftiest tower is crumbling under our feet. The great monasteries, too, are no better off: cabbages are growing where the abbot and his royal guests sat at meat; and there is a merry hay-making, once a year, over the very foundations of the high altar. Through all these changes most of the great commercial cities have lived and flourished. Where marshes once existed wide streets and squares have risen, and the hard-working arms of commercial enterprise have pushed the boundaries of one of these grand old towns to ten times the compass of its first walls. The inner town of Bristol lies between St. Nicholas Church, south, St. John's Church, north, St. Peter's Church, east, and Messrs. Stuckey's bank, west. These points give the extent of the first walled Saxon town, and show that before the Norman conquest the town of Bristol was of no mean importance. That the relics of this Saxon town which have been spared should consist merely of ways or streets, and perhaps a few portions of the wall, is to be mainly attributed to the fact that the private houses were built altogether of wood and plaster covered with thatch or shingle—a thick mass of low whitewashed tenements. He saw no reason to doubt, however, that the churches, town walls, and gate towers were of stone.

At this early period the aspect of Bristol externally would be a crenellated wall following an irregular curve, with four principal gate-towers, north, south, east, and west, and three smaller ones on the north side. Entering the town, we should find a street leading from each chief gate to the centre of the town,—Corn-street from the west gate; Wine-street, or Wynch-street, from the east; High-street from the south; and Broad-street from the north. Inside the wall, from gate to gate, was a lane or way, and on the larger side of the town this lane communicated with the main street from the west, viz., Corn-street, by Small-street, which is almost parallel to Broad-street, and at the end of which was a gate-tower. He would not pretend to point out the site of the Saxon churches. Saxon Bristol may or may not have contained ten or a dozen churches. They could not stay to inquire. Four centuries must be passed over; and they would renew their acquaintance with Bristol at the time when William de Wyrcester tended his herbs by the gate of St. Philip's churchyard. Great changes have taken place in the appearance of the town. From the concluding words of King John's charter, it may fairly be argued that the first extension of the town walls took place soon after the year 1188, the space between the old town wall and the river Froom (north), and the ground lying between the town and the castle (east), being taken in by the new wall. This was of considerable advantage to the town; for, by reserving the old wall, it became possessed of a double line of fortifications on its weakest side. The new gate towards the castle was erected close by the Castle Mill, and to this day two or three of the houses in Castle Mill-street are still known by the words "under Newgate." Then followed the extension southwards towards the Marsh, as Queen-square, with its neighbourhood, was then called. Before Edward I. had ascended the throne, a continuous chain of religious houses stretched from beyond Newgate, or the eastern gate of the town, along the north and west banks of the Froom to where the sun went down over the low marshes at the confluence of the two rivers. Nor did they end here; for behind and above these, to the north, rose the nunnery of St. Mary Magdalene and the tower of St. Michael; whilst, to the west—strange gloom against the western sky, still stranger in its likeness to Calvary—stood the chapel-crowned hill, St. Brendan.

They could not sufficiently understand in the compass of a single morning the character of Bristol in the afternoon light of its Mediæval glory. The great danger of commercial towns is wrapped up like a viper, in the bundle of their life. Out of their very strength grows the tyranny which is their weakness. Everything must depend upon the one question, "will it pay?" The inquiry is not will this thing be profitable to our understanding, or have a wholesome influence on our hearts? but will it fill our pockets? Thus it was that soon after the lordship of Redcliffe was added to the town, when its commercial power and grandeur rivalled the baronial and ecclesiastical powers on each side of it; when its inhabitants began to think more and more of spices and cloths, and ships and warehouses, and fine dresses and high houses; becoming every day less simple in their manners, their conversation, and their wants—the sun of Bristol's Mediæval day began to decline; then it was that in architecture mere size and superficial ornament gradually encroached upon the field which had before been occupied by purity of form and the real poetry of art, until the gloomy night arrived, when the title of artist became a term of reproach, and art was meted out by the yard. He had said thus much in order to prevent them from accepting as gospel all the old works they were to see that day. For in the middle of the fifteenth century, when Wyrcester wrote, there were two powers in the city, which were in the full blossom of their maturity. For a century they had been growing and gradually exercising greater and greater influence. These two powers were money and a mania for building. To the first we owed such works as the church of St. Mary at Redcliffe and the towers of St. Werburg and St. Stephen, and to the last we were indebted for destroying right and left the less showy, but more lovely, works of what is acknowledged, by every one whose opinion is worth having, to have been the finest or purest period of European art.

PICTURE HANGING AND FIRES.

AMONGST losses by fire we have lately had to regret the destruction of numerous paintings and other works of art. This is a circumstance always to be regretted; for even by money we cannot replace the productions of famous masters who are dead. It is, therefore, important to consider if there be any means by which pictures could be hung, so that, in case of fire, they might be more readily removed than at present. A large picture—a full-length portrait, for instance, in its massive frame,—is a heavy and unwieldy object, which needs the exertions of several men to carry it; and as now hung there have been accidents with such pictures, owing to the rottenness of walls, the breaking of the iron fastenings, &c. The late Earl Grey had a narrow escape, at Howick Hall, from the fall of the effigy of one of his ancestors. Safety in this respect may be generally secured by care in the first instance, and by occasional examinations; but it unfortunately happens that paintings fixed in the usual way are comparatively unmovable, except after considerable labour and time, so that in case of fire it is almost impossible to get them out. It is advisable, in the hanging of pictures, to use iron rods, which should be so fixed as to allow the works to be at the proper angle for sight; while they could be readily lowered by means of cords and pulleys. There should also be facilities for removing the paintings from the massive frames. This might be so contrived that although the canvas might be strained tight, it might be removed, rolled, or folded; and, in case of danger, taken to a place of safety.

During a comparatively short space of time several important mansions, together with their contents, have been destroyed by fire; and this shows the necessity to which we have referred of having the means of extinguishing fires conveniently at hand. There are few situations in which this cannot be managed at a moderate cost. In the *Builder* there was some time since an account of Hatfield House, in which reference was made to a disastrous fire which occurred there. Since then water has been raised to the roof, and kept in large cisterns, and matters are so managed that, with ordinary care in this stately mansion, the ravages of an extensive fire are scarcely possible. When the great and growing interest of many of the homes of the English gentry is considered, it is to be regretted that more especial care is not taken for their preservation; and it is worth while, at the present season of the year, when many country homes are fully occupied, to direct the attention of the proprietors and those interested in them to this important matter.

SANITARY MATTERS.

Henley-on-Thames.—It has been decided, nearly unanimously, at a public meeting of the ratepayers in the town-hall, to adopt the Local Government Act within the boundaries of the recently-formed Henley district.

Croydon.—An account of a recent visit to the Beddington sewage meadows, near Croydon, is given in the *Oxford Journal*. It appears that a hot dry summer is not favourable to succulent vegetable growth, even where the soil is soaked with sewage-water. The tendency of the Italian rye-grass to throw up its seed-stem is irresistible under such circumstances; and the great first cutting of thirteen or fourteen tons per acre, grown under the cool moist air of March, April, and May, has this year been followed by cuttings of not more than five or six tons per acre grown in June, July, and August. Those who speculate on the possibility of turning London sewage to account on the low-lying lands of such a dry hot district as the counties of Kent and Essex generally are in Midsummer, must

consider this diminished efficiency of their manure at that season. It is to some extent a counterbalance to this deficiency of power of sewage-water, however, to find that it has this year proved remarkably efficient at Beddington in growing mangel wurzel. There was an extremely promising young crop of mangels, full of growth and without a blank. The writer says he had never seen anything like so good a plant after so late a sowing.

Wolverhampton.—There appears now every probability of the sewerage being commenced. Tenders for the execution of two miles and a quarter of main sewer are advertised for, and the sewerage committee are authorised to cause all necessary notices to be given to the owners and occupiers of land into, through, and under which certain of the sewers are to be carried, and also to make all necessary arrangements with such owners and occupiers relative to such sewers. The general plan of the sewerage, which has been approved by the Secretary of State, and also the working drawings, sections, &c., now lie at the office of Mr. Purnell, the borough surveyor.

Liverpool.—The Local Health Committee have had under consideration certain fever cases in the workhouse, and inquiry is being made whether the patients have been resident in the town. One member stated, that many fever-patients of this class were merely strangers, and sojourners for a short time in the town. The Committee have taken their first procedure under the new Improvement Act. The Chairman said that a visit had been made by the General Purposes Sub-Committee to some of the courts at the south end of the town, on the invitation of the medical officer of health. There were plans on the table showing what the courts were, and suggesting three different modes by which the borough engineer and the medical officer proposed to deal with them under the new Act, in order to make them fit for habitation. Mr. Newlands, the borough engineer, then explained the plans, which were for the improvement of Roberts-street and Mann-street, Toxteth Park. The expense by the first plan would be 3,000*l.*, by the second, 5,000*l.*, and by the third (which embraced the demolition of the most of the property, and the erection of new houses), 15,000*l.* The Chairman explained that they had the power to spend 100,000*l.*, which was at the rate of 6,000*l.* a year. Mr. Newland stated that according to the plans they would remove sixty-five houses. Dr. Trench said he did not think that the worst part of the town. Mr. Newlands suggested that they should take bad courts in every district, operate at once, and spend the 100,000*l.* as fast as they could. A long discussion followed.

Whitehaven.—The Whitehaven Trustees have let the construction of the sewerage of the town to Messrs. Nawell & Docwra. It was stated by the chairman at a recent meeting that the whole cost would probably be about 30,000*l.*

Carlisle.—A letter from the town clerk of Birmingham to the Carlisle town clerk, lately read at a council meeting, says,—"I am instructed, by the Public Works Committee of the Council of this borough, to inquire whether the Council of your borough will join us in making an urgent request by memorial, or otherwise, and by the representations of your borough members, to Sir George Grey, praying that he will give immediate instructions for the preparation of a bill, to be introduced in the ensuing session of Parliament, to enable local authorities to execute the works necessary for the distribution of sewage in the manner recommended by the Select Committee. The matter is one of incalculable importance to this borough and many others, and the Council will feel greatly indebted to your Council for its cordial co-operation."

Miscellaneous. — A London contemporary, while discussing the merits of the report of the Metropolitan Sewage Committee, makes the following remarks:—It would be a slovenly housemaid who should throw all the sweepings of the house into the water-butt. Yet that is what we have been doing, and we have appointed a parliamentary committee to show us how wrong it is. The Naiads cry shame upon us, the fishes fling themselves on their backs in despair, and die drunk. We begin to feel sick ourselves, and ask each other, "What next?" We have now our answer for the fiftieth time, but never so clear and distinct as now. Croydon once drained itself into a fever; but it now fertilises a farm of 250 acres and clears 250*l.* a year! Who and what are the men of Croydon that they should thus have the laugh of all the nation? It appears that they have had the good luck to be driven, *nolens volens*, into doing a very clever and sensible and spirited thing. Blessings in disguise came upon them in the shape of costly injunctions against pouring their sewage into the Wandle. Costs and damages were growing ruinous. The Croydon authorities grew desperate. They hired some land, and rented it on lease to a farmer on condition that he allowed the sewage to flow over his land before it entered the river. Little or much, day by day, Mr. Marriage was forced to let this filthy stuff flow over his fields, and the result was that when the sewage reached the river it was quite free from offensive properties, and left behind it such tremendous crops that the local board only wish they had a chance to raise the rent. Purification and profit thus go hand-in-hand, and the right use of sewage is made palpable. The Croydon plan—modified according to circumstances, and improved according to experience—is required all over the kingdom.

EVILS OF NEW HOUSES.

Great mischief is produced by the occupation of new and damp houses. Medical authorities have traced outbreaks of diphtheria to this cause. A recent death, which has been attributed to this too early occupation of a new house, is worthy of notice. At No. 11, Park-road, Mile-end, a boat-builder said that he had only been in the occupation of the house a fortnight: his wife and children were then in good health. When a fire was lighted in the rooms the water would run down the walls, and the back yard was flooded with water through bad and deficient drainage. [How did this occur in connexion with newly-built premises?] He had complained to his landlord, who said that all new houses were damp. On Thursday morning this man's son, seven years of age, was left in bed, apparently asleep, and after the father had taken his breakfast he went to the bedroom and found the boy dead. Dr. Talbot was called in, and could not account for the death. The body was clean, and well nourished. He had since made a *post-mortem* examination, and found the lungs highly congested; and the death, he had no doubt, had been accelerated by living in a damp house, not fit for occupation. The jury returned a verdict that the deceased died from congestion and inflammation of the lungs, brought on by living in a damp and newly-built house. The coroner's officer was requested to report the verdict to the officer of health.

During the school-boy days of the writer, a newly-built school-room, which had not been rightly aired, was taken possession of, and in the course of a few days afterwards twenty-five boys out of thirty were detained at home by illness.

COST OF CHURCH BELLS, 1680: SALISBURY.

As I have recently read an article in your paper on the cost of church bells, I think the following, which shows the cost to the dean and chapter of Salisbury Cathedral for recasting two of the bells which belonged to the belfry that was taken down and the materials sold at the end of the last century, may be interesting to some of your readers:—

"1680.	£	s.	d.
Aug. 16. Item, articles of agreement between the Dean and Chapter and Clement Towser, of the city of New Sarum, bell-founder, and Elizabeth Flowry, of the same city, widow, agreed to recast the 7th and 8th bells, and to find metal necessary, which metal to be composed of 8 parts of the best copper and 2 parts of the shortest tin. To be paid 20s. per cwt. for the casting, and 6*l.* for every cwt. for extra weight of the bells.			
Aug. 19. Charge for taking down and waying the 2 great bells, and drinks	0	12	6
Sept. 4. For carrying the bells to the founders	0	10	0
Oct. 25. Charge for meat and drinke at the casting the bells	1	2	0
For bringing them down into the close	0	10	0
Charge in waying them and pulling them up into the tower, and beere	0	14	6"

The charge for labour may appear very low; but from the clerk of the works' accounts at this time I find the master-mason received 1s. 8d. per day; a workman, 1s. 6d.; a labourer, 10d.; a plumber, 1s. 8d.; his man, 1s. 6d.; a carpenter, 1s. 6d.; his master, 1s. 8d.; a glazier, 1s. 6d.

In 1474, a carpenter was paid only 6d. per day; a labourer, 4d.; and a plumber, 7d. per day.

F. R. Fisher.

THE WILLIAM I. MUSEUM, AMSTERDAM.

Sir,—In the number for the 10th inst., of your excellent publication, you publish a perspective view and ground-plan of one of the designs for the William I. Museum presented at the late competition. You add to the admirable reproduction of the design the information that it was this which, after the one by Messrs. Lange had been laid aside, had been adopted by the Commission, and was to be executed.

Permit me to rectify this statement. Two architects received prizes. First, Messrs. Lange, father and son, of Munich, for a "Doricoionic" design; secondly, M. Cuypers, of Ruremonde, for an "*interpretation*" *in the Renaissance of the sixteenth century* of the *Gothic composition*, of which you reproduced the principal features. As the Lange design did not come up to the area required by the programme; and as M. Cuypers' system of lighting did not conform to the stipulations of the Commission, neither of the prize designs was selected for execution.

Every one would have supposed that the Commission would have put itself into communication with the prizemen (whether MM. Lange or M. Cuypers) to alter one of their designs, at the discretion of the Commission; but a different arrangement was chosen, and another architect, M. Godfroy (a member of the jury which decided the competition) was named to make a fresh plan.

I have, therefore, sir, to request you to have the kindness to erase the word "selected," which appears under the national and grandiose design of M. Cuypers.

Respectfully yours,
J. A. Alberdingk Thijm,
Late Secretary of the Commission for the King William I. Museum.

Amsterdam.

*** The information as we gave it came to us from friends of the architect. The determination of the Commission, as stated in this letter, is not creditable.

SECURING ROOFING SLATES TO OPEN BATTENS.

My attention has been directed to the diagrams in "Weale's Rudiments of Building," p. 116; and again to similar diagrams in "Tomlinson's Cyclopædia of Useful Arts," p. 637, as showing the usual and proper mode of nailing roofing slates to open battens. Both these diagrams show the two nails close to the top of each slate, which is, I believe, at variance with the usual practice nowadays of putting the two nails near the middle of the slate, viz. the distance of the gauge plus the lap or weather from the bottom edge, which for duchess slates 24 in. long would be, say gauge, 10½ in. + lap 3 in. = 13½ in. from the bottom.

This nailing of the slates near the middle seems to be much the best to resist the action of the wind on and under the slating, and there is no chance of wet penetrating through the nail-holes more than through the open vertical joint of the under course of slates, whilst slates fixed at the top edge only would be liable to be lifted and torn off by a strong wind.

Will some of your readers give an opinion as to the *best and usual mode* of nailing the slates on open battens; whether 13½ in. from the bottom for duchess, or close to the top edge?

It is presumed that the latter mode, if ever practised, is now quite obsolete, and if so, the two works in question require revision in this particular.

Surveyor.

ACCIDENTS.

On Monday morning a fire broke out in Gresham-street, one of the densest mercantile quarters in the city of London, which in little more than an hour destroyed property and merchandise of immense value, including the more interesting parts of one of the most ancient halls—that of the Haberdashers' Company. Of the building in which it originated, and which was erected a few years ago at the cost of some 20,000*l.*, only the bare charred walls and portions of the floors remain. The damage done to the hall of the Haberdashers' Company is said to exceed 10,000*l.*, and the fire spread to other buildings right and left, destroying property of great value. The original hall of the Haberdashers' Company was destroyed in the Great Fire of London in 1666, except that

part of it called the strong-room, in which the ancient muniments and plate of the company were deposited. The present hall was erected in 1668, two years afterwards, and portions of it had been restored and decorated in the present year, at a cost of from 4,000*l.* to 5,000*l.* The banqueting-hall, of which nothing now remains but the four walls, is about 60 ft. long by 30 ft. in width. The roof and ceiling have been entirely destroyed, and the hall is now open to the sky. The cause of the fire is at present unknown.

In Little Bush-lane, Thames-street, where the City terminus of the Charing-cross railway is to be erected, some dilapidated houses are in course of being pulled down. The walls have suddenly fallen, carrying with them the scaffolding reared against the walls, and seriously injuring several persons.

A hundred houses have been burnt in a fire of obscure origin at Chatteris, Cambridge; and one-half of the village of Billinghay, near Tattershall, in Lincolnshire, with a chapel and a number of farm buildings, with a great deal of agricultural and other property, have been destroyed by a fire originating in the chimney of a carpenter's shop.

At the Vauxhall Foundry, Liverpool, a large cylinder was being hoisted out of the pit in which it was cast, when a chain ring broke and the cylinder fell back into the pit, and was allowed to remain there till next evening, when it was found that one of the workmen was missing, and on examining the pit his feet were seen among the sand. The cylinder was hoisted out and the poor fellow's remains removed. The coroner's jury attributed great carelessness to the deceased's fellow-workmen, and considered that the accident arose from insufficient strength in the ring of the tackle.

In a cutting of the Stockport and Timperley railway at Gatley, a mass of earth of about 50 tons weight fell while some navvies were at work, and although one of them was set to watch for such a fall, a navvy was driven against a waggon and had his brains dashed out, while two others were seriously injured.

At the theatre of Madgeburg, in Prussia, during the performance of "Robert and Bertram," the scene of a part of the first act passes in a tower raised at a considerable height above the stage; and while the play was in progress the tower suddenly fell to the ground with two actors who were in it at the moment. These men were both killed on the spot: an actress had her arms separated from her body; and a number of other persons received injuries from the fall of the beams and planks of which the tower was constructed.

PROVINCIAL NEWS.

West Ham.—Messrs. Curtis & Son have presented their report for the enlargement of the union-house. It is proposed to erect a new infirmary, capable of holding 100 men and 100 women, to enlarge the infectious and recovery wards and the boys' and girls' school-room, build store-rooms and officers' rooms. The cost is 5,795*l.* The estimate for holding 250 additional inmates is 5,795*l.*, or 23*l.* per head. It has been resolved by the local guardians to adopt the plans and report of Messrs. Curtis, and to apply to the Poor-law Board for leave to carry out the proposed enlargement of the house.

Brentwood (Essex).—The new town-hall has been formally opened. The building is erected in the Italian style of architecture, the portico being composed of four fluted columns of the Corinthian order. The first-floor windows on either side are Ionic, and the base or ground story rusticated, the whole being surmounted with enriched cornice and balustrade. A bracketed and illuminated clock projects from the centre of the pediment, and the front of the building is executed in Portland cement. The hall is 74 ft. long by 37 ft. 6 in. wide, with open roof 29 ft. in height to the ridge. The main timbers of the roof are stained and varnished, the ceiling being divided into panels or compartments by means of moulded ribs, which, together with the moulded deal cornice, are also varnished. A feature in the roof is the tie-rods, which are of iron, while the spandrels formed by them are filled in with ornamental ironwork, all of which is pricked out in colour. The hall is ventilated by means of eight octagon panels in the ceiling (which also serve to light the centre of the hall), by perforations through the entire length of the cornice and by the windows. Ornamental gas stars light the hall, which is approached by a wide stone staircase, built externally so as not to destroy the space in the hall. The ground story possesses reading-room, shop, shop parlour, ladies' retiring-room, committee-room, &c., back staircase entrance, and back halls, hall of communication, and house for the parish engines, while the basement is devoted to cellarage. The entire cost of the building, including the orchestra, has been about 1,800*l.*, the capital of the company being limited to this sum. The works have been executed by Mr. Conder, builder, London, from the designs and under the direction of Mr. Bartleet, of Brentwood, architect.

Brighton.—Among the attractions that Brighton offers to its visitors, the absence has often been remarked of a general lounge or promenade, where, during inclement or unfavourable weather, they might assemble with opportunities for exercise, &c. when the open parades or esplanades are unavailable. To meet this want, a company, entitled, "The Brighton Arcade Company (Limited)," has been formed under favourable auspices. It proposes to erect, on a piece of land between Middle-street and West-street, an arcade and bazaar, some 200 ft. by 50 ft., and which will also form a new public thoroughfare. Everything is to be done to form an agreeable lounge for visitors. In addition to musical entertainments, there are to be a public restaurant, library and reading-rooms, club-rooms, &c. It is not intended to make this arcade a mere emporium for toys, but to apportion it among various trades and professions. The designs by Messrs. Wimble & Taylor, architects, of the eastern and western entrances of the proposed arcade, show the style to be Italian. The western end of the arcade in West-street will face Vallance & Catt's Brewery; the eastern, in Middle-street, the residence of Mr. Rugg, surgeon. The building, we understand, will be commenced at once, as it is the intention of the promoters to open the arcade in the spring of 1865.——A fourpenny rate has been ordered by the council, to pay for the Pavilion, or, rather, to repay the money borrowed for its purchase. The Pavilion has been insured for 25,000*l.*, instead of 15,000*l.*, as heretofore. The council, by the casting vote of the mayor, have refused the Pavilion committee's request, that Mr. Pantaenius be paid 100*l.* on account of his commission for superintending the decorations of the Pavilion, and for his travelling expenses. The council had on a previous occasion paid travelling expenses, and it was urged by the town-clerk and Mr. Alderman Burrows that they ought to pay such expenses. Mr. Burrows said, this was not like building a large house or a church: Mr. Pantaenius had to spend hours and days in watching the work going on and what would be the effect of it when done, also to attend the committee meetings on many days; thus his duties were different from where a church was being built, where the architect could come once a fortnight or three weeks just to see that the brickwork was being done creditably. He believed Mr. Pantaenius was not overpaid: he opposed his appointment, thinking that Mr. Crace ought to have been employed; but he was perfectly satisfied with what had been done. Mr. Pantaenius had to give up appointments in London, and he did not believe he was a gainer in any way, except in reputation.

Weston-super-Mare.—At a recent meeting of the building committee of the proposed hospital, Mr. H. F. Price, architect, presented plans, and stated that he estimated the cost of the erection at about 1,700*l.* The committee said, that the cost was more than they would be able to meet. Mr. Price then produced plans of a smaller building, which would suit as a dispensary and casualty ward fit for the present requirements, and stated he estimated the cost of that building at about 300*l.* After some discussion it was proposed that the site marked out by Mr. Price, and the situation of the building, should be adopted, and Mr. Price was requested to make the latter plans so as to admit of an extension in the building when necessary at any future period.

Liverpool.—The extensive new buildings which have been erected at Woodside Ferry by the Birkenhead Commissioners have been opened for the receipt of tolls. These buildings have been designed to meet the requirements of the largely increasing passenger traffic, as well as to concentrate the arrangements. The buildings are approached by a new road 100 ft. wide, a portion only of which is as yet opened for traffic. The main building, which is entered by doorways of 6 ft. and 12 ft. wide from the approach shed, is 100 ft. long and 50 ft. wide, and forms, with the covered passage leading to the bridge, a commodious apartment. The buildings, owing to the peculiarity of the site, on land but recently reclaimed from the river, and with the view of obtaining a large amount of space at a moderate cost, have been erected of timber, the outer faces sheltered by overhanging eaves. Interior effect has been obtained by the division of the wall space into panels, which will become available for advertisements. The approaches and buildings were designed by Mr. Mills (late surveyor to the commissioners), and Messrs. Lucy & Littler, architects, and the buildings have been erected under their superintendence by Messrs. Holme & Nicol. The approach-road is being completed under the direction of Mr. Thorburn, the present township surveyor.

Sheffield.—The town-council have resolved upon the erection of a police-station adjoining the present Town-hall, preparatory to the enlargement and improvement of that building for judicial purposes.

NEW FREE CHURCH, ST. IVES, HUNTS.

A HANDSOME free church has been opened in St. Ives. The extreme length of it outside is 113 ft.; the extreme width inside, 57 ft. 8 in. The body of the church inside is 74 ft. 6 in. long, and 44 ft. 6 in. wide. The height from floor to the highest point in ceiling is 41 ft. The disposition of the plan in the front consists of an outer open porch, having columns on each side capped with carved capitals. This entrance leads to an inner porch, which has a stone groined ceiling. On each side of this porch are doors communicating with side lobbies and the body of the church. The gallery staircase occupies the right angle, the left being reserved for the side galleries when erected.

At the back of the church is an apse, about 17 ft. deep, the lower part of which is formed into a large vestry, the upper part being an organ and singers' gallery. On one side of this apse is the minister's vestry, and on the other is a staircase, warming chamber, &c. In the front of the apse is arranged a raised platform, which extends the whole width of the church, instead of the usual pulpit. At each angle is a pedestal supporting a brass gas standard, and in the centre the book-board for the minister, which is supported on panelling of tracery. At the rear a cushioned seat extends the whole width of the platform, having a carved back.

There is a gallery at one end of the church. The accommodation is now arranged for about 750 persons.

The main feature of the building externally is a tower and spire of 150 ft. high, which occupies the centre of the front elevation.

The cost of the building, including warming and lighting, will be about 4,000*l.*

The style of architecture is Gothic, of the Decorated period. Four of the windows in the back part of the church have been filled with stained glass of appropriate pattern, by Messrs. Ward & Hughes, of London.

Mr. John Tarring, of Bucklersbury, London, is the architect. The works have been carried out by Mr. Sanders, builder, of London; and Mr. Rothwell, also of London, has put up the gasfittings.

As the church occupies a prominent position in the town, viz., Market-hill, the inhabitants have subscribed a sufficient sum for a new town clock, to be placed in the tower; and a fine clock and bell have therefore been made and fixed by Messrs. Smith & Sons, of St. John's-square, London: the face fronting Market-hill is illuminated.

The church was opened on the 14th inst.

CHURCH-BUILDING NEWS.

Greenwich (East).—Christchurch, Greenwich, East, after being closed for cleansing and repairs, has been re-opened for Divine service. The entire interior has been decorated upon the design of Messrs. Hayward & Pitman, of London. The primitive and complementary colours are blended and toned down. The roof of the church is supported by five beams, placed on brackets abutting from the walls, and extending across the entire width, with the queen-post support, the central part being flat, and having sides shelving to the walls. The entire roof is principally of stained oak, divided into nine rows of twenty-eight panels

each. The central row has a dark ground, each panel being ornamented with a large circle of gold, and on either side the panels are of blue sprinkled with stars. The shelving sides on either side of the flat part of the roof have alternate red and white roses, with corners in blue and white forming quatrefoils, the centre row of panels having an emblem of the Trinity in red, green, and gold, alternately, each panel throughout the roof being bordered in vellum white. A cornice subtends the roof: the mouldings are picked in colour, and a scroll border is painted upon the wall in black and red. The supports upon the beams have vellum-coloured borders, with the chamfers alternately red and green, while the pendants are painted white, blue, and gold. The stone brackets supporting the beams are ornamented. The gallery is of stained oak, having a continuous border of gold, blue, maroon, and white, along the top of the panelling, and similarly ornamented at the bottom. The upright posts between the panels are diapered red and gold alternately, and one side of each post is painted blue, the other maroon. The iron pillars supporting the galleries have capitals decorated, in character with the pendants of the roof. Around the walls, about 5 ft. from the ground, an ornamental border extends of green and red, underneath: the wall is of light green, and above to the roof sage green. The lower part of the chancel wall is painted red, and about 4½ ft. from the ground there is a gold border. Above, this wall has a warm tinted ground powdered with gold crowns and fleur-de-lys, and roses of green and blue alternately.

Ferday Bridge (Ely).—The chief stone of the new parish church of this village has been laid by the Bishop of Ely. The church was commenced on the 25th of April last, and the walls are now nearly ready for the roof. The central stone, laid by the bishop, is said to be "exactly what its name imports, being a plain stone immediately under the middle of the east window, and just above the line of the Communion-table. Its dimensions are 4 ft. 6 in. in length, 1 ft. 9 in. in height, and 2 ft. 5 in. in depth, passing through the thickness of the wall, and appearing on both sides. Its inner face, which is made to project somewhat beyond the face of the wall, is to be carved hereafter so as to form a reredos, should funds be forthcoming." The stonework in general is also for the present to be left in block, the committee desiring to do first such necessary things only as will render the building available in some sort for public use at the earliest period possible. The style of the church is Early Decorated, the materials used being brick and stone; and when completed it will accommodate nearly 300 persons. The interior is not to be plastered, and two string courses of red bricks are introduced among the white, defining the sills and springers of the windows, and continued over their heads. The ground plan forms a Latin cross, comprising the chancel, 24 ft. long by 20 ft. wide, with sacristy on the north and chantry-chapel on the south side, nave 60 ft. long by 25 ft. wide, south-west porch, and north-west clock-tower to be surmounted by a spire. The tower is deferred for the present for want of funds, but the incumbent, at his own expense, has put in the concrete platform on which it will have to be erected; and his brother-in-law, the architect, who has given the plans and specifications and his professional assistance, promises the upper portion of the spire. Owing to the spongy character of the soil, great precautions were necessary to secure the foundations, &c., by means of concrete, cement, and hoop iron, and by making the walls more massive. The architect is Mr. J. H. Owen, of the Board of Public Works, Dublin; and the builder, Mr. C. Bennett, of Lynn. The estimated expense approaches 2,000*l.*

Stafford.—Mr. James Tyrer, of Tixall Hall, has determined to erect, at his own cost, a church for this growing suburb of Stafford, named Castletown, and mainly inhabited by persons employed on the North-Western Railway. The new church is to be erected on a plot of land contiguous to the infant school. The architect is Mr. W. Culshaw, of Liverpool, and the plans and elevations show that it is to be a plain Gothic building, with a bell-turret surmounting the western gable. The windows, except the east and west, are generally single lights. The exterior is to be of gray bricks with bands of blue bricks, the relieving arches of the windows of red bricks, and the dressings of stone. The nave is 75 ft. 6 in. by 37 ft., and the chancel 30 ft. by 20 ft. inside, with vestry and organ-chamber projecting from the opposite sides. The building will apparently seat upwards of 400 persons. The interior of the walls will be plastered, and the roof is to be open, of deal stained.

Chichester.—The re-building of the tower of the cathedral is still progressing rapidly. The new work is now upwards of 120 ft. from the surface of the ground: 6 ft. or 7 ft. more masonry added will carry the work to the level of the walk round the base of the spire. The height of the tower will be (without the embattled parapets and turrets) 127 ft. 3 in., and of the spire, 149 ft. 9 in.; making a total to the top of the capstone of 227 ft. The windows on each face of the tower, which, as in the original, are each distinct in design, are now finished, and the platform upon which the men are employed has been again raised. As soon as the tower is carried to the height above mentioned, the whole of the scaffolding, the value of which is said to be between 1,600*l.* and 1,700*l.*, will be taken down, and the operation of connecting the old work and the new will be commenced.

Winford (Bristol).—The chief stone of a school-church has been laid at Ridgehill, near Winford. This mission- or school-church, is much required, on account of the population of the hamlet being situate nearly two miles from the parish church of Winford. The building will be erected on land purchased by the rector, the Rev. Mr. Tripp, who also defrays the cost of the building, and when finished it will be conveyed to trustees for church purposes. The building has been designed by Mr. Robinson, architect, Leamington; and the work will be carried out by Messrs. Whitcombe & Cutler, of Ridgehill. The church, which is 40 feet by 19 feet, is designed to accommodate 100 persons, and will be of a plain character, the cost being estimated at 200*l.*

Llanfwrog.—The new church here has been opened by the Bishop of Bangor. The edifice has been rebuilt from the foundation. It replaces a small dilapidated single-bodied church, 50 ft. by 15 ft. The orientation is nearly due east, and the church is dedicated to St. Mwrog. The style of the new building is Second Pointed. The walls are built with rubble masonry, the material for which was procured in the neighbourhood, the dressings or ornamental parts being built of Stourton Hill stone. The church comprises a nave, 37 ft. by 17 ft. 6 in.; a chancel, 22 ft. by 15 ft. 6 in., divided from the nave by a stone arch; a south porch; a robing-room, and a bell turret on the west gable. The roofs are of red pine, stained and covered with Carnarvonshire slates. The nave is lighted by two treble-lighted and two double-lighted arch-headed windows; the chancel by a three-lighted arch-headed window in the east gable; and of two windows in the south wall one is a single and the other a double light. The floor within the altar rails is laid with encaustic tiles by Messrs. Maw & Co.; the foliated iron rails, as well as the ornamental ironwork throughout, being from the works of Mr. Brawn, of Birmingham. The passages are laid with black and red tiles, set anglewise, with a buff border. The open seats, pulpit, and reading-desk, which are respectively placed in the north and south piers of the chancel arch, and altar table, are of red pine, stained. The building will accommodate 135 persons. The cost of the undertaking will be about 600*l.* Messrs. Kennedy & Rogers, of Bangor and London, were the architects; and Mr. T. Davies, of Llanerchymedd, the builder.

Reading.—The repairs now going on in the upper part of the tower of St. Lawrence's Church have been rendered necessary by the discovery that the massive oak beams used in the structure have become entirely decayed and little better than touchwood: this has resulted from flaws in the lead roof, through which for many years the rain has penetrated, and by degrees completely rotted the whole of the wood. The beams weigh nearly a ton each. The period of the building is calculated to have been about 1434. The repairs are being carried out by Mr. Matthews, builder, of Reading. The expenses, according to the local *Mercury*, will be defrayed from funds derivable from Church property. St. Lawrence's tower is 90 ft. high, exclusive of the pinnacles; and most of the bells have been recast since the year 1574.

Beverley (Yorkshire).—Steps having been taken since last Christmas for the complete restoration of the nave of St. Mary's Church (the chancel having recently been completed), Mr. Scott was consulted; and the work is now commenced under his instructions. The whole of the interior fittings (except the two pews, organ, and loft) have been removed, and the floor of the nave entirely bared. The flags, many of them bearing old inscriptions, one not less than 200 years old, have been temporarily taken up, and the level of the church will be somewhat altered. The inner surfaces of the walls have been found in bad condition, and require large repairs. The bases of the pillars are much out of order; but this, with the other repairs, will occupy some months. The church is to be refitted with open stalls, and the pulpit is to be fixed at the north-east angle, and the reading-desk on the opposite side. The ceiling is to be painted blue, and studded with stars.

ROMAN CATHOLIC CHURCH-BUILDING NEWS.

Sheerness.—The new Roman Catholic Church at Sheerness has been formally opened for divine service. The edifice is situate near the sea-wall which borders the whole of this portion of the coast. It is in the Transition style, and has been erected from designs furnished by Mr. Pugin, of Ramsgate. The ground plan comprises a nave and chancel, together 112 ft. long and 48 ft. wide, including side chapel and aisles; and the building is erected of pricked stock bricks, with dressings externally of Bath, and internally of Caen stone. The nave and aisles are extremely simple, nothing being expended on mere ornament. The chancel terminates in an apse, and contains seven tracery windows, which are enriched by moulded columns, hood-moulds, and caps, the latter supporting the ribs, which carry the groined ceiling. The nave roof measures 57 ft. from the apex to the floor-line, and is divided by main and intermediate principals in each bay, which are again partly subdivided by ribs and panels, and partly open. The roof of the aisles is open, and framed with knee-pieces, resting on wall-plate. The whole of the timbers have wrought-iron roses, painted and gilt. The lady-chapel contains a rose window and three lancets. The roof is panelled. The altar is worked in Caen stone, enriched with marbles, and was executed by Mr. Earp, of London. The organ gallery is supported by a simple stone arch, going the entire width of the nave, springing from stone corbels and abutments. The cost, which includes everything connected with the building, from the sacristy fittings to the high altar, amounts to nearly 1,000*l.* The work has been executed by Messrs. Smith & Son, of Ramsgate. The internal metal-work, which is simple in design, was by Mr. Hardman, of Birmingham.

Stourbridge.—A new church has been opened here for divine service. The edifice is situate nearly in the centre of the town, at a junction of two streets, the west front facing Kidderminster-street. It is designed in the full Decorated period of the Gothic style, and has been built from the designs of Mr. Pugin. The ground-plan comprises nave and aisles, tower at the north-west angle, chancel, two side chapels, and a sacristy. The dimensions are,—Length, 120 ft.; breadth, 52 ft.; height, 57 ft. The building is principally erected of Stourbridge red firebrick, with dressings of Bath stone. The work has been entirely carried out by Mr. Ife, of Stourbridge.

COMPENSATION CASES.

At the Lord Mayor's Court, last week, before Mr Commissioner Kerr and a special jury, a compensation case, "Jones and Cohen v. The London, Chatham, and Dover Railway Company," occupied the whole day in assessing the amount to be awarded for three freehold houses in Fleet-lane, of which the claimants were trustees. Mr. Serjeant Parry and Mr. Raymond were for the claimants, and Mr. Hawkins, Q.C., with whom was Mr. Gadsden, for the company. A peculiar circumstance was disclosed in this case. It appeared that some negotiations had taken place between the surveyor of the company and a gentleman on the other side, and that the houses were actually pulled down some time since without the knowledge of Mr. Cohen, the acting trustee. A sum of 1,760*l.* had been agreed upon, but Mr. Cohen repudiated that sum as totally insufficient, and claimed 5,000*l.* Evidence was given of the rise of property in the City, and that three companies had been established to purchase property in the City for the purpose of selling it again at a good profit. On the part of the claimants, the highest value put on the property was 2,600*l.*, which includes 10 per cent. for compulsory sale. On the part of the company, 1,760*l.* was proved by witnesses to be the full value, and that sum had been paid into court. As the property would have been sold next year, the 10 per cent. was alleged not to be necessary. Mr. Commissioner Kerr, in placing the case before a jury, remarked on the difference in the evidence of valuers where railway companies were concerned. For his own part he should like to see valuations made as between John Jones and Thomas Smith. As to 10 per cent. for a compulsory sale, he could not see why it should be allowed in all cases, but it was a question for the jury. The jury awarded as compensation 2,450*l.*

Miscellanea.

PROVIDENT INSTITUTION OF FOREMEN AND CLERKS OF WORKS.—The dinner in aid of this Institution will be held on the 27th inst. at the London Tavern, and deserves support. Mr. J. Taylor will preside, and Mr. S. Tricket will occupy the vice-chair.

MEMORIAL OF SHAKSPEARE. — A drinking-fountain has been erected at Black Gang, at the back of the Isle of Wight, dedicated in an inscription "to the memory of Shakspeare." The fountain has been erected by Mr. Letts, a gentleman residing at Black Gang.

ROYAL SCHOOL OF NAVAL ARCHITECTURE, SOUTH KENSINGTON.—The Committee of Council on Education having appointed Dr. Woolley as Inspector and Director of Studies, and Mr. C. Merrifield as Principal, have named as Vice-principal Mr. Parkiss, the Senior Wrangler and First Smith's Prizeman in the present year.

FATAL ACCIDENT TO AN ARCHITECT.—At York, recently, Mr. Hornsey, architect, while measuring some old walls of a tile-kiln which were to be taken down and rebuilt, was killed by the fall of the roof upon him. The local papers state that he was much respected, and that his untimely death will be regretted by a large circle of friends.

ST. MARY'S TOWER, TAUNTON, STRUCK BY LIGHTNING.—On Saturday in last week a very severe thunder-storm burst over Taunton, accompanied by torrents of hail and rain. Whilst the storm was at its height, the pinnacles and parapet of St. Mary's tower were struck by lightning, and large quantities of the ornamental stonework were thrown to the ground, and a quantity of lead roofing melted. The tower, as our readers will recollect, has only been completed a year or so, having been just rebuilt at a cost of 9,000*l.* or 10,000*l.* So far as the damage can at present be ascertained, it is estimated that it will cost only about 40*l.* to restore it.

STATUE FOR THE THAMES EMBANKMENT. The Metropolitan Board of Works, at their meeting to-morrow (23rd), are to receive a report from the Thames Embankment Committee, stating,—That having considered the letter from the First Commissioners of Her Majesty's Works, &c., relative to the erection of a statue of Sir James Outram, on land reclaimed by the Thames Embankment, they are of opinion that the application should receive the most favourable consideration of the Board, the question of the exact site, and other details, being reserved for future determination.

DISCOVERY AT ST. BARTHOLOMEW'S, SMITHFIELD.—During the works now in progress for the enlargement and restoration of St. Bartholomew's, the workmen engaged in excavating on the north side of the parochial boys' school, which bears the appearance of great antiquity, in order to lay bare the immense and massive buttresses of the priory walls, and also in excavating in the interior of the chancel, discovered several leaden coffins, no doubt containing the remains of the monks and friars belonging to the priory. The coffins being securely soldered it is not intended to have them opened, and they will consequently be removed to a place of sepulture. Large quantities of remains have been dug up.

THE FITZROY MARKET RAGGED SCHOOLS, TOTTENHAM COURT ROAD.—The ragged schools are doing so much good, in a quiet and unpretentious way, that we are always glad to hear of their success, and as sorry to hear of their adversity. The Fitzroy Market schools, we much regret to learn, have been robbed to what is to them a serious extent, and efforts are being made to replace what the thieves have stolen. The most grievous circumstance in the affair is, that all the articles of clothing belonging to the poor mothers, and to the night industrial classes, have been stolen, as well as the reserve stock of sheeting, calico, flannel, and a good deal of other property; and the funds of the society had all been expended on that stock. The ladies' committee, therefore, earnestly appeal to the generosity of the public for help in this strait; so that the poor women, especially, who have been sufferers by this heartless robbery, may have their clothing replaced. Miss Oxley, the hon. sec., 16, Grafton-street, Fitzroy-square, W., will receive contributions; also Miss Stableford, the treasurer, at 59, Devonshire-street, Portland-place, W.

THE SOCIAL SCIENCE CONGRESS IN YORK.—As already announced the eighth annual meeting of the National Social Science Association will commence in this city, on, this, Thursday, and will terminate on the Thursday following. The questions for discussion by the members of the Congress are very numerous and important, and the meeting promises to be a good one.

ARCHITECTURAL PRIZE, PARIS.—The Duc de Valmy has placed at the disposal of the Academy of Fine Arts the sum of 1,500 francs, to be given to the author of the best essay on a general question of architecture. The Academy has in consequence published the following theme:—"To explain principles and rules of architecture; to develop the theory of the art as applicable to our epoch." The essays are to be sent in on or before the 15th July, 1865.

MONUMENTAL.—The bronze equestrian statue of the Prince Consort has been formally inaugurated at Halifax. The cost of the statue was met by public subscription some time ago; and when the form which the memorial was to take had been decided upon, the work was put into the hands of Mr. Thornycroft, of London. The statue and pedestal measure 18 ft. from the ground. The horse has been modelled from one in the possession of her Majesty, named Nimrod. The statue has been cast by Messrs. Elkington, Birmingham, and weighs a ton and a half. The ancient sand process was employed. Messrs. M'Donald & Field, of Aberdeen, have supplied the pedestal, which is of unpolished grey granite. The total cost of the statue is 1,300 guineas.——An obelisk in memory of the late Mr. J. R. Farquharson, of Invercauld, has been erected in the grounds of Invercauld. The Brethren of St. Nathalan Lodge of Freemasons (No. 259), Tullich-in-Mar, of which Lodge the deceased gentleman had held the position of Right Worshipful Master for many years, laid the foundation-stone of the monument with full Masonic honours.

THE OLDEST CHURCH IN THE SOUTH OF ENGLAND. It having been agreed at a vestry meeting, by the consent of about six of the ratepayers, that the old church of Selsey should be torn down, and a new one built near the village, the following remarks were made by one of the inhabitants:—"On the site where the church now stands was a place where the ancient Britons performed their religious worship, as witness the mount. On the south-eastern corner of the churchyard the Romans built their church, as witness old foundations if you dig below the surface. In England, Christianity was first preached at Selsey, probably on the very site where the church now stands, and tradition says that one of the twelve apostles preached at Selsey. The site is one where religious service has been performed most probably for upwards of 2,000 years. Can it be possible for the present generation to remove it? The church is the oldest in the south of England, if not in England, and a few years since was put in good repair: at a trifling expense it would now last for ages."

THE OLDEST PAVEMENT IN OR NEAR THE CITY. By far the most ancient paving either in or near the city of London is to be found in Trinity-square, Tower-hill. There are portions of the early roadway still remaining in the four angles of the irregular-shaped plot of ground forming the so-called "square," at each of the corners, where they may now be seen; and forming, as they undoubtedly do, from the rubble of which they are composed, with the boulders, coggles, limestone, and cement ordinarily used in the erection of walls and bastions in the early times, these remains may be considered as furnishing most interesting, and probably unrivalled, specimens of road-making in the City and its more immediate precincts long before the Great Fire, in 1666. There are also closely contiguous to these peculiar spots of pavement some very old houses, especially the Coopers' Arms, at the corner of the square (or rather oval) nearest Barking Church, and at the companion corner, near George-street, still stands the Old George Tavern, which is shown upon the maps published before the Great Fire. This "hostelrie" possesses all the features of antiquity. It is of timber, with a penthouse front forming a balcony, still used as a pleasant retreat, with trees before it, looking over the gardens and the (now dry) moat of the Tower and within full view of which stood the block and the gallows in the sixteenth century, as shown in Ogilvy's and other maps of the period. *City Press.*

THE LATE DESTRUCTION OF PROPERTY AT LIMOGES.—The Council of State has just authorized the town of Limoges to make a loan of ten million francs for the purpose of reconstructing the quarter that was burnt, and executing other important works.

A DISPENSARY FOR BARNSLEY.—This place has just had the good fortune to have presented to it a large building for a dispensary, and a sum of 5,000*l.* for its maintenance. The gift is from Mr. Staniforth Beckett, of The Knoll, Torquay.

THE WORKING CLASS INDUSTRIAL EXHIBITION FOR MARYLEBONE.—A public meeting has been held in Great Portland-street School-room, to promote this Exhibition, when resolutions were, after discussion, unanimously passed, pledging the meeting to promote the same to the utmost of its power; soliciting the co-operation of the gentry; and appointing a committee to carry out the details. The promoters propose that the Exhibition should take place about Christmas time.

RAILWAY BRIDGE BETWEEN SOUTHWARK AND THE CITY.—During the last week the contractors commenced fixing the first girders for the railway bridge between Bankside and Thames-street, intended to carry the South-Eastern Railway at London-bridge, and the Charing-cross Railway in the Strand, to the Central City terminus of those companies in Cannon-street, City. The land, arches, and abutments on both sides of the river are completed, and the sinking of the cylinders is progressing.

ALTERATION IN THE NAMES OF THE METROPOLITAN THOROUGHFARES.—The following alteration in the names of some of the principal metropolitan thoroughfares has just been effected by the Metropolitan Board of Works:—Bricklane and York-street, St. Luke's, Finsbury, is now Central-street; and John's-row and Wilmington-street, in the same locality, are merged into one thoroughfare, and named Levers-street. Southampton-street, Russell-square, is now called Cosmo-place. The distinction of Great and Little Russell-street, Covent Garden, is abolished, and the two are now Russell-street. Holloway-road now extends from Upper-street, Islington, to the Great Northern railway, and the host of terraces, places, buildings, &c., are all merged into one common nomenclature, Holloway-road. The road has been entirely renumbered, the numbers running from north to south, the odd numbers on the west, and the even on the east. Pitfield-street, Hoxton, now extends from Old-street-road to the New North-road, and Haberdashers' Walk and Place no longer exist. Foley-place, Marylebone, has been renamed Langham-place. Marylebone-street, Regent-street, is now called Glasshouse-street; and Queen-street, Golden-square, is now Denman-street. Numerous other alterations are in contemplation.

THE CASTLE HOWARD TUMULI.—An examination of the British graves on the Castle Howard estate, in the North Riding of Yorkshire, has been commenced. In one tumulus, about 30 yards in diameter, and having an altitude of about 8 ft., which had never previously been disturbed, the excavation was commenced on the north side, and was driven, about 9 ft. in width, completely through to the south. The evidences of fire increased towards the centre until twelve distinct sections of charcoal layers, interspersed with others of burnt earth and stones, but with very few bones, were discernible. About the centre, burnt stones and a few bones were found as a distinct deposit, about 3 ft. deep, and here the workmen were surprised to find a layer of concrete material increase so rapidly in thickness that it presented all the appearance of a concrete floor, hard as a flag,—indeed, the construction of the tumulus was very remarkable, and altogether unusual. In the centre of this large concrete floor or platform a magnificent scalloped or pectinated urn was found, but there were no bones along with it. From beneath the urn, attached by clay to the bottom, a flint implement was taken, having a dentate edge, yet sharp as a saw, which it resembled. The large area and magnitude of the burning, of which the evidences were profuse, seemed to account for the almost entire consuming of the body, of which hardly a vestige was discoverable. But a rabbit-burrow also passed right through the barrow and just over the urn, and in this way bones may have been removed from their intended resting-place. The platform or floor upon which the burial had been made appeared to have been constructed with great care.

WORKMEN'S INDUSTRIAL EXHIBITION AT TUNBRIDGE WELLS.—This exhibition, which was under consideration, it seems, even prior to the opening of the Lambeth Exhibition, has now been opened. The town-hall was intended to have been used, but it was found too small, and Cramp's Riding-school has been taken for the purpose. The ex-Queen of the French was present at the opening. The inaugural address was delivered by the Hon. F. G. Molyneaux, and in the evening a concert was given by the Choral Society. The articles exhibited are said to be very numerous.

THE BRIGHTON ART SOCIETY'S EXHIBITION.—The eleventh annual exhibition of paintings of the Brighton Art Society, has been opened to the public, as usual, in the two rooms at the Pavilion, which were some years ago fitted up for the purpose by the town surveyor. The number of pictures is 442, of which 238 are in oil: the remainder are in water-colour; and there are also a few specimens of statuary. The number of artists who contribute to the exhibition is about 160, among whom there is a goodly sprinkling of natives of the county. Speaking generally, the exhibition is regarded, says the local *Herald*, as fully sustaining the character of the society. The interest of the exhibition was enhanced by the presence of a selection of pictures from the Sheepshanks Collection, at South Kensington.

CHESTER TOWN HALL.—The town council have resolved "that the design 'Love's Labour,' by Messrs. Lanyon, Lynn, & Lanyon, be adopted, and that the same be carried out; but that the council defer deciding on erecting the tower till tenders are obtained; that Messrs. Lanyon, Lynn, & Lanyon be requested to prepare the working drawings and specification with and without the tower; and that the committee be authorized to advertise for tenders in stone, and brick and stone, as soon as the working drawings and specifications are ready." The building committee had previously requested Messrs. Lanyon, Lynn, & Lanyon to send in an elevation both in brick and in stone, with an estimate of cost; and the architects did so, stating that they estimated the cost in brick, without a tower, at about 15,000*l.*, or with the tower 1,500*l.* more; but advising the construction to be of stone, which could be had from the neighbourhood, and could be used at not much greater cost. In speaking of the cost in brick, the architects say,—"The estimate of the cost per cubic foot has been arrived at from information derived from builders and others in Chester, on whose judgment we believe reliance may be placed. The contractor for the new hotel in Eastgate-street, states that the building on which he is there engaged is being carried out at the rate of 4¼d. per cubic foot. By reference to the accompanying elevation, it may be seen that the style of work therein proposed (with the exception of the stone balustrade and cornice round the building) is not in any way more expensive than that of the hotel. However, to learn what may be considered to be a full margin, we have calculated the whole of the front building at 5d., or ¾d. more per cubic foot than the hotel. The central tower, as here assigned, though not much more expensive in proportion, is calculated at 9d. per foot, to allow for extra cost of scaffolding, labour, &c.; the octagonal tower at 6d.; and the remainder of the building, courts, &c., at 4d." Mr. Lynn was of opinion, though no estimate had been made, that the building could be erected in stone for 20,000*l.* We agree with the architects in thinking that the council ought to build their new town-hall in stone.

TENDERS.

For alterations at 303, Kentish-town-road, for Mr. Robinson. Mr. Manning, architect:—

Kent	£175	0	0
Allen	158	0	0
Abbott	148	0	0

For three houses at Peckham, for Mr. Noldwritt. Mr. Henry Jarvis, architect:—

Marsland & Son	£2,660	0	0
Sawyer	2,487	0	0
Aldred & Doulton	2,380	0	0
Henshaw	2,300	0	0

For alterations at the Norwich Equitable Fire Office. Mr. T. D. Barry, architect:—

Lacey (accepted)	£730	0	0

For enlargement of the schools, Thorpe Hamlet, Norwich. Mr. T. D. Barry, architect:—

Plummer & Bloom (accepted)	£538	0	0

For new premises, London-street, Norwich, for Mr. G. C. Stevens. Mr. T. D. Barry, architect:—

Lacey (accepted)	£740	0	0

For the erection of Birkenhead Industrial Schools, "Albert Memorial." Mr. David Walker, architect. Quantities supplied by Mr. W. M. Boden:—

Jones & Lewis	£6,824	0	0
Harkness & Dempstie	5,989	0	0
Chester & Co.	5,950	0	0
Black	5,919	0	0
Cameron	5,899	0	0
Neill (accepted)	5,700	0	0
Roberts	5,683	0	0
McKenzie	5,330	0	0

For building a house, offices, and stabling at Streatham, for Mr. James McGrouther. Messrs. Scurry & Wright, architects:—

Fish	£4,360	0	0
Patman & Fotheringham	4,277	0	0

RAILWAY and ESTATE SURVEYING and LEVELLING,
In any Part of the Country.
By C. C. No. 17, Hill-street, S.W.

LAND, ENGINEERING, and MINERAL SURVEYS EXECUTED. Maps Revised or Copied, Parishes and Estates Valued, Civil Engineers Assisted on Railway Surveys, &c. by ROBERT ELLIOTT, 17, Corn Market, Derby.

A PARTNER, with moderate Capital, WANTED, in a very old-established Business, as GENERAL CONTRACTOR, PLUMBER, and DECORATOR, within ten miles of London. Upon inquiry this will be found to be a most genuine and bona fide Business, consisting of first-class resident Gentlemen of the neighbourhood, from whom the Advertiser receives great patronage. The trade would be greatly increased if a London business were connected to it.—Application to be made (by letter only) to M. H. Esq. Office of "The Builder," with name and address.

A COMPETENT DRAUGHTSMAN, to get out general and working drawings for RAILWAY WORKS, is REQUIRED by Messrs. STEVENSON & TILEY, Halifax.—Applicants to state previous engagements and salary required.

AN ARTICLED PUPIL can be received into the Office of an Architect and Civil Engineer, where he would have unusually good opportunities for acquiring a knowledge of the professions.—Address, A. B. Z. care of Mr. Halsford, No. 59, High Holborn, W.C.

A PORTER WANTED, for a TIMBER YARD. None need apply who have not been used to a similar situation.—Apply to B. MOSS & CO. 45, Leman-street, Whitechapel, E.

A RESPECTABLE YOUTH WANTED, in an Architect's Office.—Apply, by letter, stating age and other particulars, to EDWARD FALKENER, Esq. 61, Gracechurch street.

BOROUGH of STOCKPORT.—WANTED, an experienced ENGINEERING and ARCHITECTURAL DRAUGHTSMAN.—Applications, accompanied by testimonials, stating age, present employment, and salary expected, to be addressed to Mr. ALEXANDER TAYLOR, C.E. Borough Surveyor of Stockport, not later than OCTOBER 5th, 1864.

TO SMITHS, &c.
FOREMAN WANTED, in a Manufacturing Business in London. He must be thoroughly acquainted with all the branches of the trade, able to set out work for the workmen, and to make himself generally useful.—Address, in own handwriting, stating terms, &c. to L. D. E. Office of "The Builder."

TO STONE MASONS.
HAND WANTED.—A good GENERAL HAND, wishing to settle, can have constant EMPLOYMENT Apply to Mr. MARSH, Andover.

WANTED, immediately, by a Civil Engineer and Surveyor, an experienced DRAUGHTSMAN, who has some knowledge of surveying. Salary, 130l. per annum. Applications with testimonials, stating age, addressed to Mr. TWIGG, Vestry hall, King street, Battersea.

TO ARCHITECTS' ASSISTANTS.
WANTED, immediately, in an Architects' Office, an ASSISTANT, able to get up drawings from rough sketches, and well versed in details. Must be a good perspective hand, and if an artistic colourist, preferred. Good references indispensable. Apply by letter, stating salary expected, addressed, ARCHITECT, Box 164, Post-office, Newcastle upon Tyne.

TO JOBBING SMITHS AND BELLHANGERS.
WANTED, a good JOBBING SMITH and BELLHANGER. One from the country preferred.—Address, stating age, wages, &c. Mr. O PITTS, Builder, Walham-green.

WANTED, in an Architect and Surveyor's Office, a competent ASSISTANT. He must be an expeditious draught man, able to prepare finished and detailed drawings, and possess a thorough knowledge of surveying and levelling.—Apply to Mr. ELKINGTON, 33, Cannon-street, City, between Four and Five o'clock.

TO ARCHITECTS' ASSISTANTS
WANTED, a well-qualified ASSISTANT, thoroughly versed in construction, and ready in preparing architectural details.—Apply, by letter or personally, to Mr. H. DAWSON, 16, Finsbury place South, on MONDAY and TUESDAY next, between TEN and TWELVE o'clock.

TO CLERKS OF WORKS.
WANTED, in the Country, a practical and experienced CLERK of WORKS to Superintend the Restoration of an Ancient Building. A thorough knowledge of masonry, particularly in restoration, with a fair knowledge of drawing and measuring accounts, will be required.—Application, in writing, accompanied by testimonials, to be addressed A. E. PERKINS, Architect, 9, College-yard, Worcester.

WANTED.—Good FRET-LEAD GLAZIERS for Stained Glass.—Apply to WARD & HUGHES, 67, Frith-street, Soho square, W.

WANTED, in an Office in the Country, for two or three months, an Experienced Person, who must be competent to MAKE WORKING DRAWINGS of Sewers and Roads, take levels and make sections thereof, and have a knowledge of architectural drawing. He must also write a good hand, and make himself generally useful.—Apply to Mr. W. READ, Surveyor, Woodstreet, Swansea. Wilts, stating particulars of last situation, and salary per month required

WANTED, a CLERK of WORKS, for a Chapel in one of the Midland Counties.—Apply, by letter only, stating terms, qualifications, and references, to Mr. W. F. POULTON, Architect, Victoria-road, Reading.

WANTED, a DRAWING CLERK, capable of setting out working drawings; one used to Engineers' and Builders' detail preferred. Salary, 30s. per week.—Apply to BUNNETT & CO. 17, Queen-street, City.

TO ALL IN WANT OF HELMET DIVERS.

TWO MEN, of many years' experience in the Diving Department, will shortly require a RE-ENGAGEMENT, at home or abroad. They understand the galvanic battery, also the preparing of waterproof charges for the blasting of rocks, or other work. Will take the labour of blasting and raising of rocks, or other wise.—Address, A. B. care of Mr. W. Hooke, No. 115, Charles-place, Prince of Wales-road, Camden-town, London.

TO LAND SURVEYORS

TWO ASSISTANTS, disengaged in a month, wish for SITUATIONS. Both are good surveyors and draughtsmen, and one is a first-class map writer.—Address, H. S. Post office, Ashford, Kent.

TO ENGINEERS AND CONTRACTORS

TWO Experienced ENGINEERING SURVEYORS are open to ENGAGEMENTS, or to Treat for the Survey or Laying out of other Works. No objection to go abroad. Good testimonials or references.—Address, DELTA Post office, Wolverhampton.

TEMPORARY ASSISTANCE in the PREPARATION of PERSPECTIVE VIEWS, General or Detail Drawings, Surveying, &c by the Advertiser, who is well qualified.—Address, A. A. Office of "The Builder."

TEMPORARY ASSISTANCE.—The Advertiser offers the above at his own Rooms or in an Architect's Office. Can prepare and colour perspectives.—Address, S. I. A. No. 1, Oxford-terrace, Capland Road.

AS DRAUGHTSMAN.—The Advertiser, aged 25, is desirous of a RE-ENGAGEMENT. Has been accustomed to make ornamental and working drawings in a manufacturer's firm, and to assist occasionally at the books.—Address, M. N. 7, Brunswick-terrace, Waterford-road, Fulham, S.W.

TO GASFITTERS AND BRASS FINISHERS.

A YOUNG MAN wishes for an ENGAGEMENT in the above line as an IMPROVER.—Address, L. M. care of Mr. Coulton, Printing Office, New Brentford.

AN Architect, with thoroughly practical experience, desires to undertake the SUPERINTENDENCE of Buildings and Works in Progress for other Architects. Terms moderate, and time seeking arrangement. Working and detail drawings, and specifications prepared, if desired. Unexceptionable references.—Address, A. B. T. 33, Arthur grove, N.W.

TO BUILDERS.

A YOUNG MAN, aged 27, desires a RE-ENGAGEMENT as BUILDER'S CLERK. Experienced in measuring, estimating, and superintending works. Also understands the general routine of a builder's business. Good references.—Address, R. J. Office of "The Builder."

TO ARCHITECTS.

A FIRST-CLASS ASSISTANT is desirous of an ENGAGEMENT. Has studied on the Continent for a year, and been in practice for nine years. Has a thorough knowledge of Gothic. An ecclesiastical office preferred.—Address, A. B. C. H. 6, Mary-terrace, High-street, Camden-town, N.W.

A GOOD Practical THREE-BRANCH HAND is open to an ENGAGEMENT. Good references if required.—Address, C. R. 15, Mortimer-street, Cavendish-square, W.

TO ARCHITECTS.

A GOOD GENERAL ASSISTANT, of about ten years' experience, is open for an ENGAGEMENT First class references.—Address, A. N. Office of "The Builder."

TO ARCHITECTS AND SURVEYORS.

A FIRST-RATE DRAUGHTSMAN and GENERAL ASSISTANT desires an ENGAGEMENT. Town or country.—Address, ALPHA, 26, Farnborough-terrace, Bridge-road West, Battersea.

TO BUILDERS.

AN active, well-educated Man, Carpenter and Joiner by trade, is open to an ENGAGEMENT, to Take Charge of an Out-door JOB, or Alterations and Repairs, or to Manage a small business. Can prepare detail and working drawings. Address, A. B. No. 2, Belvoir-terrace, Vauxhall Bridge-road.

A PRACTICAL CLERK of WORKS, just completing a country mansion, is open to a RE-ENGAGEMENT. Is a fair draughtsman, and can set out, carry up and measure up works of any magnitude. First-class testimonials from past and present employers.—Address, A. J. 1, Eden-terrace, Battersea, London, S.W.

AN efficient Estimating, Measuring, and Quantity CLERK, of considerable practical experience, used to taking out works and will up in builders' and contractors' accounts, REQUIRES an ENGAGEMENT. References undeniable.—Address, G. B. Mr. Luckhurst, Stationer, 209, Queen's-road, Dalston.

TO PAINTERS, SIGN AND ADVERTISING WRITERS, AND OTHERS.

A GOOD WRITER (can do Graining, if required) is open to a permanent ENGAGEMENT; or would take a Job by the piece. No objection to the country.—Address, R. B. Wood's Coffee-house, 34, Seymour-place, Bryanstone-square.

A BUILDER'S GENERAL FOREMAN, who has just completed some extensive works in the country, seeks an ENGAGEMENT. Is used to Engineering in London work, and the management of workmen.—Address, A. Y. Z. No. 31, William-street, Regent's Park, N.W.

TO BUILDERS.—TO BE DISPOSED OF, on account of the death of the Proprietor, an excellent old-established BUILDER'S BUSINESS, for many years successfully carried on by the late Mr. Robert Curtis, at Romford.—For particulars apply to Mr. S. FLETCHER, Auctioneer, Romford, Essex.

TO PLUMBERS, GLAZIERS, and HOUSE DECORATORS.—A genuine BUSINESS, in a first-rate SITUATION, to be DISPOSED OF.—For particulars apply by letter, inclosing stamp, to L. N. Post-office, High-street, Camden Town, N.W.

TO BUILDERS, DECORATORS, and OTHERS.—TO BE DISPOSED OF, a GENERAL BUSINESS, established ten years, in a west central neighbourhood of great respectability (the proprietor being about to retire).—Address, by letter only, to Messrs. FENTON & NICHOLSON, 65, Goswell-road, E.C.

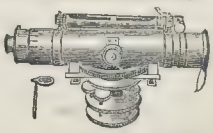
TO PLUMBERS and PAINTERS.—Mr. WINN, House Agent, Sidney-street, City-road, has a capital BUSINESS in the above line to DISPOSE OF immediately, in consequence of the Proprietor being advanced.—Price, including Stock, fixtures, tools, &c 65*l*. Worth double.

TO BRASS and COCK FOUNDERS and FINISHERS.—TO BE DISPOSED OF, through ill health, a BUSINESS in the above line, established upwards of sixty years, doing a thorough good trade.—For particulars, apply to Mr. EPPLAND, Chemist, 14, Waterloo-road. N.B. As this is genuine, no agents.

MONEY on FREEHOLD and LEASE-HOLD PROPERTY, by the MUTUAL LOAN FUND ASSOCIATION (Incorporated by Act of Parliament, 18 & 19, RUSSELL STREET, COVENT GARDEN, W.C. Advances from 10*l*. to 100*l*. upon Freehold and Leasehold Property, for any term up to ten years. Mortgages redeemed, and the advance can be repaid by easy instalments. Facilities all ded to tenants to purchase the houses they occupy, and the repayment of the advance taken as rent. Greater advantages are offered to borrowers than in building societies, there being no shares to subscribe for, or competition for an advance, and no deduction from the loan. No preliminary fees. Prospectus and forms of proposal sent on receipt of a directed stamped envelope.
EDWARD HARPER, Secretary.

MONEY.—IMMEDIATE CASH ADVANCES on FREEHOLD and LEASEHOLD PROPERTY, REVERSIONS and ANNUITIES, WINE, SPIRIT, and TIMBER WARRANTS, FURNITURE, SHARES, &c.
Mr. RICHARD CROSSLEY, 17, Moorgate-street, Bank, E.C.

£1,000 IN CASE OF DEATH, or an Allowance of 6*l*. per week while laid up by Injury caused by ACCIDENT OF ANY KIND, Whether Walking, Riding, Driving, Hunting, Shooting, Fishing, or at Home, may be secured by an Annual Payment of 3*l*. to the RAILWAY PASSENGERS' ASSURANCE COMPANY. MORE THAN 8000 CLAIMS FOR COMPENSATION HAVE BEEN PROMPTLY AND LIBERALLY PAID. For particulars apply at the Offices, 10, REGENT-STREET, and 64, CORNHILL. WILLIAM J. VIAN, Secretary.



ROYAL POLYTECHNIC.—PAGANINI'S GHOST.—Engagement of this novel, extraordinary, and attractive sensation, which was received with such an enthusiastic furore upon the first night of its production on Monday last. Illustration. Paganini's Ghost will perform duty, at 4 and 9, all the difficult variations on one string and with one hand for which the late Paganini was so celebrated. Polytechnic re-decorated and re-opened. Admission to the whole, 1s.

JOHN ARCHBUTT & SONS,
20, WESTMINSTER BRIDGE ROAD, LAMBETH,
Near Astley's Theatre,
Respectfully inform the Public that their Illustrated Price List will be forwarded free on application. The prices will be found remarkably low. Every article warranted. Second-hand Instruments of all kinds, by the best makers, always in stock.

GUTTA-PERCHA MILL-BANDS.—The Gutta-Percha Company beg to state that the increasing demand for the Gutta-Percha Strapping for Driving-bands, Lathestraps, &c. fully justifies the strong recommendations they have everywhere received. Their durability and strength, permanent contractibility and uniformity of substance; their non-susceptibility of injury from contact with salt, grease, acids, alkalies, or water; and the facility with which the only joint required can be made in bands of from 200 to 300 feet long, render them superior to leather for almost all working purposes, and decidedly more economical. Every variety of Gutta-Percha Articles, such as Tubing, Soles, Pump-buckets, Fire-buckets, Bosses, Union joints, Flasks, Bottles, Bowls, Toilet-trays, Curtain-rings, Galvanic Batteries, Talbotype Trays, &c. &c. manufactured by the Gutta-Percha Company, and sold by their Wholesale Dealers in town and country.
THE GUTTA-PERCHA COMPANY, PATENTEES, WHARF ROAD, CITY ROAD, LONDON.

KAMPTULICON FLOOR CLOTH, DURABLE, COMFORTABLE, ECONOMICAL, and ORNAMENTAL, for CHURCHES, PUBLIC BUILDINGS, BILLIARD ROOMS, and PRIVATE HOUSES.

LIFE DEPARTMENT.—Under the provisions of an Act of Parliament, this Company now offers to new Insurers EIGHTY PER CENT. OF THE PROFITS, AT QUINQUENNIAL DIVISIONS OR A LOW RATE OF PREMIUM without participation of Profits.
Since the establishment of the Company in 1821, the amount of Profits allotted to the Assured has exceeded in Cash value 600,000*l*. which represents equivalent Reversionary Bonuses of 1,500,000*l*.
After the Division of Profits at Christmas 1859, the Life Assurance in force, with existing Bonuses thereon, amounted to 8,000,000*l*. 4,730,000*l*. the Income from the Life Branch 207,000*l*. per annum, and the Life Assurance Fund, independent of the Capital, exceeded 1,818,000*l*.
FIRE DEPARTMENT.—Insurances are effected upon every description of property, at home and abroad, at moderate rates.
No expense is incurred in effecting a New Insurance beyond the payment of the Annual Premium and Duty, when the Premium amounts to 5*s*.
Claims liberally and promptly settled.
Notice is hereby given, that Fire Policies which expire at Michaelmas must be renewed within fifteen days at this Office, or with Mr. SAMUEL Nott, 18, Chancery-street, corner of Fall-mall; or with the Company's Agents throughout the kingdom; otherwise they become void.
Applications for Prospectuses and Agencies to be made to the Secretary.

Insurances against Loss by Fire are effected by the Phœnix Company upon every description of Property, in every part of the world, on the most favourable terms.
The promptitude and liberality with which its engagements are always met by this Company are well known; and the importance of its relations with the public may be estimated from the fact that since its establishment it has paid more than Eight Millions Sterling in discharge of Claims for Losses by Fire.
Insurances with this Company expiring at Michaelmas must be renewed within fifteen days thereafter, or they will become void.
Receipts are now ready at the principal Offices, Lombard-street and Charing-cross, and with the respective Agents throughout the United Kingdom.

ALBERT INSURANCE COMPANY LIMITED (FIRE and MARINE).—Premiums charged estimated by the individual risk; the utmost liberality maintained in every transaction. Agents wanted.—Offices, 8, Finch-lane, and 7, Waterloo-place, Pall-mall.
MORELL THEOBALD, Manager Fire Department.

TO BUILDERS AND OTHERS.

THE GENERAL FINANCE, MORT-GAGE, and DISCOUNT COMPANY (Limited).
Offices: 3, PENTONVILLE-ROAD, LONDON.

In consequence of numerous applications the Directors have agreed to accept deposits in sums as low as 5*l*. at a fixed rate of interest, and for periods not less than one year.—By order,
WALTER A. MICHAEL, Secretary.

MINTON, HOLLINS, & CO. Stoke-upon-Trent, beg to inform architects, the gentry, and others, that, consequence of the increasing demand for their Encaustic and Tesselated Pavements, and with the view of facilitating the execution of orders, they have opened an important Show-room, at their Establishment, No. 39, Conduit-street, London, where experienced draughtsmen will be constantly in attendance, to afford all information required.

DRAWINGS and ESTIMATES, on the receipt of plans, will also be promptly furnished, on application at the Manufactory, Stoke-upon-Trent.

MINTON & CO. take the present opportunity of stating that they are always in stock a large and varied assortment of tiles, suitable for flower boxes, stoves, and other ornamental purposes.

TERRA COTTA and Fine STONEWARE
POTTERY, warranted to stand Frost.
JOHN M. BLASHFIELD, STANFORD POTTERY, STAMFORD, LINCOLNSHIRE, has greatly improved and economised the manufacture of TERRA COTTA and Fine STONEWARE for ARCHITECTURAL PURPOSES. He is able to make it of various new colours, so as to harmonise with Marble, Portland, and other Stones, and rival hardness to Granite.
A Medal at the International Exhibition was awarded, in Class 10, Section C, Architectural Objects, for "Perfection in manufacture and unity of form." A Medal was also awarded for "Terra Cotta."
Moulded Bricks, String Courses, Cornices, Coils, Tracery, Balusters, Capitals, Crosses, Terminals, Vases, Statues, Brackets, Consoles, Gargoyles, Edging, Guttering, six, nine, and twelve inch Paving Tiles, &c. &c.
Also Plain and Mosaic Pavements for Halls, Churches, Conservatories, &c. in all colours.
London Office, 377, Oxford-street, W.

DEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21 Wharf, Caledonia-field-street North, City-road Basin, N. Finally, that the trade may, "TERRO METALLIC," is the exclusive right of the Proprietor; and briefly, that the "Reports of the Juries," page 281, of the Great Exhibition, 1851, note the grant of a First-class Medal and rank the manufactures known so long as "The Tileries," Tunstall, Staffordshire, as "the first of the kind in the world."

TWO PRIZE MEDALS AT THE INTERNATIONAL EXHIBITION
MAGNUS'S ENAMELLED SLATE obtained the Medal of the Society of Arts; the Prize Medal at the Great Exhibition, 1851; Two First-class Medals, 1855 Paris Exhibition; and Two Prize Medals at the International Exhibition of 1862.
Worthless imitations of this beautiful material are being palmed upon the public. Architects are therefore requested to see that the name "MAGNUS" is upon each article.
Chimney-pieces, Billiard-tables, Table-tops, Baths, Wall-linings, &c. A New Illustrated Catalogue of which can be had at the Pimlico Works, 20 and 40, Upper Belgrave-place, Pimlico, S.W.

PRIZE MEDAL TO MAW & CO. INTERNATIONAL EXHIBITION, 1862.
IMPERISHABLE TESSELATED PAVEMENTS, combining a highly decorative and economical substitute for ordinary floors of their perishable covering. MAW & SON'S Pattern book, designed by M. Digby Wyatt, esq. together with a special design and estimate of cost adapted to any given dimensions of hall, passage, conservatory, vermilion, frieze, &c. will be sent on application to Benthall Works, Broseley, Salop.
May be seen at the Exhibition of Building Inventions, &c. now open at the Galleries of the Architectural Exhibition, 9, Conduit-street, free.
London Agents—W. B. SIMPSON & SONS, 456, West Strand, who have on view a great variety of Specimens of the Pavements.

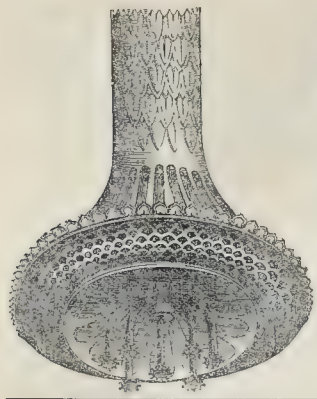
BEST RED BRICKS.
White, Black, and Red Cutters. Also a large assortment of FANCY MOULDED BRICKS & GARDEN EDGINGS, Plain and Ornamental ROOFING and RIDGE TILES, Delivered by Vessels in the Dock alongside the Kilns, in the River Medina.
Pattern Sheets, and all information, may be had of R. LANGLEY, Agent, East Cowes-park, Isle of Wight.

TO BRICKMAKERS.—All Parties who BURN BRICKS in CLAMPS are invited to inspect the NEW MODE of SETTING, patented by Mr ROBERT WHITE, and which may be seen in operation at the Brickfields of
J. B. WHITE & BROTHERS, Erith, Kent.
The advantages of this plan are two-fold.
1st. Nearly all the bricks are burnt into stocks, and the yield of inferior bricks is reduced from 35 to about 10 per cent of the total make, which in itself represents a large permanent saving.
2nd. The bricks are so much improved in colour and soundness as to give them a considerable additional value in the market over common stocks.
Licenses for use of the Patent granted to Brickmakers, on application to the Patentees 17, Millbank-street, Westminster.



WROUGHT-IRON TANKS, CISTERNS, GIRDERS, FUNNELS, &c. plain or galvanised; CATTLE TROUGHS, IRON CART BODIES, &c.

FOR WATER, OIL, AND TURPENTINE.
CATTLE TROUGHS, GIRDERS, CART BODIES, &c.

Omnibuses from Limehouse Station, Blackwall Railway.

THE FURNISHING OF BED-ROOMS.
HEAL & SON have observed for some time that it would be advantageous to their Customers to see a much larger selection of Bed-room Furniture than is usually displayed, and that to judge properly of the style and effect of the different descriptions of Furniture, it is necessary that each description should be placed in separate rooms. They have therefore erected large and additional Show rooms, by which they are enabled not only to extend their Show of Iron, Brass, and Wood Bedsteads, and Bed-room Furniture, beyond what they believe has ever been attempted, but also to provide several small rooms for the purpose of keeping complete suites of Bed-room Furniture in the different styles.
Japanned Deal Goods may be seen in complete suites of five or six different colours, some of them light and ornamental, and others of a plainer description. Suites of Stained Deal Gothic Furniture, Polished Deal, Oak, and Walnut, are also set apart in separate rooms, so that customers are able to see the effect as it would appear in their own rooms. A suite of very superior Gothic Oak Furniture will generally be kept in stock, and from time to time new and select Furniture in various woods will be added.
Bed Furnitures are fitted to the Bedsteads in large numbers, so that a complete assortment may be seen, and the effect of any particular pattern ascertained as it would appear on the Bedstead.
A very large Stock of Bedding (HEAL & SON'S original trade) is placed on the BEDSTEADS.
The Stock of Mahogany Goods for the better Bed-rooms, and Japanned Goods for plain and Servants' use, is very greatly increased. The entire Stock is arranged in eight rooms, six galleries (each 120 feet long), and two large ground-floors, the whole forming as complete an assortment of Bed-room Furniture as they think can possibly be desired.
Every attention is paid to the manufacture of the Cabinet work, and they have just erected large Workshops on the premises for this purpose, that the manufacture may be under their own immediate care.
Their Bedding trade receives their constant and personal attention, every article being made on the premises.
They particularly call attention to their Patent Spring Mattress, the Somnier Elastique Portatif. It is portable, durable, and elastic, and lower in price than the old Spring Mattress.
HEAL & SON'S ILLUSTRATED CATALOGUE of Bedsteads, Bedding and Bed-room Furniture sent free by Post.—196, 197, 198, Tottenham-court-road, London.

PRIZE MEDAL, 1862.

MANUFACTORY and CITY SHOW ROOMS, 147, HOUNDSDITCH.

HUBBUCK'S PATENT WHITE ZINC PAINT.
By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.
ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent. Whether sold under the name of "Improved Zinc Paint," or as the number Two or Three qualities, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.
CHEAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of the Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.
EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."
THOMAS HUBBUCK & SON,
WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

CONTRACTORS FOR ROOFING THE GREAT EXHIBITION BUILDING OF 1862.
By Her Majesty's Royal Letters Patent.
F. McNEILL & CO. of LAMB'S BUILDINGS, BUNHILL ROW, LONDON,
Manufacturers and ONLY Patentees of
THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.
Patronized by
HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSIONERS OF CUSTOMS,
HONOURABLE EAST INDIA COMPANY,
HER MAJESTY'S WAR DEPARTMENT,
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK.
And by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland, at which great national shows it has been exhibited, and OBTAINED THE PRIZE for being the best and cheapest article for roofing; also used for under-slates at the Royal Agricultural Society's House in Hanover square. Its advantages are lightness, warmth, durability, and economy. It is impervious to rain, snow, and frost, and a non-conductor of heat and sound. The Felt can be cut to any length, by 32 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its uses, and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen, and Gentlemen, who have extensively used it, sent free to any part of the town or country. DRY HAIR FELT, for covering Boilers, &c., is also manufactured, by which a saving of about 25 per cent. in fuel is effected. The TRADE are respectfully invited to send their orders DIRECT to the FACTORY, as the surest means of being supplied with a good article, and in lengths best suited to their roofs. The original works where the above roofing is made are F. McNEILL & CO'S Manufactories, LAMB'S BUILDINGS, BUNHILL ROW. Roofs covered with McNEILL'S FELT to be seen at the CAMPS of ALDERSHOTT, CURRAGH, SHORNCLIFFE, and COLCHESTER, upwards of Three Millions of Feet; also the GREAT EXHIBITION BUILDING of 1862, of nearly One Million Feet. A Liberal Discount allowed to the Trade.

ROSTREVOR SYENITE MACADAM, the hardest and most durable ROAD MATERIAL ever used, can be supplied direct from the Quarries to parties requiring a first-rate Road Material, or from ships in the Thames below London Bridge. Every information can be had on application to the Proprietor, Mr JAMES SAVAGE, Basin House, Newry. Agents, Messrs. G. W. WALKER & CO 77, Lower Thames street, London, E.C.

SET MAKERS.—WANTED, at the Rostrevor Syenite Quarries, County Down, Ireland, 100 steady WORKMEN, who will get constant employment, at good wages, on application to Mr JOHN DAVIS, Foreman, Rostrevor, Ireland.

THE SCOTTISH GRANITE COMPANY (Limited) are prepared to EXECUTE ORDERS in Polished, Red, or Grey GRANITE, for Monumental or Architectural purposes. The Red Granite from their quarries is more durable than any other in any other known, and can be obtained in large masses. The Company are also ready to undertake Contracts for the supply of any quantity of their materials, either in blocks or hewn, sawed, and in lengths varying from 1 to 20 feet, or upwards if required.—Specimens of the stone may be seen at the Offices of the Company, 36 Cannon-street, London, E.C. and terms may be ascertained by application to the Secretary.

SHOWROOMS:—
No. 166, BROMPTON ROAD, LONDON, S.W.; where Architects, Builders, and Merchants will find the largest and best Stock of CHIMNEYPIECES and MONUMENTS in London; of which Books, Catalogues, and Sheets of Monuments will be forwarded on application.
Estimates will meet with prompt attention.
MANUFACTORY at WALTON STREET.

LITTLE CASTERTON FREESTONE
Apply, for prices, &c. to
OCTAVIUS N. SIMPSON, STAMFORD,
The Owner; and see Specimen at the Museum of Practical Geology, Jermyn-street, W.
This stone (which is a perfect oolite) is raised in blocks of any portable size, and is about 4 feet thick in the bed. It will stand ANY WEATHER, is much used for water works, and for the building and restoration of churches. When used as ashlar work it is not necessary to place it bed wise. It works freely with a toothsaw, and is wrought at a cheaper rate than any stone in the kingdom.
*** The above WEATHER STONE is used largely by London Builders.

BELLMAN & IVEY,
GENERAL AND ORNAMENTAL PLASTERERS,
Manufacturers of
SCAGLIOLA MARBLE
and
SUPERIOR PLASTER OF PARIS.
This Plaster, made expressly for their own business, is of excellent quality, and its extreme lightness in weight ensures a saving of 30 per cent. in use, from its covering one-third more superficies than the general plaster.

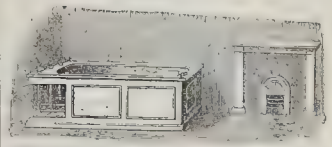
A Cottage Closet, with Patten's Patent High-pressure Valve, complete, 12s. 6d.

READE & HEWITT'S PATENT PNEUMATIC PAN and SELF-ACTING WATER CLOSETS, RAILWAY URINAL, and SEWER FLUSHING APPARATUS.
The simplest, strongest, and cheapest Closets manufactured, acting efficiently with or without Supply Cistern, and at high or low pressure. Specially adapted for railway stations, offices, public buildings, work-shops, and any situations where subjected to severe usage. Prevents waste of water, saves piping, cranks, wires, service-box, and all the complicated apparatus of self acting closets.
The Self-acting Pneumatic Flushing Vessel flushes ranges of urinals regularly at intervals, the time between the discharge being regulated by a simple tap, thus saving an immense quantity of water, which ordinarily runs to waste.

Best Pan Closet, complete	£2 12 6
Best Self-acting Closet, complete	2 15 0
Railway Urinal Flushing Vessel, complete	3 3 0



LIVERPOOL, No. 5, WELLINGTON BUILDINGS, SOUTH CASTLE STREET.

PURLEY, near Croydon, contiguous to the Caterham Junction Station, on the main line of the Brighton and South Eastern Railways, about 1¼ mile from the South Croydon Terminus, and 12 miles from London, which is reached in half an hour by rail.

MESSRS. BLAKE will SELL by AUCTION, at the GREYHOUND INN, Croydon, on THURSDAY, OCTOBER 13, at FOUR for FIVE o'clock, Twenty Valuable FREEHOLD BUILDING PLOTS, and Two Cottages, with Gardens, being a portion of the Purley Lodge Estate, the whole having capital frontages to the turnpike road, and to a new road through the estate. The land has a substratum of gravel and chalk, and is in a delightful rural and healthy situation. The proximity of the railway station, and ready means of communication with the metropolis, render the land of a safe and sterling character for the carrying out of extensive building operations.—Particulars, with plans, may be had at the Greyhound Inn, Croydon; at Garraway's Coffee-house, Change-alley; of Messrs. WEST & KING, Solicitors, 3, Charlotte-row, Mansion House; and of Messrs. BLAKE, Croydon.

By Order of the Liquidators.—Patent Alkali, Blue Vitriol, and Metal Works, St. Helen's, Lancashire.—Large Sale of Building Materials, &c.

MR. KIRK respectfully announces that he is instructed to Catalogue and SELL by AUCTION, on WEDNESDAY, THURSDAY, and FRIDAY, the 28th 29th, and 30th days of SEPTEMBER, the whole of the BUILDINGS, of every description (in order that the whole may be taken down, removed, and the ground cleared), forming the extensive Works known as the Patent ALKALI and METAL WORKS, at St. Helen's, Lancashire, including extensive ranges of substantial brick buildings, blue slated roofing of the very best Welsh blue slates, rafters, joists, beams, planking, &c. Immediately available and excellent in quality; cast and wrought iron work in columns, girders, tie-rods, &c.; lead flashings, gutterings, shoots, &c.; flags, tiling, &c. Also a 30-horse condensing steam engine, large cast iron water-tank, together with a vast assemblage of other valuable materials and effects.—Full particulars in catalogues, which are now ready, and may be had of the Auctioneer, at his Offices, No. 8, Essex-street, King-street, Manchester.

Contractors' Plant, Machinery, Four Portable Steam-Engines, and Effects.

MR. GAIRDNER is instructed by Messrs. Brassey, Ogilvie, & Harrison, having nearly completed the whole of the Northern Mid Lever Sewer, to SELL by AUCTION, on the PREMISES, on Bishopsgate-street (adjoining the Great Eastern Railway), on MONDAY, the 26th SEPTEMBER, at TWELVE, FOUR portable 10 nominal power STEAM ENGINES, tunnel pumps, mortar mill, Woodford's patent riveted shoring, ten portable offices, engineer's observatories, and store-houses, fourteen brick and rubbish carts, timber in balk and plank, ladders, stacks of fire-wood, scrap and old iron, 4 cwt. of bolts and fastenings, and numerous miscellaneous effects.—On view two days prior. Catalogues forwarded per post, and at Mr. GAIRDNER'S Offices, 189, Tottenham-court-road, W.

To CONTRACTORS, COAL MERCHANTS, BREWERS, and Others.

MESSRS. WILLIS & HARROW are favoured with instructions from the Contractor for the Charing Cross and City Extension Lines, to SELL by AUCTION, at the STABLES, PARK STREET, BOROUGH, on WEDNESDAY, SEPTEMBER 28th, at TWO for TWO o'clock, Twenty-five superior and powerful DRAUGHT HORSES, at present working on the above line, but on account of the work being now completed, are no longer required.—May be viewed the morning of sale, and catalogues obtained at the Offices of the Contractor, Worcester street, Southwark; and of Messrs. WILLIS & HARROW, 3, Newman's-court, Cornhill, E.C. and West Molesey, Kingston, Surrey.

EARLY SALE at ELEVEN for TWELVE o'clock, on account of the number of Lots.—To Timber Merchants, Builders, Cabinet Makers, &c.

MESSRS. LEREW will SELL by AUCTION, on the PREMISES, Camden-terrace, Camden-Town, on MONDAY, SEPTEMBER 26, at ELEVEN o'clock, nearly 400 Lots of Capital STOCK comprising 1 well-built pair of dessert, 1,200 planks, deals, and battens; 150 squares flooring, all 7 feet mahogany, birch, lime tree, beech, elm, dry cut pine, quartering, doors, sheets, stuff, 10,000 feet moulding, 8 marble chimney-pieces, scaffolding, ladders, building materials, &c.—Auction Offices, 2, Carlington-street, Hampstead-road.

PIMLICO.—Capital Materials of Six Dwelling houses.

MR. GEO. HAINES will SELL by AUCTION, on the PREMISES, on TUESDAY, SEPTEMBER 27th, at TWELVE o'clock, all those the BUILDING MATERIALS of the old King's Head Wine Vaults, and Five other Houses in Rarlett-street and Arabella-row, comprising a very large quantity of prime brickwork, slate and tiled coverings, sound timbers in the roofs, the usual fittings of the numerous rooms, clean batten floors and joists, mahogany shop fronts with plate glass, lead and iron work, stone paving, fixtures, and useful fittings.—May be viewed. Catalogues of Messrs. HAINES & SON, Auctioneers, Mourgate-street, City; and at the Auctioneer's Offices, Grosvenor-street West, Eaton-square, and No. 12, High-street, Kensington.

Beautiful Park-like Freehold Land, at Farnborough, Hants, with a charming Site for a Mansion, in a ring fence, undulating, and ornamentally timbered, 35 acres in extent, in one lot.

MESSRS. EDWIN FOX & BOUSFIELD are favoured with instructions from the Directors of the Farnborough and Aldershot Freehold Land and Ground-rent Society (Limited), to SELL by AUCTION, at the QUEEN'S HOTEL, North Camp, Farnborough, on WEDNESDAY, OCTOBER 19th, at THREE precisely, a valuable and important FREEHOLD ESTATE, comprising a beautiful Close of Land, about fifty-five acres in extent, approached by capital roads, and within one mile of the Lynchford Station, on the South-Eastern Railway, and about the same distance from the Farnborough Station, on the South Western Railway. It is magnificently timbered, of an undulating character, and entirely surrounded by a belt of beautifully grown firs. There is a fine Site for a Mansion, whence views of great extent and beauty are obtained, and meadows slope gently to the Blackwater River; Nature has done much for the spot, judgment and taste are now only required in its development.—May be viewed, and particulars had of Messrs. PATTESON & COBBOLD, Solicitors, 17 and 18, New Bridge-street, Blackfriars; of Mr EDWARD CHATFIELD, Managing Director of the Society, 17, New Bridge street; of Mr. HENRY CURREY, Surveyor, 7, Lancaster-place, Strand; and of Messrs. EDWIN FOX & BOUSFIELD, 41, Coleman-street.

NORTH CAMP, FARNBOROUGH HANTS.—Valuable Freehold Building Land, with unusual facilities for payment of the purchase-money.

MESSRS. EDWIN FOX & BOUSFIELD are favoured with instructions from the Directors of the Farnborough and Aldershott Freehold Land and Ground-rent Society (Limited) to SELL by AUCTION, at the QUEEN'S HOTEL, North Camp, Farnborough, on WEDNESDAY, OCTOBER 19, at ELEVEN for TWELVE o'clock, in 130 Lots, the third portion of their very valuable and important FREEHOLD ESTATE most advantageously situate, at Farnborough, adjoining the North Camp, consisting of a variety of charming sites for villa residences, varying in extent from a quarter of an acre to an acre each, many of them studded with ornamental timber, and in close proximity to the site of the new church, together with numerous plots for cottages and some first-rate positions for shops, fronting the high road, and other capitally-made and well drained roadways, all of which will, from the judicious manner in which they are laid out, and their proximity to the great military camps and to the railway stations, become important leading thoroughfares. The demand for houses of every class is very great, and high rentals are readily obtained. Within the last ten years the civil population of Aldershot has increased tenfold. There is excellent water, and plenty of sand and gravel. No rates. The terms of payment will be remarkably easy, viz. a deposit of 5 per cent, and the remainder by instalments, extending over ten years, with interest at only 4 per cent and subject to the most moderate and fair restrictions as to the buildings to be erected thereon. The great success which has attended the two previous sales has induced the Directors to submit the third portion this season, and which will be the last sale during this year. The estate may be viewed, and particulars had of Messrs. PATTESON & COBBOLD, Solicitors, Nos. 17 and 18, New Bridge-street, Blackfriars; of EDWARD CHATFIELD, Esq. the Society's Managing Director, 17, New Bridge-street; of HENRY CURREY, Esq. Surveyor, Lancaster-place, Strand; at Garraway's Sale-rooms, Change-alley, Cornhill; at the Place of Sale; at the Inns at Farnborough, Aldershott, Guildford, and Reading; and of Messrs. EDWIN FOX & BOUSFIELD, 41, Coleman-street, Bank.

PLAISTOW, ESSEX.—Twelve superior Freehold Residences producing 320l per annum; and Thirty Plots of eligible Freehold Building Land, near the church and railway-station.

MR. JOHN M. DEAN will SELL by AUCTION, at GARRAWAY'S, Change-alley, Cornhill, on FRIDAY OCTOBER 7th, at TWELVE, in Forty-two lots, Twelve FREEHOLD RESIDENCES, of handsome elevation, let at inadequate rents to highly respectable tenants, producing 320l. per annum; and Thirty Lots of eligible FREEHOLD BUILDING LAND, the whole encircled from Lady-lane, pleasantly situate in Park road, Upper Plaistow, Parish of West Ham, close to the Parish Church, and within a short distance of the railway station. The land is high and dry, with a gravelly subsoil, and suitable for the erection of superior dwelling-houses.—Particulars, with plan, may be had at the Auctioneer's Offices, 11, Guildford, and Reading; and of Messrs. EDWIN FOX & BOUSFIELD, 41, Coleman-street, Bank.

FREEHOLD BUILDING LAND, ten miles by rail from London Bridge, in KENT, part of the Estate of the late Western Wood, esq.

MR. ABBOTT is instructed to SELL by AUCTION, at the GUILDHALL COFFEE-HOUSE, in the City of London, on WEDNESDAY, the 28th of SEPTEMBER, 1864, at ONE for TWELVE precisely, in TWELVE LOTS, in one Plot, of FREEHOLD LAND, and another Plot leasily adjoining, containing One Acre and Fifteen Perches, both with extensive building frontages to the old Kent road, the property of the Society of Ironmongers, and to the Ford Railway, now nearly completed, and close to the land upon which it is proposed to build a first-class station, situate on the north side of the Landmere-lane, in the parish of Lee, in the parish of Foots Cray, affording really eligible sites for building, with cheap and easy access to the Metropolis.—Printed particulars, with plans and conditions of sale, may be had of Messrs. HAWKS, WILLMOTT, & STOKES, Solicitors, 82, High-street, Borough of Southwark; of Mr. KEELER, of Sidcup, who will show the land; and of Mr ABBOTT, 26, Bedford-row, Gray's-inn, London, and Eynesbury, St. Neots, Huntingdonshire.

23,000 Pieces of Paperhangings, 150 Sicilian Marbls and Stone Chimney-pieces, 3½ tons White Lead, Dryers, Glass, Paints, and Effects.

MR. KEMP begs to announce that he will REMOVE from Moorfields for the City improvements, and SELL by AUCTION, at his ROOMS, 67, Colemau-street, City, on MONDAY next, at TWELVE precisely, without reserve, the above STOCK. View and catalogue at the Rooms.

THE TILERIES, SPRIN FIELDS, NEWCASTLE UNDER-LYME, in the county of Stafford.—To CONTRACTORS, BUILDERS, and OTHERS.—Extensive SALE of STOCK IN TRADE

MESSRS. C. & H. GILLARD have been instructed to SELL by AUCTION, upon the PREMISES, Springfields, Newcastle, Staffordshire, on TUESDAY and WEDNESDAY, SEPTEMBER 27th and 28th 1864 a large quantity of BRICKS, TILES, PIPES, QUARRIES, and other new materials, being the stock of the late Mr William Jones, which will be sold in convenient lots, and by arrangement can be placed upon rails or boats, as the canal closely adjoins the works. The sale will commence each day at ELEVEN o'clock.—Catalogues may be obtained from the Auctioneers, Stafford; and from Mr. JONES, at the Tileries.

12,000 Pieces of French and English PAPER HANGINGS 200 Marble and Enamell'd Slate Chimney pieces, 1,500 feet Gilt Room mouldings, Stoves, Water closets, and Effects.

MR. EDWIN WHITE will SELL by AUCTION, without reserve, at his ROOMS, 13, Holborn bars, and 1, Castle street, Holborn hill, on TUESDAY next, at ONE, the above Items for House Furnishing.—View and catalogues Monday and Morning of Sale.

REPOSITORY, BARBICAN.—Railway Cart Horses.

MR. J. GOWER will SELL by AUCTION, on FRIDAY, the 30th SEPTEMBER, TWELVE young, active CART or VAN HORSES, the property of Mr. Thomas Lansbury (now employed on the Crystal Palace and South London line, now completed. On view two days prior.

TWICKENHAM PARK, near RICHMOND.—Most Eligible BUILDING LAND TO BE LET on Lease, for Nine, Twelve, or Fourteen Years, in Large or Small Plots. Money advanced, if required. For particulars, apply to W. BACKHOUSE, at the Estate Offices, Twickenham Park; or EDWARD GUILLAUME, Esq. 14, George street, Mansion House, London.

SURBITON.—TO BUILDERS and OTHERS.—LAND TO BE LET, on building leases, five minutes' walk from the station, and close to the river, for houses of not less than 80l a year rent. A portion of the money will be advanced if required.—Apply to Mr. MUDLE, Victoria-road, Surbiton.

A FREEHOLD MANSION TO BE SOLD. The elegant Furniture may be had at a valuation. There are four reception-rooms, two being 50 feet in length, eleven bed-rooms; stabling for eight horses and coach-houses for four carriages; suitable servants' offices; extensive ornamental grounds, with greenhouses, in all 28 acres, gravelly soil; near Sunningdale Station, South Western Railway, half a mile from Windsor Great Park, and fifty minutes from the Waterloo Station.—Apply to J. BOWEN MAY, Esq. Solicitor, 67, Russell-square.

FREEHOLD LAND TO BE LET, on Building Leases, at low ground-rents, on the estate of the Carpenters' Company, at Stratford, Essex, close to the Station and the High-street; one portion with river frontage, for the erection of manufactories, and another for small houses or cottages.—For plans and particulars, apply at the Clerk's Office, Carpenters' Hall, London-wall.

BUILDING LAND TO BE LET, situate at Vauxhall, Leytonstone, and Camberwell.—For particulars apply to Messrs. DRIVER & CO. 4, Whitehall, London, S.W.

RAMSGATE.—To BUILDERS, CAPITALISTS, and OTHERS.—TO BE SOLD or LET, several valuable Plots of FREEHOLD LAND, situate on the East Cliff, and adjoining the site of the proposed new Hotel.—Apply to WALLER & SON, 4, Lyall-street, Belgrave-square, London; or of Messrs. FRIEND & VINTEN, House agents, Ramsgate.

WHARF PREMISES TO BE LET, on the Regent's Canal (N.W.), close to the London and North Western Goods Depôt, well situated for a Slate Depôt, &c. A long lease would be granted to a suitable tenant.—Address, D. F. Office of "The Builder."

TO BRICK and TILE MAKERS and OTHERS.—TO BE LET, for a term, BRICK KILN, FOREMAN'S COTTAGE, and LAND, containing brick earth, at Sunningbill, Berks. There is a great demand for bricks, in consequence of the formation of the Railway from Sunningdale to Cambridge Town, and a so to carry on building operations in the neighbourhood; therefore the Owners of a large Estate at Sunningdill are prepared to Let a portion of Land, with Kiln, and Foreman's Cottage, for Brick and Tile making. The use of a private siding on the Staines and Wokingham Railway, very near the ground, and other advantages, will be accorded to any one taking the Land.—For particulars, apply to Messrs. DRIVER & CO. Surveyors, Land-agents, and Auctioneers, 4, Whitehall, London, S.W.

TO BUILDERS.—PLOTS of LAND adjoining the most beautiful part of the River Thames and within 600 yards of the Taplow Station, thirty-five minutes from London. TO BE LET on Building Leases, at low ground rent Villas of 1001. a year are in great demand. Advances of 70 per cent. to respectable builders.—Apply to R. A. WARD, Solicitor, Maidenhead.

VALUABLE and extensive WATERSIDE PREMISES, close to Queen-street and Southwark Bridge, in the City of London. To WHARFINGERS BONDED WAREHOUSEMEN, and OTHERS.—TO BE LET, the extensive BLOCK of newly built WAREHOUSES, known as Queenhithe Dock, having frontage to the river Thames, of 140 feet of a depth exclusive of the dock, where vessels of 150 tons can lay by. Further particulars of Messrs. DEBENHAM & TEWSON, 80, Cheapside.

STRATFORD, ESSEX.—TO BE LET, by Tender, on a repairing lease, for a term of years, all those ELEVEN DWELLING-HOUSES and PREMISES, situate in the Broadway, Stratford, and known as Essex buildings. Also a DWELLING-HOUSE, with double shop front, situate in the High-street, Stratford, near Channel sea court.—Apply to Mr. W. H. DEAN, Auctioneer and Surveyor, 43, Fenchurch-street, London, E.C.

YARD and PREMISES at BRIDGWATER.—The Directors of the Bristol and Exeter Railway Company are prepared TO LET, for a term of years or otherwise, from Michaelmas next, the YARD and PREMISES known as SOMERSET-YARD, adjoining the Railway and near the Station at Bridgwater, Somersetshire, at present in the occupation of Mr Cuthbert Adams, Contractor and Merchant. The premises comprise about 3½ acres, have a water-frontage of about 520 feet to the river Parrett, and are connected with the railway by a line of rails running into the yard.—Tenders to be addressed to the Secretary of the Bristol and Exeter Railway Company, at Bristol, from whom any necessary information may be obtained.

ARTHUR MOORE, Secretary.

TO BE LET, the GALLERY of the SOCIETY of BRITISH ARTISTS, consisting of five large rooms, until the end of FEBRUARY.—Inquire on the Premises.—T. ROBERTS, Secretary.

BUILDING GROUND, GREEN LANES, STOKE NEWINGTON, N.—Several FRONTAGES TO BE LET, for the ERECTION of Semi-detached VILLAS, in this improving locality. Width 60 feet for a pair. 150 feet deep. The sewer is made.—For particulars, apply at the Office, Green Lanes, Stoke Newington, N. or 24, Clifton Villas, Paddington, W.

TO TIMBER MERCANTS, BUILDERS, and SAW MILL PROPRIETORS.—TO BE LET, the old-established SAW MILL and TIMBER YARD, Pump-court, Union-street, Borough, which have been pulled down, re-modelled, and fitted with new machinery.—For terms and particulars apply to D. EADES, on the Premises.

BLACKHEATH.—First-class BUILDING LAND TO BE LET. Within a few minutes of the Station.—Apply to FRANCIS FULLER, 8, Adelphi-terrace, Strand.

POULTRY, CHEAPSIDE.—TO BE LET, on a Building Lease, with possession at Midsummer, 1865, the extensive FREEHOLD PREMISES, No. 28, Poultry, newly pulled down and proposed new street, in the occupation of Mr. Ford and also two HOUSES in Bow-court; and at Midsummer, 1867, the PREMISES No. 4, Old Jewry, the whole being connected and forming an extensive plot of ground adapted for the erection of Offices, or for a Public Company. Plans may be inspected and particulars obtained of Messrs. ELLIS & SON, Auctioneers and Estate Agents, 49, Fenchurch-street.

EXTENSIVE MANUFACTURING PREMISES TO BE LET, about three miles from London Bridge, with every facility for land and water carriage. They enclose a square about 300 feet by 150 feet, and comprise a 3-story Warehouse, with Workshops, Chimney shaft standing, or with or without two or four Acres of Land.—For particulars, apply to Messrs. DEBENHAM & TEWSON, 80, Cheapside.

FAIRER'S TURRET CLOCKS, 188, St George-street East, London. By Special Appointment to the Queen and to her Royal Highness the Prince Consort, her Majesty's War Department, &c. Maker of the Great Clock of the Tower of London. Tea Village Clock, price 40 guineas.

London:—Printed by CHARLES WYMAN, Printer, at the Printing-office of Cox & Wyman, Nos. 74 and 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-fields; and published by the said CHARLES WYMAN, at the Office of "THE BUILDER," No. 1, York-street, in the Parish of St. Paul, Covent-garden, both in the County of Middlesex.—Saturday, September 24, 1864.

BY ORDER of the SECRETARY of STATE for INDIA.

DESIGN FOR COMPETITION—PRESIDENCY COLLEGE AND SENATE HOUSE.

The Madras Government are prepared to receive DESIGNS for a new PRESIDENCY COLLEGE, and for a SENATE HOUSE, to be built at Chepauk, Madras.

A schedule of measurements, together with a plan of the proposed site, can be had on application to the UNDER SECRETARY of STATE for INDIA, India Office, Westminster.

The rates on which the work is to be calculated will also be furnished at that Office. The gross estimate is not to exceed Rupees 2,50,000 for the College, and Rupees 1,50,000 for the Senate House.

The buildings will be erected on contiguous sites, and both should therefore be planned in the same style of architecture.

There must be ample provision for proper ventilation, and the walls must be protected, as far as possible, from the direct rays of the sun.

The designs are unrestricted, firstly, as to the style, provided it is suited to the climate, and to the use to which the buildings are to be devoted; and secondly, as to materials, provided they are procurable in Madras, at prices which will admit of their being used in the buildings as designed.

The designs must include,—

1st.—Ground-plan, and plan of each story.

2nd.—Elevation of each of the four faces, if not alike.

3rd.—Transverse sections.

The plans and elevations to be on a scale of 8 feet to an inch. A specification, in sufficient detail, to accompany each plan, to enable the Judges to decide whether the plans can be carried out within the sum allowed.

A prize of Rupees 3,000 will be awarded for the best design, provided it fairly fulfils the above conditions.

If the best designs, in an artistic point of view, fail to fulfil any of the above essential conditions, the Judges will be empowered to reduce or withhold the prize; and no prize will be awarded to a design merely because it fulfils the conditions, if otherwise conspicuously deficient in artistic merit.

The designs and estimates, &c. should be sent in on or before the 1st of JANUARY, 1865, in the name, manner with motto and envelope, containing the name and address of the artist, to the Secretary to Government, Public Works Department, Madras, in whom the envelopes will be deposited after the prizes have been adjudged.

It will be optional to Government to avail themselves of the services of the architect in carrying the design selected, and that design will remain the absolute property of Government.

The plans will be selected and the prize awarded by a Committee consisting of,

The Secretary to Government, Public Works Department.

The Director of Public Instruction.

The Chief Engineer, Madras Railway Company,

who will be asked to aid Government in the adjudication.

Unsuccessful designs will be returned to the authors if claimed by them, or by their authorized agents, within one month from the period of adjudication.

April 21, 1864. (Signed) CHARLES A. ORR, Colonel, R.E. Secretary to Government.

India Office, September 21, 1864.

THE NATIONAL ART TRAINING SCHOOLS at SOUTH KENSINGTON, for Male and Female Students, will BE OPEN on MONDAY, the 3rd day of OCTOBER. For information respecting fees, &c. apply to the Schools, or to the Secretary, Science and Art Department, South Kensington, W.

By order of the Lords of the Committee of Council on Education.

NOTICE.

BROWN & GREEN'S KITCHEN RANGE WAREHOUSE is now REMOVED to the NEW PREMISES, 72—74, Bishopsgate-street Within, a few doors from the late Address, at No. 81. These afford accommodation for a still larger stock of their Patent Prize Medal Ranges and Stoves, Cooking Utensils, &c. to meet the great public demand; and also for the consequent more extensive execution of all descriptions of hot water, bath, laundry, and steam work.

72 74, Bishopsgate street Within.

COMPETITIONS.

TO ARCHITECTS.—The Town Council of the City and Borough of Bath invite DESIGNS for the proposed NEW BUILDINGS, upon the site of the late White Hart Hotel, Bath, which are intended to comprise suites of rooms for families, together with hot and cold baths, mineral water, and Turkish baths in connexion with the present bathing establishment. The cost of the buildings not to exceed 25,000l. A premium of 500l. will be paid to the author of the design, to which the Town Council shall award the first place, and a premium of 100l. to the author of the design which they shall consider second in merit, and in the event of either of these designs being carried out, the premium of the architect or author of it to be employed, will be deducted from the usual commission. The designs are to be delivered free of cost, at the Guildhall, Bath, properly endorsed, on or before NOVEMBER 29th, and the two designs to which premiums shall be awarded will become the absolute property of the Town Council, without any condition whatever. All designs to have the name of the author or authors attached, and to be coloured in monotone; the plans and elevations to be drawn to a scale of 1 8th of an inch to a foot. A copy of the conditions to be observed by architects, with a plan of the site, and other particulars, may be obtained of the undersigned, on the payment of 1l. 1s. which will be returned to those not forwarding designs

By order, JOHN STONE, Town Clerk.

Guildhall, Bath, September 8, 1864.

DESIGNS for FULFORD CHURCH.—FURTHER EXTENSION of TIME.—A PREMIUM of Fifteen Guineas is offered for the best SET of DESIGNS for the New Church at Fulford. Selections to be made by the Committee, and the Design selected to become the property of the Parish. Extreme estimate not to exceed 3,000l. Site, 60 yards square; Frontage, West—the York-road. Tower or Spire. Outside Wall, Hammered Stone. The Designs must be sent in to the Incumbent, care of the Postmaster, Fulford, on or before THURSDAY, the 20th OCTOBER.

TO ENGINEERS and OTHERS.—The Corporation of Okehampton contemplate BRINGING WATER into the town for the use of the inhabitants of the borough, and are desirous of receiving Plans, Specifications, and Estimates for the WORKS proposed, particulars of which may be obtained at my office. The Corporation will pay to the person whose plan shall be approved and adopted the sum of 20l.; but in case such person shall afterwards become the Contractor for effecting the work, that sum will be deducted from the amount of such Contract. The plans, &c. to be delivered to me within a month from this date.

JOHN MARSH BURD, Town Clerk.

Okehampton, Sept 19th, 1864.

CITY of COVENTRY.—MARKET HOUSE.—To ARCHITECTS. The Corporation of Coventry invite DESIGNS, PLANS, SECTIONS, ELEVATIONS, SPECIFICATIONS, and ESTIMATES for the ERECTION of a MARKET HOUSE. The Plans to be of a uniform scale of 8 feet to an inch. The cost of the entire Building, with Fittings, not to exceed 8,000l. The architect who, in the opinion of the Council of the said City, produces the best Designs, &c. to receive 50l.; the second best, 40l.; and the third best, 20l. The Designs, &c. for which premiums are awarded to become the property of the Corporation, and the architect of the Designs taking the first premium to supply the Corporation with Working Drawings, if required, for the same, for the remuneration as with the premium will amount to 5 per cent. on the outlay. The Corporation will not bind themselves to employ the architect in carrying out his designs, or to employ them at all, and if the plans sent in should fail, in the opinion of the Council, to be sufficient merit, the premium will not be awarded, nor will they be awarded unless the Council should be satisfied that the same can be executed within the estimate. Each set of designs, &c. must be distinguished by a motto, accompanied with a sealed envelope, containing the name and address of the competitor, and bearing a similar motto to that on the designs, &c. which envelopes will not be opened until after the plans are decided upon. The designs, &c. must be received in a sealed cover, endorsed "Plan for Coventry Market-house," and addressed to THOMAS BROWETT, Town Clerk, Coventry, and delivered on or before the 23rd day of NOVEMBER next. A block plan of the site, with approaches, levels, statement of conveniences required, and of the conditions to be observed by competitors, can be had on application personally or by letter, to J. E. GREATOREX, City Surveyor, St. Mary's Hall, Coventry.

THOMAS BROWETT, Town Clerk.

Coventry, September 23, 1864

DESIGNS for the O'CONNELL NATIONAL MONUMENT, in SACKVILLE STREET, DUBLIN.—The Committee for the Erection of the O'Connell National Monument, in Sackville-street, Dublin, are prepared to receive DESIGNS from Architects, Artists, &c. for a TESTIMONIAL or MONUMENT to O'CONNELL. Intending Competitors will receive, on application to the Honorary Secretaries of the Committee, at the City Hall, Dublin, a printed statement of the views of the Committee, the condition of the competition, and a ground-plan of the locality. Prizes of 100l. and 50l. are at the disposal of the Committee, to be awarded for designs, subject to the conditions above referred to. All designs must be received at the Committee-room, free of expense, on or before the 1st of JANUARY, 1865.

CONTRACTS.

WAR DEPARTMENT CONTRACT.—NOTICE to BUILDERS.

TENDERS are required for the following SERVICE at Chatham, viz.—

Erecting Latrines and Urinals, and diverting part of Sewer, &c. at Gravelson Barracks.

Parties desiring to Tender for the execution of these Works must leave their names at this Office, on or before SATURDAY, the 8th day of OCTOBER, 1864, and pay the sum of half a guinea for the bills of quantities, which will be sent to each party as soon as prepared by the Government Surveyor.

The Secretary of State does not bind himself to accept the lowest or any Tender.

Royal Engineer Office, Chatham, 26th September, 1864.

WAR DEPARTMENT CONTRACTS.—NOTICE to BUILDERS.

TENDERS are required for the SUPPLY of MATERIALS and LABOUR for War Department WORKS at Aldershott Camp and Permanent Barracks, in the county of Hants, including Repairs to the existing buildings, under a Triennial Contract, from the 1st January, 1865, to the 31st March, 1868, determinable at any period after one year, on either party giving to the other three months' notice in writing.

Copies of the schedules, for which the sum of six shillings and nine pence for each copy must be paid on issue, together with forms of Tender, may be obtained on application at this Office

Although the said schedules include prices for work done, and for day labour, the Contractor will, as a general rule, be called upon only to supply materials.

The Tenders to be addressed, under cover, to the Director of Contracts, War Office, Pall Mall, London, S.W. endorsed, in the left hand corner, "Tenders for Works at Aldershott," on or before SATURDAY the 29th NOVEMBER, 1864.

The Secretary of State for War does not bind himself to accept the lowest or any of the Tenders.

Royal Engineer Office, Aldershott, 14th September, 1864

WEAR NAVIGATION and SUNDERLAND DOCKS.—To CONTRACTORS.—The River Wear Commissioners are prepared to receive TENDERS for the ERECTION of a NEW GRANARY at the South Docks, Sunderland. Plans, drawings and specification may be seen at the Office of Mr. THOMAS MARA, Esq. C.E. Engineer's Office, Harbour and Dock Works, Sunderland, on and after the 19th SEPTEMBER, 1864. Tenders, on printed forms, which may be obtained at the Engineer's Office, and Dock Office, will be received, to be delivered under cover, addressed to the "Chairman of the Executive Committee, River Wear Commissioners," at 19, Fawcett-street, Sunderland, not later than NOON on TUESDAY 27th of OCTOBER, 1864. The Commissioners do not bind themselves to accept the lowest or any Tender.—By order,

J. S. ROBINSON, Clerk to the Commissioners.

19, Fawcett-street, Sunderland, September 7th, 1864.

[For remainder of Contracts see next Page.

CONTRACT for LAYING GRANITE CURB and SETS, and YORK PAVEMENT.—The West Ham Local Board of Health are prepared to receive TENDERS from parties willing, from time to time, to REMOVE the above-mentioned materials from the Victoria Docks or Wharfs on the River Lea, and to LAY the same on the Roads, Paths, and Gutters, which may be examined at the Office of Mr. MARSHALL, the Surveyor to the Board, Rokeby House, Stratford, E. where also forms of Tender may be procured, and any further information may be obtained. The Tenders, endorsed "Laying Pavement, &c." are to be sent to me on or before MONDAY the 10th OCTOBER next. By order of the Board

CHARLES WILSON Clerk to the Board.

Rokeby House, Stratford, 17th September, 1864.

GRANITE CURB and SETS of YORK PAVEMENT.—The West Ham Local Board of Health are prepared to receive TENDERS from parties who may be willing to DELIVER any of the MATERIALS, either in the Victoria (London) Docks, or on the Wharfs on the River Lea as may be named. Forms of Tenders, with any part. ulars or information required, may be obtained by application to Mr MARSHALL, the Surveyor to the Board, at his Office in Rokeby House, Stratford, E. and the Tenders are to be sent addressed to me, and indorsed "Tender for Pavement, &c." on or before MONDAY, the 10th OCTOBER next. No. 9, Saint James's-place, Manchester, and 1, No. 16, Great George-street, Westminster, on and after MONDAY, the 26th OCTOBER 1864 next. Tenders not to be delivered to, and left with, JAMES EDWARD NORRIS, Esq. Town Clerk, Halifax, on or before MONDAY, the 21st OCTOBER 1864 endorsed with the name of the particular contract for which each Tender is sent. The Corporation do not bind themselves to accept the lowest or any Tender, and they may, if they see fit, let the whole work in one or more contract or contracts.

N.B.—No 3 Contract is withdrawn.

By order,
J. E. NORRIS, Town Clerk.

Town-Hall, September 23rd, 1864.

TO SEWER CONTRACTORS, BUILDERS, &c.—St. Marylebone, September 22nd, 1864.—Notice is hereby given, that the Vestry of the Parish of Saint Marylebone, in the county of Middlesex, will meet in the Board Room of the Court House of the said parish, on THURSDAY, the 13th OCTOBER, 1864, at ELEVEN o'clock in the forenoon, to receive TENDERS from persons willing to CONTRACT for the CONSTRUCTION of NEW PIPE and BRICK SEWERS, in Upper Gloucester-street, in the said parish of St. Marylebone. Further particulars may be known, and drawings, specifications, and forms of Tender seen on application to the Vestry Surveyor, Mr. ROBERT SCALE, at his daily attendance at the Court House, from Twelve till One o'clock. The Tenders to be delivered to the Vestry Clerk, at the Court House, at or before ELEVEN o'clock in the forenoon of THURSDAY, the said 13th day of OCTOBER, sealed and addressed, "Tenders for New Sewerage Works," and in Tender will be received after that hour. The Contractor to find satisfactory securities for the performance of the works, and to pay the expenses of the bond and contract The Vestry will expect the parties tendering, or some person on their behalf, to be in attendance at the time of opening the Tenders. The Vestry do not pledge themselves to accept the lowest or any Tender. By order

W. E. GREENWELL, Vestry Clerk.

TO CONTRACTORS, BUILDERS, &c.—Notice is hereby given, that the Highways, Sewers, and Public Works Committee of the Vestry of St. Pancras will meet at the Offices of the Department of Works on MONDAY, OCTOBER 3, 18 4, at SIX o'clock p.m. to receive and consider TENDERS from persons willing to CONTRACT for the EXECUTION of GENERAL WORKS to Sewers, Gullies, and Buildings in charge of the said Vestry, agreeably with the terms of specification. Schedule and Plan to be obtained on the deposit of £1 at the Office of Mr. WILLIAM ROOTE SCOTT, C.E. Chief Surveyor, as under Good security will be required for the due performance of each Contract. The Vestry do not bind themselves to accept the lowest or any Tender No Tender will be received or considered unless made out on the printed forms Tenders must be delivered by SIX o'clock p.m. on the said MONDAY, OCTOBER 3, 1864.—By order,

CHAS. WORRELL, Chief Clerk of the Department of Works, 1, Edward-street, Hampstead-road, September, 1864

TO CONTRACTORS and OTHERS.—LEADON VALLEY COMMISSION.—COUNTY of GLOUCESTER.—The Commissioners of Sewers hereby give notice, that they are desirous of entering into a CONTRACT for the execution of certain Works, in connexion with the WIDENING and DEEPENING of the RIVER LEADON, in the county and they hereby invite any person willing to undertake the same to make proposals for that purpose to the Commissioners. The plan, specification, and sections of the works required may be seen at the Office of Mr. WM. VINER ELLIS, 6, Queen-street, Gloucester, the Clerk to the Commissioners, to whom proposals, in the form attached to the specification, must be addressed, on or before the 8th day of OCTOBER next. The Commissioners do not pledge themselves to accept the lowest or any proposal.

Gloucester, September 23, 1864.

TO BUILDERS and OTHERS.—Persons desirous of CONTRACTING for the EXECUTION of ADDITIONS and ALTERATIONS to the ROYAL OAK HOTEL, Sevenoaks, Kent, can apply by letter only, to HARRY R. NEWTON, Architect, 6, Argyll-street, Regent street, London, W.

TO SEWER CONTRACTORS and OTHERS.—The Local Board of Health for the District of Watford are prepared to receive TENDERS for the CONSTRUCTION of about 7,000 feet of 15 inch. PIPE SEWER, and about 9,340 feet in length of smaller Pipe-sewer, with the necessary gully gratings, inspection and ventilating shafts. Plan and specification may be seen, and printed copies of the specification, schedule of prices, and form of Tender, on payment of 10s. obtained, at my Office, in Watford, on and after the 17th SEPTEMBER instant; and sealed Tenders, endorsed "Tenders for Drainage," must be delivered or sent to me on or before the 6th OCTOBER next. The Board do not bind themselves to accept the lowest or any Tender, and reserve to themselves the right of subdividing the contract, and letting separately one or more of the divisions described in the specification.

JOHN SEDDON, Clerk to the Local Board.

Watford, September 16, 1864.

TO BUILDERS.—Persons willing to CONTRACT with the Justices of the County of Kent for the ERECTION of a POLICE STATION at Sittingbourne may see the plans and specifications at the Office of the County Surveyor, Maidstone, any day except Sunday, between the hours of TEN and FIVE The work is to be taken down carefully to the form to be obtained at the County Surveyor's Office, where sealed Tenders, endorsed "Tender for Sittingbourne Police Station," are to be delivered by TEN o'clock in the forenoon of FRIDAY, the 28th day of OCTOBER next, and persons tendering are to be in attendance at the Courts of Justice, Maidstone, at HALF-PAST TWELVE o'clock on that day. Neither the lowest nor any other Tender will be accepted unless approved of in all particulars, and security will be required for the performance of the Contract.

H. A. WILDES, Clerk of the Peace.

Maidstone, September 30th, 1864.

TO BUILDERS.—Persons wishing to give TENDERS for the CONSTRUCTION of VAULTS, WAREHOUSE, STABLING, and DWELLING-HOUSE, at Ramsgate, are invited to make application at the Offices of Messrs G. M. HINDS & SON, Architects, Ramsgate, where plans and specifications may be seen and full information given.

THE PAPER STAINING COMPANY (Limited) are now prepared to EXECUTE all ORDERS for the Home and Export Trade in Machine and Hand-made PAPER-HANGINGS with promptitude, and at prices suited to all buyers. Orders to be sent to the Factory, 91, Goswell-road, London, E.C.

By order of the Directors.

PAPERHANGINGS.—To Builders, Landlords, Contractors, and Others.—Important SALE of English and French PAPERHANGINGS now going on at 36, Euston-road, N.W. The whole of the new and extensive Stock to be disposed of at an immense reduction, previously to the Removal of Business.—Nos. 1 to 36 Euston-road, 2, 3, 4, Judd-street.

MEDIÆVAL PAPERHANGINGS, from the Thirteenth to the Sixteenth Centuries. Designed by G. T. ROBINSON, ESQ. Manufactured by WM. WOOLLAMS & CO. 110, HIGH STREET, near Manchester-square, London, W. May be obtained of the principal Decorators.

Extracts from notices in the newspapers and publications:—

"Conventionalized patterns, often displaying great beauty of form, characterize the examples sent to us. With a few exceptions, the colouring of the specimens is commendable, in many it is worthy of the highest praise."—*Art Journal.*

"The designs are exceedingly elegant, and the colours good and well arranged. Some of the patterns are of really excellent art character, suitable for mansion chambers and galleries, or they may be used as decorations in church decoration."—*Gore's Builder*

"The majority of the patterns are exceedingly satisfactory, and not expensive."—*Builder*

"These designs are infinitely varied, yet always consistent and effective; the colouring is pre-eminently good, both in the selection of tints, and in harmonious combination; and the quality of the paper is of the richest order."—*Art Journal.*

CROGGON and COMPANY, Manufacturers of PATENT ASPHALTE ROOFING, BOILER, RAILWAY, BLEACHERS', and PATENT ROOFING FELT, For Damp Walls, and Lining Iron Houses. DOWGATE HILL, London; 2, GORE PIAZZA, Liverpool; and 59, GEORGE SQUARE, Glasgow.

GEORGE REES, 57, DRURY LANE.
Four doors from Drury-lane Theatre. Established in 1800.

NORWICH UNION FIRE OFFICE.—THE BONUS YEAR.

THREE-FIFTHS of the Profits of the Company are periodically distributed as a Bonus to parties insuring, who have thus from time to time received from the Society sums amounting in the aggregate to nearly £600,000.

A FURTHER BONUS of £240,274. has now been declared, and will be paid on the renewal of existing Insurances at 25th Lelmas, 1864, and the three following Quarters.

EXAMPLES OF PREMIUMS REDUCED BY THIS BONUS.

No. of Policy.	Sum Insured.	Annual Premium.	Reduced Premium for 1864.
	£	£ s. d.	£ s. d.
441,411	92,540	222 4 4	100 18 2
454,156	12,000	63 0 0	35 0 0
484,173	6,300	31 14 0	15 16 8
500,975	1,000	7 10 0	4 6 4

THE RATES OF PREMIUM ARE IN NO CASE HIGHER than those charged by the other principal offices giving no Bonus to their Insurers.

No charge is made for the Policy or Stamp when the Insurance exceeds 200 for Insurances transferred from other offices.

The Business of the Company exceeds Seventy Millions, and, owing to the liberality with which its engagements have been performed, is rapidly increasing. The duty paid to Government for the year 1863 was £4,322. 11s. 9d.; the amount insured on Farming Stock was 10,234,272l.

The Norwich Union Fire Office is the LARGEST OFFICE making a return to its Insurers.

For Prospectuses, apply to the Society's Offices, 99, Fleet street, E.C.; and Surrey-street, Norwich.

Insurances against Loss by Fire are effected by the Phœnix Company upon every description of Property, in every part of the world, on the most favourable terms.

The promptitude and liberality with which its engagements are always met by this Company are well known; and the importance of its relations with the public may be estimated from the fact that since its establishment it has paid more than Eight Millions Sterling in discharge of Claims for Loss by Fire

Insurances with this Company expiring at Michaelmas must be renewed within fifteen days thereafter, or they will become void.

Every description of Fire Business is transacted at the principal Offices, Lombard-street and Charing-cross, and with the respective Agents throughout the United Kingdom.

ALBERT INSURANCE COMPANY, LIMITED (FIRE and MARINE).—Premiums charged estimated by the individual risk; the utmost liberality maintained in every transaction. Agents wanted.—Offices, 8, Finch lane, or 7, Waterloo-place, Pall-mall.

MORELL THEOBALD, Manager Fire Department.

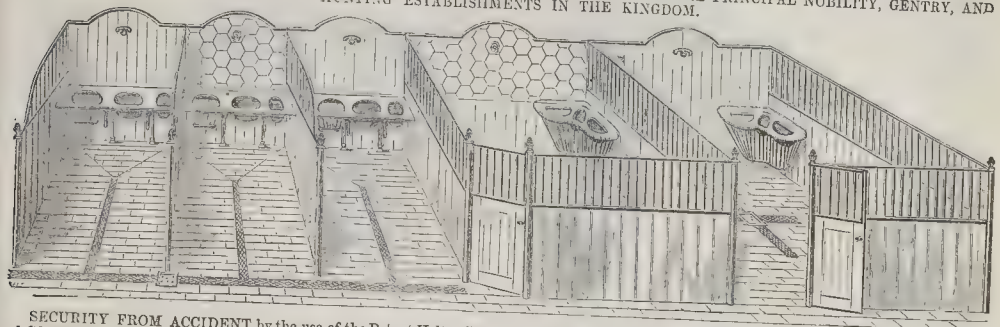
AWARDED TO

COTTAM & COMPANY,

No. 2, WINSLEY-STREET, LONDON, W.

FOR PROGRESSIVE AND GENERAL IMPROVEMENTS IN



STABLE FITTINGS AND HARNESS BRACKETS.

PATENTEES AND ORIGINAL INVENTORS OF

THE IMPROVED SYSTEM OF STABLE AND HARNESS FITTINGS,

PATRONISED BY THE ENGLISH AND FRENCH GOVERNMENTS, AS WELL AS BY THE PRINCIPAL NOBILITY, GENTRY, AND HUNTING ESTABLISHMENTS IN THE KINGDOM.

SECURITY FROM ACCIDENT by the use of the Patent Halter Guide and Improved Curved Top-plate; PROMOTION of HEALTH, COMFORT, and CONDITION, by the cleanliness and power of resisting infection of the Mangers and Troughs; and also of the Patent Drop Cover, to curtail the quantity of water to be imbibed. ECONOMY in the USE of FOOD, from the improved formation of the Fittings, and by means of the Patent Portable Seed-box, are some of the peculiar recommendations of Cottam's Patent Componised, Enamelled, and Galvanized Iron Fittings for Stalls and Loose Boxes.

COTTAM'S PATENT COMBINED SADDLE and HARNESS BRACKETS; IMPROVED SURFACE GUTTER, WITH MOVEABLE SAFETY COVERS; Sanitary Traps, Cheap and Durable Corn-bins, and every Article requisite for the Stable and Harness-room.

COTTAM'S newly-invented REGISTERED NOISELESS MANGER SHACKLE and GUIDE FOR HALTER-STRAP, and IMPROVED VENTILATING HARNESS BRACKETS, are only to be obtained from the Inventors, and can be seen in use at their Manufactory.

COTTAM & CO. exhibit for inspection, at their Iron Works, 2, Winsley-street, W., an extensive range of full-sized Stalls, Loose Boxes, and Harness Rooms, the most complete that can be imagined.

ILLUSTRATED CATALOGUES and LITHOGRAPHS free, on application to COTTAM and CO. 2, WINSLEY STREET, Oxford-street, London, W.

COTTAM & CO.'S only address in London, is 2, WINSLEY STREET, W.

N.B. WINSLEY STREET IS THE STREET OPPOSITE THE PANTHEON.

Orders requiring Despatch and Punctuality can be executed in a few days.

BROWN BROTHERS' PATENT KITCHEN RANGES,

WITH SELF-ACTING ROASTER,

Accomplish twice the amount of cooking performed by any other Kitchener of similar size, and with half the amount of fuel. They will cure the most inveterate smoky chimneys when all others have failed, and obviate the necessity for chimney-sweeping. They are universal favorites for their unequalled simplicity of action, are perfect in themselves, and do not cost one fourth as much for Range, as other Ranges. With but one small fire, which performs every cooking operation, they simultaneously provide for Steaming Apparatus, and furnish an abundant supply of boiling water for Baths, Conservatories, &c. They require no dampers or brick flues, and combine the cleanliness of a close kitchener with the perfect ventilation of an open fire.

THE PATENT AUTOMATON ROASTER

Revolves of itself immediately on being placed in front of the fire, and is considered by thousands who have used it to far surpass all other methods for effecting the process of actual roasting.

Builders and others would do well to inspect the Ranges in operation, and the NEW "ECONOMIC" RANGE, with large Wrought-iron Boiler and Oven, specially adapted for Dining-houses, Villas, &c., at very moderate cost, at

BROWN BROTHERS' ONLY LONDON DEPOT, 43 CRANBOURN-ST., W.C.

Exhibition Medal. Catalogues and Designs post-free. Prices from £2 8s. to 200 Guineas.

N.B.—BROWN BROTHERS (established upwards of 40 years) are connected with no firm of similar name.

"A form of Range, which, with Apparatus in connection with it, deserves particular attention."—"BUILDER," October 11, 1862.

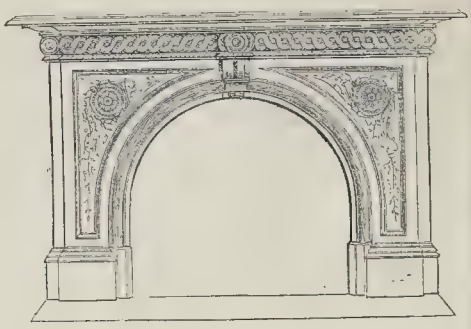
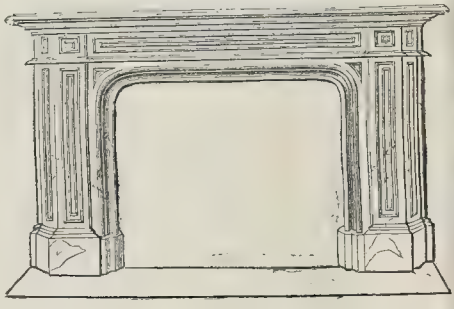
PRICE-LIST and FULL PARTICULARS FURNISHED on Application.

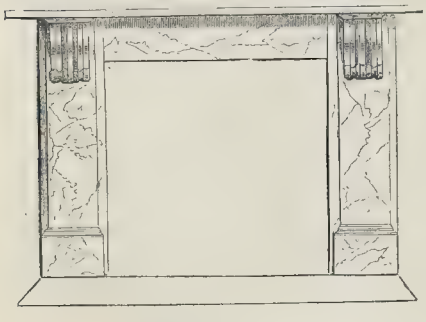


THE RICHEST ASSORTMENT OF CHIMNEY-PIECES

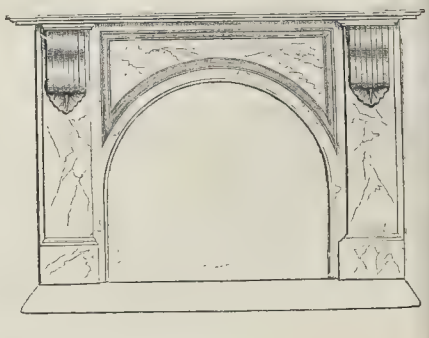
IS AT



WILLIAM S. BURTON'S.



It embraces the following Foreign and English Marbles:—Italian Statuary, Brocatelle d'Italie, Brocatelle d'Espagne, Brocatelle Brune, Griotte d'Italie, Jaune Fleuri, Vert Antique, St. Remis, Black and Gold, Black, Rouge Royale, Vein, &c. &c.; and it includes the undermentioned styles: Renaissance, Louis XIV., Louis XV., Pompadour, Louis XVI., Moderne, à Balustres, &c. &c. Most of the designs are new; while several, from their rich and exquisite sculpture, are veritable works of art. A complete assortment of Enamelled Slate Chimney-pieces is also on show, including many elegant designs. The Prices range from 1*l.* 8*s.* to 100*l.*



WILLIAM S. BURTON,

GENERAL FURNISHING IRONMONGER,

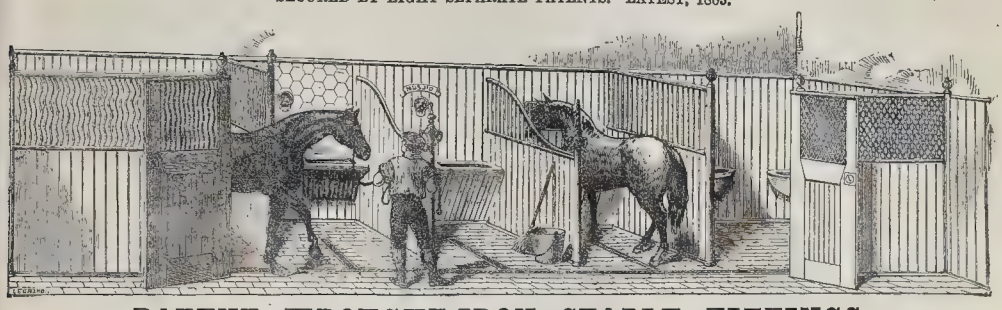
BY APPOINTMENT TO H.R.H. THE PRINCE OF WALES,

Sends a Catalogue gratis, and post-paid. It contains upwards of 500 Illustrations of his illimited Stock of Sterling Silver and Electro Plate, Nickel Silver and Britannia Metal Goods, Dish Covers, Hot-Water Dishes, Stoves, Fenders, Marble Chimney-pieces, Kitchen Ranges, Lamps, Gaseliers, Tea Trays, Urns, and Kettles, Clocks, Table Cutlery, Baths, Toilet Ware, Turnery, Iron and Brass Bedsteads, Bedding, Bed-room Cabinet Furniture, &c. with Lists of Prices and Plans of the TWENTY LARGE SHOW-ROOMS at

39, OXFORD-STREET, W.; 1, 1A, 2, 3, and 4, NEWMAN-STREET; 4, 5, and 6, PERRY'S-PLACE; and 1, NEWMAN-YARD, LONDON.

ESTABLISHED 1820.

ST. PANCRAS IRON WORK COMPANY,



OLD SAINT PANCRAS ROAD, LONDON, N.W.

APPROVAL OF THE ROYAL VETERINARY COLLEGE.

THE MEDALS OF ENGLAND AND FRANCE,

And the Medals and High Recommendation of the Royal Agricultural Societies of England and Ireland.

SECURED BY EIGHT SEPARATE PATENTS. LATEST, 1863.

PATENT WROUGHT-IRON STABLE FITTINGS

SHOULD BE ADOPTED FOR THE FOLLOWING REASONS, viz.:—

That the BREAKAGES in Cast-Iron Fittings are numerous, and that one fracture from a kick or other cause, may occasion an injury to a Horse, and involve a loss equal to the entire expense of fitting up the Stable. The fear of this has led to the use of wood, and, in the case of Cast-Iron GUTTERS, to the adoption of another and less effective mode of draining.

PATENT ENAMELLED TOP PLATE MANGER, with RACK & WATER-TROUGH,

The whole of which, except the Rack, being enamelled, can be kept as clean as a DINNER PLATE.

THE HALTER BALL, ATTACHED BY A NEW IMPROVEMENT, WORKS NOISELESSLY, AND ALMOST WITHOUT FRICTION.

PATENT FASTENINGS FOR THE DOORS OF LOOSE BOXES.

These Catches and Hangings work easily, are self-acting, and cannot be put out of order: by their use all projections by which horses are often blemished are rendered impossible,—advantages peculiarly their own.

THE PATENT HARNESS FITTINGS

Keep the Harness and Saddles in shape, and are constructed so as to admit the air getting to the underside of them when hung up, thereby insuring a quick and perfect airing from any wet or moisture.

EVERY DESCRIPTION OF STABLE FURNITURE.

Architects who have not seen these Fittings are requested to write for Engravings, as they are unlike those of any other maker, and were admitted to excel all the work of their class in the Exhibition. They can be seen in first-class stables in almost every county in England; and MUSGRAVE, BROTHERS, are now fitting several very large establishments under directions of London Architects, noted for adopting only what is the best of its kind. Particulars of these, as well as of MUSGRAVE'S PATENT SLOW-COMBUSTION STOVE, will be forwarded on application to

MUSGRAVE, BROTHERS, ANN STREET IRON WORKS, BELFAST.

THE DENNETT ARCH.

Allowed to be the cheapest fireproof construction known, and used with the greatest success for the last ten years in the Midland Counties, and has been adopted by G. G. Scott, esq. for the New Foreign Offices, used in any form of arch, groin or dome; turned to any length, width, or height, forming a perfect floor and ceiling in one mass, from 2½ inches in the crown to any required thickness.

Address to the Patentees, England and Canada,

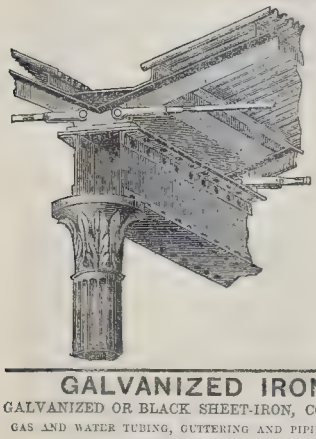
A. & R. DENNETT & CO. NOTTINGHAM.

TESTIMONIAL.—"I have made use of Messrs. Dennett & Co.'s material for Fireproof Arching, and though I have, happily, had no practical experience of its efficiency as against fire, I can bear witness to its strength, and its extreme convenience of application. I have made use of it in positions in which I should have found it difficult to introduce any other fireproof material, and it has this advantage, that the arches constructed of it are so entirely in one mass that they cover the space like a compact shell or inverted basin, and are, consequently, almost wholly free from lateral pressure.

"GEO. GILBERT SCOTT, 20, Spring Gardens, London."

BROWN & GREEN'S
PATENT KITCHEN RANGES.

PRIZE MEDAL, 1862.



These Ranges combine the latest improvements with great simplicity and durability. They afford facility for roasting meat in front of the fire without interruption to the action of the oven, hot plate, boiler, &c. The Ovens are well ventilated, and perfect either as roasters, or for baking bread or pastry. For Efficiency, Economy, and Ventilation, and

CURE OF SMOKY CHIMNEYS,

these Ranges are unequalled. They are of all sizes and prices; and when fitted with Bath and Steam Apparatus, &c they form the most complete appointment for good establishments. Designs, &c. may be had on application at THE LONDON WAREHOUSE,

72—74, BISHOPSGATE STREET WITHIN.

"One of the best arrangements of the 'Kitchener.'"—See *Builder*, Sept. 6, 1862.

AUSTIN'S IMPERIAL PATENT SASH

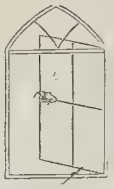
and BLIND LINES.

To BUILDERS, CARPENTERS, and BLIND MAKERS.

J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his

IMPERIAL PATENT FLAX SASH-LINES,

of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.



They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

THE BEST STEAM-THRASHING MACHINERY MADE.

WILLIAM BISSELL, Wholesale Ironmonger, Union-street, Wolverhampton, Proprietor of the Patent EQUI-ACTION RIM and MORTISE LOCKS, Patentee of the FLOORING CRAMP, and sole Agent for HAIGH'S PATENT MORTISING, BORING, and DRILLING MACHINES.

The most POWERFUL, SIMPLE, EASY, and DURABLE in the market, containing the best mechanical principles of LOCKING and LEVER MOTIONS.

Testimonials of the highest class can be shown from Builders in almost every part of the United Kingdom.

A Boring and Drilling Apparatus, which can be removed by one man.

For list of Machinery, with a set of eight chisels, coredrift, and Boring Apparatus.

Ditto, ditto, without the Boring Apparatus.

TO BUILDERS, CONTRACTORS, &c.

WOOD-CUTTING MACHINERY.—Improved Self-acting Circular Sawing, Planing, Moulding, Circular Moulding, Tenoning, Lever and Foot Mortising, Sweep-Sawing, Boring, Cross-cutting, Tonguing and Grooving, and Pendule Hat-making Machinery, &c.—For particulars apply to THOMAS LADYMAN, Reddish, near Manchester.

FIRE-PROOF CONSTRUCTION.—FOX & BARRETT'S PATENT.

This improved system of fire-proof construction has been most extensively adopted and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The advantages are ECONOMY with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought iron filled in with concrete, so constructed that each floor becomes in effect a beam of artificial stone with ribs of iron; the structure possessing great strength and rigidity, and forming a fire proof foundation adapted to receive a finished surface, either of the ordinary flooring boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling houses and domestic buildings, within the reach of everyone.

Further information may be obtained of the Proprietor of the Patent,

HART & SON,
WHOLESALE & MANUFACTURING IRONMONGERS,
53 to 58, WYCH STREET, STRAND,
LONDON, W.C.

THE FURNISHING OF BED-ROOMS.

HEAL & SON have observed for some time that it would be advantageous to their Customers to see a much larger selection of Bed-room Furniture than can conveniently be displayed, and in order to give a greater choice of the style and effect of the different descriptions of Furniture, it is necessary that each description should be placed in separate rooms. They have therefore erected large and additional Show-rooms, by which they are enabled not only to extend their Show of Iron, Brass, and Wood Bedsteads, and Bed-room Furniture, beyond what they believe has ever been attempted, but also to provide several small rooms for the purpose of keeping complete suites of Bed-room Furniture in all different styles.

Japanned Deal Goods may be seen in complete suites of five or six different colours, some of them plain and ornamental, and others of a plainer description. Suites of Stained Deal Gothic Furniture, Polished Deal, Oak, and Walnut, are also set apart in separate rooms, so that customers are able to see the effect as it would appear in their own rooms. A suite of very superior Gothic Oak Furniture will generally be kept in stock, and from time to time new and select Furniture in various woods will be added.

Bed Furnitures are fitted to the Bedsteads in large numbers, so that a complete assortment may be seen, and the effect of any particular pattern ascertained as it would appear on the Bedstead.

A very large Stock of Bedding (HEAL & SON'S original trade) is placed on the BEDSTEADS.

The Stock of Mahogany Goods for the better Bed-rooms, and Japanned Goods for plain and Servants' use, is very greatly increased. The entire Stock is arranged in eight rooms, six galleries (each 32 feet long), and two large ground-floors, the whole forming as complete an assortment of Bed-room Furniture as they think can possibly be desired.

Every attention is paid to the manufacture of the Cabinet-work and they have just erected large Workshops on the premises for this purpose, that the manufacture may be under their own immediate care.

Their Bedding trade receives their constant and personal attention, every article being made on the premises.

They particularly call attention to their Patent Spring Mattress the Sommier Elastique Portatif. It is portable, durable, and elastic, and lower in price than the old Spring Mattress.

HEAL & SON'S ILLUSTRATED CATALOGUE of Bedsteads, Bedding and Bed-room Furniture sent free Post. 196, 197, 198, Tottenham Court-road, London.

DESACHY'S FIBROUS PLASTER.

GEORGE JACKSON & SONS,

HAVING BECOME THE PROPRIETORS OF THE PATENT RIGHTS IN

DESACHY'S FIBROUS PLASTER,

Beg to call the attention of Architects to its Capabilities.

It is adapted for the speedy and economical production of any coffered or circular work, waggon-headed ceilings (all bracketing being avoided, as it is fixed to the joists direct), fluted and plain columns, panelled dados, all kinds of dasher, &c.; for the linings of walls and ceilings, and for all purposes of ornamental plaster.

The advantages are great. It is of great lightness and of excellent quality; it is not inflammable, and is ready to be painted immediately after it is made; it has been used (under the direction of Owen Jones, esq.) for the ceiling of St. James's Hall; at Messrs Osler's, Oxford-street; Mr Hancock's, New Bond street; the Crystal Palace Bazaar; the Home for the Aged, South Lambeth; and at various other Works.

SPECIMENS CAN BE SEEN AT 49, RATHBONE PLACE.

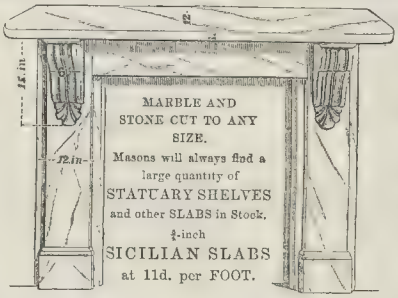
ARCHITECTS, BUILDERS, MERCHANTS, SHIPPERS, AND MASONS

Will find that the CHEAPEST HOUSE in LONDON for the following Goods is at the

EMPORIUM, J. W. BIRD & CO.'s, 143½ and 145, EUSTON ROAD, N.W.



BOX STONE CHIMNEY PIECES
for 5s. 6d.
Truss ditto ditto, 11s. 9d.

MONUMENTS AND TABLETS
in great variety, equally low in price.

MASONS' WORK OF ALL KINDS CONTRACTED FOR,
AND EXECUTED WITH DESPATCH IN TOWN OR COUNTRY.

A STOCK OF
500 CHIMNEY PIECES
always to choose from.

Price List on Application.

MARBLE BOX CHIMNEY PIECE
for £1 5s.
First-class Bed-room ditto, £1 10s.

FIRST-CLASS
TRUSS MARBLE CHIMNEY PIECES
from £2 5s. to £3 5s.

A WELL-CARVED
STATUARY CHIMNEY PIECE
with 13½-inch Piers,
suitable for a Drawing-room, which must be seen to be believed,
FOR THE SUM OF £6.
Net Prompt Cash.

Price List on Application.

STATUARY AND OTHER MARBLE CHIMNEYPIECES.

ARCHITECTS, BUILDERS, and MASONS will find at

W. WILLETT'S SHOW-ROOMS, MARYLEBONE ROAD, N.W.

OPPOSITE THE YORKSHIRE STINGO,

A LARGE ASSORTMENT of STATUARY & COLOURED MARBLES, also ENAMELLED SLATE, and STONE CHIMNEYPIECES, at Prices to command their Orders.

CARVED TRUSS STATUARY MARBLE CHIMNEYPIECE, FROM £6. AND UPWARDS.

ESTIMATES WILL MEET WITH PROMPT ATTENTION.

IMPORTANT TO ARCHITECTS, ENGINEERS, BUILDERS, RAILWAY, AND OTHER COMPANIES.

VIEILLE MONTAGNE ROOFING ZINC.

Company's General Agency, 12, Manchester Buildings, Westminster.

Zinc properly laid has been proved by most extensive and long experience in France, Belgium, and Germany to be a most secure, durable, and economical covering, and is now preferred to all other materials for roofs. Its extreme lightness makes it most valuable for covering buildings requiring large spans with comparatively light framing. On a rough calculation it may be estimated that not less than 41,000,000 square feet is the average quantity of Roofing surface now annually covered in the above countries alone. Within the last few years persevering efforts have been made to introduce into England proper workmanship, in accordance with the principles which are observed on the Continent, and which alone can secure the sound and perfect construction of a Zinc roof. To aid in extending as much as possible the knowledge of these simple rules, models showing all the details are to be seen in the Architectural Exhibition in Conduit-street, and the following, selected out of a very great number of recently constructed roofs, are referred to as examples:—The Patent Granary, West-India Docks; Copenhagen Works, Limehouse; a private house in Holland Park; Homes for Poor Merchants' Clerks, Muswell-hill; a large Warehouse, 77, Thames-street; Ship roof, Sheerness Dockyard; the Victoria Station, Pimlico; the Stations in the Metropolitan Railway; the Stations of the Madras Railway Company (400,000 feet); the Warehouse of Messrs. Oakes, Brothers, & Co. Madras (20,000 feet); the Refreshment Rooms at the Exhibition; the Verandah of the Horticultural Society's Conservatory; Gloucester Railway Station; Messrs. Horniman & Co.'s Tea Warehouse, Wormwood-street; Messrs. Hoare & Co.'s Brewery, Smithfield; Cape Town and Wellington Railway (60,000 feet); Fifty new Dwelling Houses at Palace Gardens-terrace, Kensington; Twenty ditto, Inverness-terrace, Bayswater.

Plans, Estimates, and all useful information will be furnished, without charge, by applying to either of the Directing Architects.

JAMES EDMESTON, 5, Crown-court, Old Broad-street.
R. G. FISHER, 12, Manchester-buildings, Westminster.

N.B. No covering can be more economical, durable, and secure than Zinc when well laid, but good Zinc badly laid will spoil the roof, and, with a view still further to encourage good work, a special Discount will be allowed to all persons upon the Zinc used in roofs, when certified by either of the above Architects to be properly laid.

FOR THE
DECORATION OF
PUBLIC AND PRIVATE
BUILDINGS
SUPPLIED WITHOUT CHARGE.

The Builder.

VOL. XXII.—No. 1130.

The Architecture of the City of London.

HE foreigner in London, whose judgment is so often deprecated, but not for whose delectation certainly are produced the cement mouldings and wall-covering, or flaring colours in brickwork, the eccentricity, monotony, or mere imitation, the lack of general breadth, as of duly studied detail, and the griminess, which characterize the architecture of the metropolis generally, should if possible be induced to direct his steps to that quarter of the City to which we adverted in a former article,* and for the sake of the chance of a more favourable opinion of our art-work than he is likely to arrive at otherwise. In the early morning, or on a Sunday, when there is little to distract attention, there may be realized from divers points about the Royal Exchange, some beauty of architecture that prevails over the blackness of several of the buildings, and is not unworthy to be named along with such effect as may be seen in certain other capitals. But, the afternoon-time of a day when there is any sunlight, and the route approaching from the west, offer most advantageous conditions for viewing the architecture from those points, and for seeing that which is disclosed in passing along several of the streets.

During the approach, the effect of the City churches, and of St. Paul's Cathedral, should be noticed; and we are not of the opinion expressed by one of our contemporaries, that the church of St. Martin, Ludgate, is an unsightly object, or damaging to the cathedral, and therefore should be removed. The view of the cathedral, with the spire in the mid-distance, has formed a favourite subject with water-colourists; and the fact is worth quoting as evidence that we are right. Now that the pursuit of different styles is so much substituted for the pursuit of art, opinions are warped by prejudices; and much of the merit which there may be in many works, is hardly supposed existent: it is not looked for; and those who might see the beauty, are, as it were, blind thereto. Of the works in this category, are the churches by Wren, and some of those by Hawksmoor. Albeit details in many of them are uncouth and bad, the outlines of the spires and towers, and the varying disposition of plan of the several upper stages of towers, and generally the effect of the number and variety of the features, together afford all the charm that has been during some time perceived in a prospect of the City, and is still recognized by many architects.

In the views referred to, about the Exchange, however, there is little difference seen in the style of the buildings, or none that goes to the extent of discord. The effect of variety indeed there is, which is always pleasing, or, more exactly speaking, is essential. Sir Charles Barry, we remember, once registered an opinion in favour of the exhibition of two prominent objects, such as the Victoria Tower of the Houses of Parliament, and a dome of Italian character, of different systems of architecture, in the same field of view; and certainly there are many instances of happy effect by such conjunction, the best known being those of the different views of Oxford. But variety of general effect and outline may be pleasing, though not the entire dissonance that is apt to be felt when details can be discerned, and are found to be of totally different character. Detail very soon comes to play its part; moreover, the minute examination of it aimed at, in the very fact of the elaboration, by the designer, results in what is one of the materials of which the judgment of the entire work of art is mentally built up. We have therefore always held that there was disadvantage from the conjunction of buildings of totally different styles, as side by side, both to the effect realized by architect-observers, and as regards appreciation of the art-work by the public.

The buildings in the City, of decided Gothic character, are some of them important; but there are not many of them. From the area in front of the Mansion House, none come into view; whilst also must be looked for elsewhere in the City, architecture of that party-coloured, and round-arched modern fashion, wherein small shafts to carry the arches, label-mouldings, and chamfers, are features. In the views from this area, the front of the Globe Insurance Office at the angle between Cornhill and Lombard-street, is the chief eyesore,—though there are other cement fronts in King William-street, not much better in character; and those in Princes-street, of the Britannia Life Insurance Office the Union Bank of London, and the London Joint Stock Bank, which might have been tolerable in stone, are just now shining, but greasy, in all the bedizenment of new paint. In the grouping of the several structures, however, which there are of commanding outline, in their meritorious details, in the central feature of the portico of the Exchange, and in the open space, and the happily-arranged broad foreground of flagging, with even the statue of the Duke of Wellington, poor as are the details of the pedestal, the City possesses a combination of art-work of which London may be proud. The Bank, now improved in general outline by the addition which was made to the centre of the Threadneedle-street front, fills a considerable space. Defects in this building, as in the introduction of columns that are without use, become more apparent as time goes on, and insight into the principles of architectural design is obtained: let us hope that the merit of the grouping, and much else that there is yet in the Bank, may not be disregarded, and the building suffer the fate, in this age of fashion and change, as much as progress, of many a really great and once-admired effort and production, of being rated lower than its merits. Some of the details the most characteristic of Soane's work, it may now be seen, were badly proportioned to one another,—as the projection of the shafts of pilasters, to the bulk of the capitals. We may observe that the addition to the centre, whilst improving the general outline, and correcting much of the depression which was the result of the height of the neighbouring buildings, seems to have depressed the columns in effect, and increased the appearance of their uselessness, to which the iron railings previously contributed.

There is little else in Princes-street, except the elegant Italian doorcase,—which was, we believe, designed by the late Mr. Joseph Gwilt,—to the court-yard of Grocers' Hall, and a building with Soanean features of detail, generally plain, and with two columns at each end above the ground-story. In Threadneedle-street beyond the Bank, on the same side, are seen the Sun Fire Office, the North British and Mercantile Insurance Offices, of which we have recently published a view,* and the Magnetic and Submarine Telegraph Offices, also illustrated in our pages; whilst the vista is terminated by the Imperial Insurance Company's Offices. In Cornhill, the building of the County Fire Office, the pile of buildings of which the centre was lately occupied by Messrs. Sarl (and is about being appropriated to the business of the Credit Foncier and Mobilier of England Company), and the building occupied by the National Discount Company come into view, with the tower of St. Michael's Church, Cornhill, beyond them. In King William-street, the near-distance has the church of St. Mary Woolnoth, by Hawksmoor, the Monument finely terminating the vista. Eastward along Cheapside, Bow Church, with its tower and spire, scarcely matched even in the Gothic period, is seen. There is a gap in the north side of the Poultry, east of St. Mildred's Church; but a new building is already commenced; and in the rear is one, just finished, of good architectural character, forming an addition to the Union Bank. The opening of the new line of street from Blackfriars, will shortly produce a considerable alteration in the effect, opposite, or looking south-westward from the space before the Mansion House. If our foreign visitor move to the south side of the area, in front of the church of St. Mary Woolnoth, which is formed by the junction of King William-street and Lombard-street, he will see several works of superior character, the best of them being the building designed by Mr. I'Anson, originally the Colonial Assurance Office, but which is now occupied, in the ground-story at least, by Brooks's Bank. Mr. I'Anson's contributions to the good architecture in the City, have been duly acknowledged in these pages. The Lombard-street building here mentioned, and that next to it, by the same hand, are noticeable for the accordance of their style, and of their main lines, as those of cornice and basement; whilst the resulting harmony is coexistent with the requisite distinction, as between two buildings. In both these buildings, red granite is used, and the system has been adopted of constructing the basement of that material, and, in one of the buildings, partly polished and partly unpolished. It is worth considering whether this is not a better mode of using red granite than that wherein the material is in the form of polished shafts. Even previously to the production of the great contrast, by the darkening of stone, between the two materials, we apprehend that often the effect displaces that which may be considered to have been aimed at in the arrangement of the lines, and the disposition of the projections and recesses on plan. The exercise of self-denial in the use of new and valuable materials, would sometimes be attended with advantage. Moreover, it should be recollected that there is immense difference between polished and unpolished materials, in the force with which they strike the eye. The use of red granite in the form of very small shafts, which is general, seems to us to be nearer to right principle, than the application of the material to shafts of the columns of a regular order, even one so small as when forming part with a window-architrave. We are speaking of exteriors. But even the small shafts, polished, may strike with too much force. More consideration is certainly needed, than has yet been given, to questions of the right use both of granite and iron in combination with stone or brick. The

* See p. 678, *ante*,—"London Architecture, and the City."

* See p. 207.

colour and the sparkle in the one case, and the dark tone nearly amounting to black, in the other, attributes of the materials, are new elements in the hand of the designer, and not provided for in the rules laid down for architecture in stone. The most satisfactory works we are acquainted with, wherein one of these materials is used in a building along with ordinary stone, are works in which the office of the material is simply decorative, or where being structural it is rather supplementary than necessary,—as, in the former case, where the polished granite is used jewelwise in panels, or the iron-work as filling in to apertures of various kinds; and, in the second case, where the shafts are in jambs, as nook-shafts, scarcely to be regarded as members *bearing* arch-mouldings, or are wholly detached and placed for intermediate support of a lintel which without some very slight addition would seem too long in the bearing. This, we opine, was the view taken in each case, by Professor Cockerell, judging from the Sun Fire Office, and some other buildings by him. In the North British and Mercantile Insurance Offices, by Mr. Thomas Piper and Mr. J. E. Goodchild, polished granite is used in door-cases of the basement, and in the columns of the central doorway; but the material is a slate-coloured kind; and this has advantages. Granite for an entire base, or the ground-story of a front, and not frittered in many minute forms, gives so much appearance of strength, that its value, as there rightly used, is at once to be admitted. The effect here resulting from the colour and polish, without other decoration, coupled with the idea of strength, serves exactly the end aimed at, but indifferently realized, in the stone or cemented ground-story with rusticated work, of the common brick-built London house; whilst the use of plain granite in the basements of fronts in the City, is all the more to be commended, as the piers in the ground-story must be narrow, for the sake of light. Even as in some shop-fronts in the City, the use of granite for the entablature, as well as the piers, mitigates considerably the defect incidental to a basement that is generally of glass. To the east of the buildings in Lombard-street to which we have above referred, is one front of the County Fire Office and Provident Life Office.

The area in front of the Mansion House, however, is not the only location in the same quarter of the City, where fine prospects are to be obtained, and where the general effects and the details of the buildings suggest thoughts relating to the practice and the tendencies of modern architecture. The works that may be seen at the eastern end of the Exchange, and looking down Bartholomew-lane in passing, down Broad-street, and in the continuation of Threadneedle-street, are most remarkable as productions all, except the Bank and the Anction Mart, of comparatively recent date, and as the inauguration of a veritable progression, still in process of achievement, in the architecture of a certain class of works. By the way, it may be noted that the several authorities to whom is due the allotment of ground, east and west of the Exchange, to mere area of flagged pavement, by such disposition effected an arrangement of the utmost value both to the Exchange, and to the many buildings for which the spaces afford stations of observation, or a foreground. From one convenient point at the north-eastern corner of the Exchange, may be seen the Bank, the Sun Fire Office, the North British and Mercantile Insurance Offices, already particularly referred to; the Telegraph Offices, by Mr. Horace Jones (the building which was so much injured by fire on Monday night); Mr. John Gibson's Imperial Insurance Offices; the building next, in Broad-street, occupied by the Ocean Marine Insurance Company and the London and Brazilian Bank; and, again in Threadneedle-street, the Bank of London, formerly the Hall of Commerce; the City Bank, by Messrs. Moseley; the Bank of Australasia, by Mr. P. C. Hardwick; the building by Mr. Currey next to the last-named bank, westward, of which the ground-story was first of all a shop, but which now is entirely appropriated as chambers; and the highly decorative red brick and stone building, by Mr. John Shaw, the upper floors of which are occupied as offices. Mr. T'Anson's Royal Exchange Buildings, in red brick and stone, occupy the greater portion of the eastern side of the flagged area; and the view southward shows the building of the National Discount Company, which was designed by Messrs. Francis. Nearly all the buildings we have just named as works of recent years, have been illustrated in our pages. Each of the works has considerable merit; and we have only to regret that the general street architecture of London, and the suburbs, and that of private houses and of premises devoted to retail trade, is so different.

Of all places that we know of, even in England, London is the one where the greatest contrast is found between the architecture of public and private buildings. It is not exactly that each man's "proper mansion-house, and home," "the theater of his hospitality," "a kinde of private princedome," does not seem "to the possessors thereof" deserving "by these attributes, according to the degree of the master, to be decently and delightfully adorned:" on the contrary, there is evidence of a concession to the desire for decoration, and enough to afford proof that the desire is natural and must exist. The lack of art which is conjoined with increasing use of the details of decoration, only mis-shapen and misplaced, and with the recourse to an increasing number of models, may arise from the fact that the demand for residences and shops is catered for by those who have made building their pursuit rather than architecture; or because, where the "master" is owner of the house, he will claim his John Bull privilege of doing what he likes with that which he calls his own. "What does it matter," he says, "if I build an ugly thing, or if as you tell me, I shall find out my mistake when what you call the mere fashion is gone by, or the novelty of the eccentric thing is worn off?" Herein he forgets that, in the public interest, it does matter what is presented to the public eye, and that as certain exhibitions are prevented as being injurious to public order or morals, it might be contended that what shocks or deteriorates the sense of beauty, which was conferred on man for enjoyment, for cultivation, and for enjoyment growing with the cultivation, should equally be denounced as injurious. The mode of interference may be difficult, preserving the liberty of the subject; and it would now be impossible to constitute a court of judicature or reference in the architectural profession; as it may always be. But the innate falsity of the *dictum* of the master of the house is shown, as also that there is an obligation upon him to seek advice, and to defer to those who have made special study of architecture. Now, in the buildings erected by public companies, there is an architect, who is generally a person of some experience with committees; and, practically, the decision on points which make the character of the design, becomes centered in him. The only injunctions laid upon him are such as this one, in the case of a bank, that the building must be bank-like; in short, the commercial object and taste must go together. But the appreciation of decorative effect, or the belief that "taste pays," seems to prevail in each of the buildings in the City, of the class we are adverting to. The contrast with them, of such adjacent premises as include shops is often great. Members meant to be decorative, are found in both; the application alone is different.

> "Yet shall, my lord, your just, your noble rules
> Fill half the land with imitating fools;
> Who random drawings from your sheets shall take,
> And of one beauty many blunders make."

In the new structures for the purposes of banks or insurance offices, which do not happen to have the principal frontage to a court, there are no novel questions to be solved quickly, and with the possible result of loss of architectural effect. Glass and iron need not enter into the composition of the front to a great extent; windows may be large, and yet the basement may have appearance of solidity. The respect for the rights of adjoining owners, helps to dictate the manner of lighting the principal room of a bank, in great part from a lantern or skylight.

But there are a considerable number of works at present in hand in the immediate neighbourhood of the north-east corner of the Exchange. Before naming some of them, we may mention that, looking down Bartholomew-lane, a new construction will be seen at the end. It is an extension of the front of the London and Westminster Bank, from Lothbury to the commencement of Throgmorton-street. The windows are exactly repeated; and the pier and statue terminating the old front have been removed, so as to form the termination as before corresponding with one westward. But as the line of street becomes curved towards Throgmorton-street, the new effect is not equal to that of the original design; and we do not quite see from the occupation of the new premises, that there was justification for carrying on the features of the original work. In new Broad-street, at Austin-friars, one of the few buildings in the City with Gothic features, is in hand. Those features however are confined here to the pointed forms of arches to several of the windows, and the cusping to some of them. In one story the arches are low and stilted from impost mouldings and piers: in the ground-story the openings are of diverse form, the windows being large elliptic-arched lights with a central shaft. The National Bank, a four-storied building of nine bays of windows, with Italian dressings, and cornice, which last conceals the balustrade, and with a rusticated basement exhibiting some well-carved consoles, is opposite: there is good work in it, but the effect is spoiled by the curved form of the front, following the line of the street, and by the painted name of the building. Broad-street seems to be the home of the different Marine Insurance Companies. Next to the large building of the Ocean Marine Company already named, and some time since illustrated, a building for the London and Colonial Marine Insurance Company, is receiving a certain sort of decoration, including carving of trusses and coats of arms to the stone basement. The building between the City Club and Gresham House, occupied by a Marine Insurance Company, is not a very recent one, nor now that it has become black, is it a very conspicuous one; but it deserves attention for the grouping of its doors and windows, with their dressings, the whole having a satisfactory effect with little ornament and no emblematic sculpture, unless what may be found in trusses to the door-heads, which have original character. There is the greatest possible contrast of treatment between this front, and that of the Marine Insurance Company nearest to the Exchange, where at least our claim for sculpture allusive to the purpose of a building, as an essential to architecture, is fully recognized, and by good carving too. The building, No. 10, Old Broad-street, in which are the offices of Messrs. Scrimgeour, has a front which is a curious contrast to everything near to it. It is generally in cement, now very black-looking; but there are panels of marble, and much floral and other ornamentation; and there is considerable variety in the forms of windows, and novelty in many of the features introduced. It is an exemplification of the fact that mere novelty and ornamentation are not enough; and it is far from harmonizing with the uses to which it is put. Gresham House is a great structure that no one studying the architecture of the City, should omit to see, to gain an idea of the multitude of offices for which room and light have to be found, and which go to form the character of the City. Gresham House, however, is now far surpassed in extent by the buildings which have just been completed in Leadenhall-street. As Gresham House occupies the site of the old Excise Office; the new East-India Chambers occupy that of the East-India House. The area is so extensive that there are several avenues of access, and for light, to the offices in the rearward part of the ground, and corresponding doorways in the façade in Leadenhall-street. This façade has the mouldings of the architraves of the windows somewhat elaborately ornamented; but though there is much merit in these, as well as in the central doorway, the length of the front, and want of recessed parts, give a general flatness. This, the India House avoided by the feature of the portico. That feature had a distinctive character, as in plan, which we are not exactly reconciled to losing. Indeed, the front was in several respects good, as also the arrangement of the entrance-hall, praised by Bartholomew. For general plan, few buildings could be worse than was the India House. The front to the new pile of offices, contrasted with the old front, exemplifies an immense change in taste. It may be an advance; but, that advance may yet be made, such merits as there were in the old work should not be forgotten. Owing chiefly to the blackness of the front, and somewhat to the narrowness of the street, they were little appreciated. Mr. Currey's work opposite, the front of the offices of the Peninsular and Oriental Steam Navigation Company, though the rich ornamental details are not entirely harmonious, is one of the very best in the City of London.

At the corner of Bishopsgate-street and Threadneedle-street, next to the South Sea House, a building has been commenced for the National Provincial Bank of England, of which Mr. John Gibson is architect. It is not yet sufficiently advanced in the front, for the decorative cha-

racter to be minutely described. It will contain a very fine room for the chief business of the bank, and externally an order of three-quarter Corinthian columns; but the reference to these does not give an idea of the decorative character, which will be partly derived from well-studied ornamentation, and from sculpture, which last is already considerably advanced. Great difficulties about "ancient lights," and others connected with adjoining properties, but similar to what are common in work in the City, attended the preparation of the drawings; and a good design that was first made was ultimately abandoned. These difficulties had nearly occasioned one of those defects, an irregular rounded corner. After much negotiation and contrivance, the irregular curve has been exchanged for a better form. This company, we may mention, has many buildings for branches in hand, in the country.

Farther on in Bishopsgate-street is the building appropriated to offices, and called Crosby House, which we have illustrated, noticeable as almost the only important work in this quarter of London, which is of decided Gothic character. It is by Mr. Wilkinson, of Oxford. It is certainly as meritorious, as it is remarkable for the elaboration of its ornament carved in stone. The general facing is red brick.

It is impossible even to name every new work about Cornhill and Gracechurch-street; and those in Fenchurch-street, Mincing-lane, and East-cheap must be left to the chance of some future opportunity. In Cornhill, there are one or two meritorious productions, besides those we have named, and besides Mr. Scott's porch of St. Michael's Church,—in particular the English, Scottish, and Australian Chartered Bank, by Mr. Baker, and a work by Mr. T. H. Lewis; but these were particularly described by us some time ago. At present there is a gap which is to be filled by the East London Bank. In Gracechurch-street, after Mr. Kerr's excellent work at the corner of East-cheap, the National Provident Institution, the most important thing is the Queen Insurance Building, a four-storied, narrow-fronted structure, recessed between the adjoining houses, and having a three-light window with polished red granite shafts, to each story, in the centre; which last is slightly recessed,—the style generally of the work being Italian. The building is crowned by a statue of the Queen. Peculiar character is given to the front, by the use of two descriptions of stone, Portland and Bath apparently, in alternate courses.

The most important building-work, recent, or at present in hand, however, is that in Lombard-street, and Clement's-lane, briefly mentioned in our first article; and this seems to be of sufficient extent and decorative character, to justify a distinct article.

WHAT IS THE INFLUENCE ON HEALTH OF THE OVERCROWDING OF DWELLING HOUSES AND WORKSHOPS? AND BY WHAT MEANS COULD SUCH OVERCROWDING BE PREVENTED?*

The Council of the Association, having determined on this as one of the special questions for discussion at the York meeting, have requested me to open the subject with a paper. The deep interest that I feel in it forbids me to refuse; although as I brought my views before the Department at the London meeting, in 1862,† and had urged them on the public for some years previously through various channels, I may seem to be telling an often-told tale. In this busy fighting world, however, a thing *must* be told many times before it will be heard; and the existing evils from inattention to this special matter are so enormous, so monstrous, so vitally important, that no amount of reiteration can be blamed or be deemed unnecessary so long as they remain unremedied.

In the paper already before the Association I gave numerous special cases of overcrowding to show its prevalence, specially on that occasion in London;—cases of overcrowding in dwelling-houses, workshops, barracks, and schools. I have re-visited within the last month many of the places described, and found them precisely in the same evil condition as before. Thus in Lincoln-court, Drury-lane, to which attention was directed, the first house examined on this last occasion contained thirty-seven persons in its eight rooms, and the second forty-five. In some of the houses, I was told, the number of the inhabitants was greater. Every room housed a family; some surreptitiously three. To get at the truth, as in all these cases, was difficult; but quite enough was admitted to prove that the conditions were not such as admit of healthful existence or decency. Of Charlotte's-buildings, Gray's-inn, the same may be said. The medical officer of that district speaks, in his last report, of small three-roomed houses, each containing seven families huddled together as closely and almost as promiscuously as sheep in a fold. In unhappy Bethnal Green, in Mile-end New Town,—in fact, in every direction,—the same fearful state of things may be witnessed. The extent to which the evil is increased when illness prevails or death occurs can scarcely be imagined. In one room, near the Caledonian-road, Islington, were found amidst a family, a child dead from scarlet fever, and another ill with the same complaint. No washing had been done for a fortnight, and the clothes which had been worn by the sick child, and those which had been taken off the dead one, were stowed in the bottom of a cupboard, where the food of the family was kept: there were dirty slops in the room and on the staircase; the window had never been opened since the sickness began. The woman who lived here had buried three children, and the one lying dead was the fourth lost. The remaining rooms of the house were densely crowded: the drainage was not good; and two other children had died in the same place not long before. Concerning most of our provincial towns, and I have examined many of them, similar statements have to be made and must be extended to Ireland and Scotland. The medical officer of health of Liverpool, Dr. Trench, is calling the attention of the corporation to the great want of accommodation for skilled and unskilled artisans; saying that, in spite of watchfulness on the part of the sanitary staff, the tenants of single rooms take in lodgers, to the detriment of health and comfort. He ascribes the evil to the demolition of the poorer class of dwellings in the business parts of the town, and the consequent overcrowding of those which still exist, with its natural consequence, social birds of prey. The working classes there, as elsewhere, show a strong objection to live in the suburbs, at a distance from their place of business; and it is urged that there are still localities near the business centres of the town where dwellings for the working classes could be built profitably, either by philanthropists or speculators, and which would at the same time do away with much social discomfort and misery. I could give descriptions of crowded dog-holes seen by myself in Manchester, Leeds, Sheffield, and elsewhere, that would appal the reflective. But it cannot be necessary. A few words must be said, however, touching the country districts, as it must not be imagined that this evil is confined to large towns. I have again and again found cottages with two sleeping-rooms, very small and low, containing in one a man and his wife and six or seven children, and in the other two, three, and even four lodgers in the shape of farm labourers or navvies. In Buckinghamshire, in Norfolk, in Sussex, I have found at night nine, ten, and more persons in a room not large enough for healthful occupation by one; and when to this damaging proceeding are added, as is often the case, no drainage, insufficient "closet" accommodation, and decomposing refuse scattered about the outside, no wonder need be expressed at the prevalence of fever, the dying off of the children, and a low state of morality on the part of those who survive. It is scarcely necessary to multiply instances proving the universality of this evil overcrowding. Take one more utterance, and that from the Sister Isle. It is the picture of a hovel, such as is not uncommon in the western part of Ireland, given by the medical officer of health for Sligo (Dr. Tucker). It is the home of a small farmer, the tenant of a nobleman: and is 12 ft. broad and 24 ft. long. "The domestic circle, happy family, or menagerie that dwelt therein consisted," he says, "of a sick man, his wife, four daughters, one son, three cows, one horse, two calves, two pigs, and some poultry, all in one common undivided house,—no partition." Generally the pigs were under the beds, the people in them, and the poultry overhead. The condition of the air,—the sort of *life* enjoyed by the occupants, may be imagined.

"The breath of man is fatal to his fellows;" more than that, it is fatal to himself. Man needs for healthful breathing-space at least 500 cubic feet, with constant renewal of the air. In thousands of houses occupied as I have briefly described, each sleeper has not 100 ft. of space. I have seen scores of rooms, both in town and country, where they had even less. Health under such circumstances is simply impossible. Just as certainly as the taper dwindles, and ultimately expires in a jar from which a fresh supply of air is excluded, so does the vital power of man under similar circumstances grow less and less powerful, and ultimately cease. And even where some change in the air is going on unless this be adequate the air becomes surcharged with poisonous matter, and does deadly work. It is now well known that there are certain diseases of which the very essence is filth,—diseases which take no hold except where putrefiable air or contaminated water affords means for their subsistence; and of these diseases tens of thousands die. Typhus fever, the disease of the prime of life, has its source especially in such impurity of air as is produced by overcrowding, and is a constant cause of death, misery, and pauperism. We have ague where we do not drain: we have fever where we overcrowd. The money-loss through typhus fever alone, during the last twenty years, would have to be stated in millions.

Even if death do not result, a low state of health becomes the rule. "Everybody in this country," exclaimed Lord Palmerston at Tiverton, the other day, "is alive;" and it expressed correctly what the Premier wished to convey. I say, however, speaking literally, that thousands in this country are only *half* alive, have never lived, and never either work or play with whole life. Passing the greater part of their time deprived of that without which there is no life, pure air, a low state of health becomes chronic: they exist, they do not live. An epidemic finds amongst them its ready victims. On one occasion I subjected myself to such an atmosphere for some hours, and experienced a feeling of exhaustion that was not overcome in two days afterwards. Bad air takes away appetite, depresses the spirits, lessens the vital power, and predisposes to more serious disease. A tendency is given by it to seek the temporary relief of alcoholic stimulants; while the children dwelling thus herded together lose all sense of decency, propriety, and order, and go to recruit the ranks of the dangerous classes,—the products of society's ignorance and guilty carelessness,—and pretty dearly has society to pay for its carelessness. I have ventured to say elsewhere, and see no reason to revoke it, that "it would be *cheaper* to send children thus situate to a first-class boarding-school, and put them in a way to be fairly healthy and wise, than to allow them to become, as they probably will, thieves and prostitutes. It is not even a question between prevention and cure. Educate the children downwards to convicts, and cure is very nearly impossible. If you would do anything you must prevent."*

That great change in this material condition is necessary before any attempt to elevate, morally and intellectually, the classes to which I am alluding can be to any extent successful, I have scores of independent witnesses to testify, beyond my own conviction, the result of long and earnest consideration of the subject. The vicar of Brompton, for example (Dr. Irons), writes to me what dozens of hard-worked clergymen to whom I have put the question have replied,—"It is literally *impossible* for the clergy to raise the condition of the population in these overcrowded places. They who aid in bringing about improvement in this respect are coadjutors to Christian missions. May God bless their efforts." "I ask," says the Bishop of Ripon, "if all the labour of parochial clergy and City missionaries be not thrown away upon a population so circumstanced? Does not the same state of things go on from year to year? Is there any moral improvement in the mass, so long as the physical condition is unchanged? I have put the question to men who have faithfully toiled for years in these dens of London, and the answer is invariably the same. No general impression is made."

The disastrous influences, moral and physical, of overcrowding being seen, the second question now arises, How could it be prevented? In reply, I must reiterate my conviction that the first step should be the application of the Act

* Substance of address, by Mr. Godwin, delivered at the Congress of Social Science Association, York, as elsewhere alluded to.

† See the "Transactions" for that year, p. 594.

* "Another Blow for Life." (Allen & Co.)

for regulating Common Lodging-houses to all houses let in tenements to, say, more than two families; -that each house so let should be registered, inspected, and regulated. Moreover, that this step should be taken immediately. To meet the cry against "interference with Englishmen's homes," the assertion that want of means enforces the herding together that is found, I would repeat the observation, that a man is not allowed to poison with drugs or knock on the head those who are dependent on him because he is poor, neither should he be allowed on that ground, or because it is done in a room for which he pays rent, to kill them with bad air. The spread of knowledge (and this should be aided in all ways) will do something towards lessening the evil; the removal of houses wholly unfitted for occupation by a number of families, and the provision of proper dwellings at a moderate rent will do more: but even the supply of these *desiderata*, could it be effected even more immediately than seems at all likely, would not, in my opinion, obviate the necessity for the immediate interference I have called for to protect men and women against their own acts and in defence of the rising generation and the innocent. Overcrowd a room and the infant is the first to suffer,—it pines and dies. Again, the fever generated in one of the courts of the Coram-street district finds its second crop of victims in Russell-square. Nearly 300 years ago the evil was seen, and to a certain extent fought against by the infliction of penalties; for in the reign of Queen Elizabeth a decree was issued which enacted that "no owner or occupier of any cottage shall place or willingly suffer any more families than one to cohabit therein; in pain to forfeit to the lord of the leet 10s. for every month he so continues them together."

The view which I have been urging for some years is, I am glad to say, obtaining acceptance, as I might prove by a number of letters from all parts of the kingdom; while independent observers and writers are proposing the same remedy. Thus Dr. Mapother, the medical officer of health for Dublin, after alluding to Gill's-square, Yellow-court, the passages off Pill-lane, Beresford-street, and Greek-street, some of which I know and I can testify as to their miserable condition and evil productions, says,—"The chief cause which leads to such places being inhabited at all, and their never being improved, is the system of house jobbing which exists all over the poorer parts of Dublin. They are let at low rates, though indeed the highest that can be extracted from the miserable tenants, and not one penny is ever expended in trying to make them decent habitations. I believe, however, that with the energetic efforts to carry out the provisions of the Common Lodging-house Act, and the Towns' Amendment Act just passed, to which I am of opinion (he continues) a system of licensing the proprietors of any house under a certain value let in tenements might be advantageously added, and with aid of some wealthy and benevolent citizens, who will build fit dwellings for our city poor, the lamentable condition I have so inadequately sketched will be bettered."

The *Times*, in commenting on my previous paper said,—"The Legislature has a right to interfere at least on behalf of the innocent victims of their landlords' or neighbours' negligence; and by fixing a statutable minimum of breathing-room in cases where such protection shall be proved to be most needed, may gradually enlighten public opinion on this subject." Other influential journals went even farther in support of the proposition, and at the conference on the dwellings of the labouring classes, held at the instance of the Council of the Society of Arts in May last, the meeting came to the resolution that the Legislature might procure better dwelling-places for the poorer classes by, amongst other steps, "the improvement of the Lodging-house Act, as regards provision for sanitary purposes, and giving greater power to inspecting officers."

Very large numbers of houses in the business centres of London, tenanted by the poor, and the industrious classes, have been destroyed, not only for railways, but to give place to warehouses, printing establishments, offices, and such like; and although, knowing the miserable nature of many of these places,—their total unfitness for occupation,—I cannot, as some do, deplore this removal in an unqualified manner, it must be urged as a cogent reason why efforts should be made to supply fresh homes of a better character. The call for these comes from more classes than one. A respectable journeyman tailor, for example, writes as follows, and his letter represents several others addressed to me. "I hear," he says, "of the great progress made in providing dwellings for the less affluent classes, and of the liberality of the railway companies in connexion therewith. So far so good. But, sir, allow me to speak for those who are circumstanced like myself. We are *compelled* to live in a given locality. Our employer cannot employ workmen who live out of the neighbourhood; the master-tailor *must* have his hands within a few minutes' walk of his establishment. What can be done for us but altering existing buildings, such as the Alhambra, which is in the market, the old Cosmorama, also untenanted, or the empty houses in St. Martin's-court? Pray, sir, plead for *us* to whom cheap dwellings out of town and very low fares are of no avail. I have only to add, that as the number of houses decreases in London the rents rise accordingly."

Several large structures to be let in lodgings are in progress at this time in the metropolis, at the cost of the Corporation of London, the Peabody trustees, and other bodies, and will do some little towards supplying the want, but very little as compared with the magnitude of the population to be dealt with. In the meanwhile the old houses remain unimproved, and capitalists and speculators find it pays better to erect houses for another class.

Amongst the causes that contribute more or less to this evil, is the unequal manner in which parish rates are levied in different parts of the metropolis and elsewhere. Last year, for example, we see that, while in Mile-end New Town the rating amounted to 7s. in the pound; in St. George's, Hanover-square, it was only 2s. 11¾d. There is no doubt that the heavy rates in poor districts has the effect of preventing improvement in the dwellings of the poor and industrious classes. Moreover, in places where a high levy is made, capitalists and speculators are even less disposed than elsewhere to erect such buildings as are needed, although it is in such localities they are more particularly required.

Many other points, such as the forcing of railway companies destroying dwellings to erect a certain number elsewhere; the cheapening of house-building; the improvement of existing dwellings; the desirability of laws enabling working men more easily to invest their savings in obtaining a house for themselves, occur to me for discussion; but I prefer to leave these topics to the speakers who will follow me, contenting myself with setting forth a general statement of the case, and urging the one important step, the extension of the powers of the Lodging-house Act. This, if all the other remedies were put into operation, would, I think, still be necessary to prevent the frightful loss of health and life, and the degradation of morals produced by overcrowding.

I must now hasten to a close; but, before ending this paper (written too hurriedly, under the pressure of other occupations), must refer, though briefly, to the overcrowding that prevails in workshops, schools, barracks, and ships; and urge that the protecting supervision sought for ought not to be confined to dwelling-houses.

In some barracks, both at home and in the colonies, though the condition of the soldier has been much improved since attention was first directed, about six years ago, to the neglect of sanitary arrangements in their rooms, continued fevers prevail and are mainly attributable to overcrowding, aided by imperfect drainage. The same cause on board ship often leads to dreadful mortalities, not to speak of the less damage to health which escapes observation, or is wrongly attributed to other causes.

The workrooms of milliners, artificial flower-makers, and others who employ large numbers of young women and girls, remain for the most part as they were before attention had been specially directed to them,—filled to danger-point and beyond it. At the close of the last season, I examined the workrooms of two first-class milliners and dress-makers in the neighbourhood of Regent-street, both employing more than sixty girls, and found that each worker had not 140 cubic feet of breathing-space, instead of 500 feet. In bad weather, when the windows are shut, and worse still at night, when unventilated gas-burners are flaring in every direction, the atmosphere is poison. What wonder that the faces of many of the girls were swollen and tied up; that a certain number are usually away ill; and that consumption is a not unusual result? The census of 1861 shows that there are in London, of different ages, nearly 55,000 milliners and dressmakers,—an army of martyrs needing our care. It is to be hoped that the Commission appointed in 1861 to inquire relative to the various employments of young persons throughout the country, and only now beginning to look for information concerning the places in which such persons are employed,—without knowing something of which, as they rightly say in their first circular, no sound and practical conclusions as to the means of improving their condition can be arrived at,—will make themselves fully informed as to the overcrowding of which I am speaking, with its miserable results, morally and physically; and will devise means effectually to stay it in workshops and manufactories.

To obtain a remedy for the widely-spread evil in other directions; to prevent the money-loss, the lowering of health, the moral degradation, and the destruction of life it causes, I earnestly invoke the aid of all who have power to assist.

SOCIAL SCIENCE CONGRESS IN YORK.

THE HEALTH DEPARTMENT.

The York meeting of the Social Science Association has passed off very satisfactorily, and, it may be hoped, usefully. Lord Brougham in the delivery of his address (on the evening of the 22nd ult.) was clearer in his utterance than on some previous occasions, and carried through the business of the week with unabated vigour. The Working Men's meeting on the following evening was a fine sight; the Festival Concert Room being crammed with an attentive and appreciating audience. Some excellent speeches were delivered. The experiment of setting apart days for the discussion of special subjects will probably be considered successful. On the next occasion, however, should the practice be continued, a special reporter should be provided in each department. The reporters for the public journals are forced, of course, to confine themselves to salient points. The proceedings have been fully reported from this point of view both in the London and provincial papers. We give some particulars of what took place in the Health Department, presided over by Sir Charles Hastings.

At the first meeting, the special question for discussion was,—

The Utilization of Sewage.

Mr. R. Rawlinson opened the discussion with a paper on the question "What are the best Means for disposing of the Sewage of Towns?" He said the question had excited much interest, had involved costly expenditure, and elaborate inquiries during the last ten years. If reports, blue-books, and evidence could have settled the question, it would not have been necessary to discuss it in that department; but the evidence was so widely various that an outside inquirer was fairly bewildered by the mass of contradiction offered to his notice. The disposal of town sewage had been met in some recent instances with a demand to abolish sewers and return to a "judicious use of cesspools." But those who advocated a return to cesspools had not made themselves fully acquainted with the evils involved by a retention of refuse near and within dwelling-houses until putrid fermentation set in and the most deadly forms of disease prevailed. Modern sewerage and drainage work had unquestionably fouled rivers, and there was a strong desire expressed on behalf of proprietors and populations resident on the banks of rivers to prevent such fouling by forbidding any discharge of town and house sewage into rivers. In the metropolis, works of extraordinary magnitude were in course of construction, the estimated cost of which was five millions and a half. But these works, gigantic and costly as they were, would only imperfectly intercept sewage from the river within the boundaries of the metropolis, to discharge the concentrated volume into the tidal river a few miles nearer the estuary, and where, most probably, it would be found that the brackish water and sewage would be more noxious than if continuously diluted in the fresh-water portion of the river. The history of leprosy, plague, black fever, sweaty sickness, and the modern scourges of typhus and cholera, showed that they occurred where sanitary laws had been systematically broken. When the population of England and Wales did not exceed five millions, the occasional destruction of human life in London and other cities amounted in a year to a moiety of the entire population. In 1665, the population of London was estimated

at 384,000, and the deaths by plague in September and October of that year were 8,500 a week, equal with the population of modern London to 60,000 a week, and to the destruction of a million and a half of human lives, or half the population, in a year. All the elements of plague and cholera existed in the world at this day. They had the evidence of that fact in the accounts from India, and the foul cities of the East, where plague was ever present. At this moment yellow fever was ravaging some of our West Indian Islands, and a medical commission was investigating the causes of leprosy in the British Indian possessions. Just as in Russia, Italy, Turkey, India, and China were found the types of a past civilisation still existing, so might yet be found cities without sewers or pavements, with houses without ventilation or sunlight, and where in dry weather the streets were filled with dust, and in wet weather with putrid garbage and mud. We could still investigate cause and effect in foul cities with high rates of mortality, and on the other hand in cities where sanitary improvements had been made, and where the rate of mortality had been proportionately diminished. He deprecated any return to the system of cesspools. His practical conclusions were that medical evidence and experience proved the modern system of sewering, draining, water supply, and a use of water-closets, improved the health of the inhabitants. The evidences were to be found in returns from Berwick-upon-Tweed, Alnwick, Morpeth, Penrith, Carlisle, Lancaster, Ormskirk, Preston, Wigan, Chorley, Macclesfield, North Shields, Sunderland, Ely, Worksop, Worthing, Salisbury, and many other places. Towns were purified, but streams were fouled by putrid sewage. The sewage of cesspools contained foul deposits, which, washed out by heavy falls of rain, poisoned fish. Fresh sewage, as at Berwick-upon-Tweed, Alnwick, Morpeth, Carlisle, Penrith, Buxton, and Worksop fed fish. Sewage was injurious to all rivers, from which it was necessary to abstract water for domestic uses; the admission of sewage to such rivers should be rigidly prohibited. Sewage was beneficial to agriculture where applied to the land. The available value of sewage would depend upon local contingencies which could only be estimated when all the elements were known. The chemist's test and value formed only one item in the consideration. Sewage irrigation works should be as simple and economical as possible. Gravitation and surface irrigation, as at Croydon, should be made available wherever practicable. If steam pumping power was necessary, open canal-like tanks, open carriers, and surface irrigation, should be adopted. No lift should be attempted greater than was necessary to allow the sewage to flow by simple gravity. Sewage irrigation might be carried on over the same ground for an indefinite period, as was proved by some of the land near Edinburgh, which had been regularly irrigated for upwards of two centuries. No known or tried form of precipitating sewage so as to obtain a portable solid manure had ever been made to pay in Great Britain. The utilisation, so as to purify town sewage, ought to be imperative, as at Croydon. Experiments, so far as they had been carried, indicated that comparatively large volumes of sewage (5,000 tons per annum per acre) paid better than the distribution of smaller quantities. Sewage was continuously produced, and should be as continuously utilised. This would be accomplished most easily and cheaply by having land at command a proper proportion of sand to act as a filter. Sand gravel, or a combination of sand gravel and loam, would form the best natural filters. Heavy clay lands should be avoided, excepting for moderate irrigation. Sewage was not equally rich at all times of the twenty-four hours. In sewers which regularly discharged fresh sewage, as at Carlisle, Wigan, and all towns sewered on true principles, night sewage and day sewage differed materially. At Carlisle analysis had shown that, from ten o'clock p.m. to eight a.m., discharge from the outlet sewer was almost entirely subsoil water. There was, as might be expected, an increase in volume and strength in the morning about nine o'clock; at noon; and again from six to eight o'clock p.m. In Carlisle, and Wigan, with 35,000 inhabitants each, and with some 6,000 houses drained, there was no expenditure below the surface in the sewers to remove solids. The daily flow of water was sufficient to preserve the sewers clean. Earthenware pipes, from 9 in. to 4 in. in internal diameter, made the best house-drains, and, when carefully laid, did not choke. Two or three towns might be named as examples of this use of small earthenware pipes with success, namely, Carlisle, Lancaster, Wigan, Swansea, and West Ham, near London, where several acres of land which had been built upon were from 6 ft. to 10 ft. below the high water of the river Thames adjoining. The sewering of towns on correct principles ought to be promoted, so as to insure cleanliness, comfort, and health; as such improvements were of national importance, because cleanliness, comfort, and health tended to reduce pauperism, drunkenness, lunacy, and crime. The pollution of rivers and streams ought to be prevented, because property was depreciated in value, and the waters were injuriously tainted by it. Parliamentary authority was needed to give enabling powers to deal with sewage as generated in the several river drainage areas. There must be imperative action and power of uniformity of rating over the whole area benefited.

Other papers on the same subject were read by Dr. Bird, Mr. J. Walker, and Dr. Bishop.

Lord Robt. Montague said that as he presided over the Select Committee of the House of Commons on this subject, he wished to make some remarks on the question. He observed that Mr. Rawlinson's views somewhat differed from those which he had presented to the Committee of the House of Commons. [This Mr. Rawlinson denied.] The Rugby experiments had not been properly or fairly conducted. Mr. Rawlinson had denounced many of the extensive schemes for the utilization of sewage; but the promoters of these schemes were not men who were apt to rush to ruin, but who had made careful calculations before entering upon them. He then quoted extracts from the evidence laid before the select committee to show the impure state of many of the rivers of England, and the deleterious effect they produced on the health of the people. He thought they would agree with the unanimous decision of the committee that sewage ought no longer to be thrown into rivers, and the only place where they could put it was the land. Whether it paid or not, they must utilize it in a liquid state; but he believed that if the arrangement were judiciously carried out it could be made to pay, and trusted that the people would insist on Parliament dealing with the question. He enlarged upon the great money value of the solid manure that might be obtained, and argued that its universal application to the purposes of agriculture would be an immense benefit to the country. Taxes would be reduced; sickness and disease would be diminished; we should have purer water; benefit the farmer by giving him a cheap and most fertilizing manure; and augment the wealth of the landowners from a source which would not impoverish any other class of the community. Surely those were inducements why we should carry out a complete system of utilizing sewage. It was an axiom of the late Mr. Austin, of the Board of Health, that the elements of the food we consumed were meant to be returned to the earth to be utilized again. If they were returned to the earth they would raise substances for the food of man; if they were left upon the earth they would breed pestilence and spread disease through the country.

Mr. Bracebridge, of Birmingham, offered some observations; and

Mr. Henry Roberts told Mr. Rawlinson (who had spoken very severely of the filthy state of continental cities) that an immense improvement had taken place in those cities, and that we in England must not suppose ourselves to be the only nation that had progressed on the path of sanitary reform.

Dr. Lankester spoke upon the absolute necessity for removing fever-breeding filth from the neighbourhood of dwelling-houses, and upon the applicability of liquid sewage as manure.

The discussion was continued by Mr. Newlands, borough engineer of Liverpool, and other gentlemen; and, on the motion of the Chairman, it was resolved:—

"That this meeting regards the sewage of towns as of undoubted value as a fertiliser of the soil; and while recognising the importance of getting rid of it as a source of disease from houses, is decidedly of opinion that the true destination of sewage is the soil; and, therefore, strongly recommends the continuance of all efforts to divert it from rivers, and to distribute it over the land of the country."

Saturday was appropriated to the question of

Overcrowding.

The discussion was opened with an address by Mr. Godwin, which will be found on another page.

Mr. Holmes read a paper on "The Overcrowding and Mortality of the Borough of Leeds." The facts stated in this paper showed that the rate of mortality was very rapidly increasing; that in 1861 it was 25 per 1,000; in 1862 it rose to 27; and last year the death-rate was 32 per 1,000. The board of guardians had reported that this unsatisfactory state of things was in part due to the overcrowding of dwellings; and it had been estimated that at least 2,000 houses were required in addition to those already existing. In one case it was found that a cellar contained four beds. In one was a man, his wife, and three children; in another, two men; in the third and fourth, a man and woman in each; making a total of eleven persons, in addition to two dogs. The dimensions of the cellar were 12 ft. by 11 ft., and 5½ ft. high. Another cellar contained three beds. In one were three men; in a second, a man, woman, and child; and in the third, one woman.

Dr. Markham expressed his surprise that employers of labour had not been called upon more than they had been to provide proper dwellings for those whom they employed in their business. He argued that employers required labour; those who had their labour to dispose of required houses. The Government should declare that houses of a certain description should be provided; and if they were not provided, then the labourer should not live there, and the employer would then find out that he could not get labour unless he provided an adequate supply of dwellings. It might be said that this would interfere with industry. He admitted that it would do so, and would be glad if such were the result of his proposition; for why should the working classes be compelled to live in unhealthy dwellings, in order to put money into the pockets of their employers?

Mr. Rawlinson said that as the evil was a national one, so ought also to be the remedy. The parishes of the country were now losing a great deal of money by diseases consequent upon the overcrowding of houses, and the parishes should be armed with powers to compel owners of property to provide better accommodation, or to shut up lodging-houses where proper accommodation did not exist. There were now about 500 places in the United Kingdom where the Local Government Act was in force, and under its provisions it was required that the plans of all houses about to be built should be in the first instance submitted to the local authorities, who insisted in all cases upon a certain amount of ventilation, and a proper supply of windows, chimneys, and other matters conducive to health. This Act had been found to work most beneficially.

Dr. Lankester referred to the inequality of the death-rates in various districts of the metropolis, as constituting a difficulty in the way of applying any legislative enactments to the remedy of the evil of overcrowding. Unless they could deal with property in a manner which had never yet been attempted, and compel persons to expend money in the improvement of their property, there was little hope of improving the existing state of things. As officer of health for the district of St. James's, it would not be possible for him to eject all persons out of lodging-houses beyond a certain prescribed number; and even if he were to do so one day there would be no security that on the next day the rooms would be again as much overcrowded as before.

Mr. M'Gowan said they must rely upon private benevolence as a remedy for the evil, and looked with considerable doubt upon the agency of legislation as a means of putting an end to an admitted evil.

Mr. Holmes, in reply to the suggestion that employers should find dwelling-houses for those whom they employed, stated that in some cases, and especially among the coal-owners, houses were provided for the pitmen. But it so happened that in the event of any dispute between the employers and the employed the pitmen remained in the house, and refused to pay any rent, or, on the other hand, the employers ejected the men when they were not at work for them, and this frequently led to scenes of great violence and disorder. He suggested as a remedy that the working classes should be encouraged to act for themselves in the matter, and by the aid of building societies and other agencies provide dwellings for themselves.

Mr. Godwin having replied, the department ultimately passed the following resolution, in accordance with his views, moved by the President:—

"That this meeting, rightly appreciating the fearful evils, both moral and physical, resulting from over-

crowding, are strongly impressed with the desirability of extending the operations of the Lodging-house Act to houses let to more than two families, and strongly recommend to the council of the Association the early consideration of the steps that might usefully be taken with that end in view."

Infant Mortality

was the subject of discussion on Monday, and Dr. Husband, of York, read a paper on "Its Cause and Remedy." In the outset he spoke of infant mortality as robbing the country of that which would have proved a source of wealth. He then proceeded to quote statistics from the registrar-general's returns and other sources, of the births and deaths of children in England and Wales. Of those born in 1862, 56,960 males and 44,413 females died under one year old. In the same year, 178,000 children died under five years old—both classes—from contagious diseases, constitutional defects, and violent deaths; the latter being only 1,600 odd. From fever 19,696 of these children die before reaching the age of one year; and nearly 17,000 of this number die from preventible diseases. 1,000 die from the want of breast nourishment; but in this case the returns are not satisfactory. 16,000 die from pneumonia; and one-sixth, as he had shown, from preventible diseases. Among the latter he named as causes of disease the want of proper sanitary arrangements and the want of physical stamina to resist disease. Everything, he remarked, which lowers the standard of health, which depresses the human frame, makes it a prey to disease. Among the causes of infant mortality he named the question of diet, and said that the deaths arose from the want of proper nourishment and the want of knowledge of artificial food. Milk contains all the elements necessary for the growth of the child and the maintenance of proper health; and here he mentioned incidentally that while the poor people required an additional supply of milk, there were country places where it was largely given to feed the pigs. Next to the want of proper nourishment, he named as a great cause of infant mortality, "excessive feeding," and another cause was "irregular feeding." One-fifth of the whole of the children born in England die from convulsions, and these convulsions were largely contributed to by improper food and impure air. The mistake of the poor people was, that when a child was ill they must keep it warm, regardless of pure air. No more fatal mistake could be made. Clothe the child as much as you please, but give it pure air. The greatest of all causes of infant mortality were to be found in "Dalby," "Godfrey," and all such nuisances, which were only so many excuses for improper management. Another cause of the infant mortality was the employment of mothers in other than domestic institutions. The remedy for the existing evil he then proceeded to point out. We must reform the habits of the people—give the mother her own pursuits in her own home; and above all, endeavour to raise the intelligence of the parents, and show them that, even in a pecuniary point of view, it is more profitable to keep children in health than in sickness. Where education was low, as in Lancashire, infant mortality was the greatest. His suggestions for preventing infant mortality were, the appointment of officers of public health in every district in the country, to watch over and to introduce measures for the preservation of public health, and next that Government should assist in diffusing information on this question.

Dr. Trench followed with a paper on infant diseases of Liverpool. The papers led to an interesting discussion, and a resolution was unanimously adopted to the following effect:—

"That this section, feeling that the great mortality of children under five years of age is entirely due to removable causes, is of opinion that a large amount of infant mortality is due to the ignorance of mothers of the way in which their children should be managed, and their carelessness of the welfare of their offspring; and recommends, for the purpose of checking the latter, a compulsory registration of births, and the registration before burial of all deaths in which no proper medical certificate has been obtained."

On Tuesday the business of the departments was commenced with the address of Sir Charles Hastings as president of the Health Section, in which he reviewed the subjects that had been discussed. At the close Sir Charles said,—Looking at the great advances already made, and the many efforts that we see originated around us, we may have good hope for the future. The time will assuredly come when the laws of health will be generally known and obeyed throughout the community. None of us are likely to reach that day, but we may hasten its coming for a future generation, and even now we may see it and rejoice. Already the average term of human life is increasing, year by year, in England and Wales, owing to better drainage, freer ventilation, a wider diffusion of the comforts of life, and greater moderation in the use of fermented liquors. Already the wisdom of John Wesley, that apostle of the last century, who said that cleanliness is next to godliness, has been practically accepted by the nation. Already the indissoluble connexion between physical and moral law is admitted by most thinking men. Nor is this kingdom the only part of her Majesty's dominions in which sanitary science is being studied, and hygienic improvements carried out. Even in our Indian empire, where the condition of nearly 200 millions of human beings has been too long a reproach to our rule, we can see the advent of a wise policy destined to elevate a population ignorant and abject to the benefits of Western civilisation. It must be a matter of congratulation to this Association that one of our members and one who has taken a deep interest in our proceedings, is now guiding the destinies of India. Sir John Lawrence has paid much attention to sanitary investigations; and I understand that one of the last steps he took before sailing to the scene of his viceregal labours was to obtain from the office of the Association the valuable papers of Miss Nightingale on health in India, and others bearing on the same subject. The circulation of that paper, which has just been reprinted by the council, may have much effect on the sanitary condition of the native population, as well as of Europeans resident in the East; and it is gratifying to learn that exertions have already been made to improve the health of the presidential towns of Calcutta and Bombay. More encouraging still is it to know that many of the natives are turning their attention to these questions, and that a society of native medical practitioners, having for its object, among others, the hygienic improvement of their country, has recently been formed in Bengal. England may thus be destined to spread a knowledge of sanitary science over the globe, to set an example to other peoples of obedience to the physical laws laid down by the Almighty, and, in the words of Milton's magnificent prose, "to lead the nations in the way of life." But whether England herself have the wisdom to walk in this way, and whether others follow or not therein, be assured that in the observance of these immutable principles the permanent prosperity of states is bound up. As the Scripture says, "God is not mocked," and His laws are not broken with impunity:—

"The sword of Heaven is not in haste to strike,
Nor yet doth linger."

THE MOUNTAIN HOMES OF NORTH WALES.

"As the home, so the people."

During a trip from the noisy world for a few days,

"O'er hills, through valleys, and by rivers' brink,"
(*Cowper.*)

I put on your sanitary spectacles,* and beg to send a few notes of that which came under observation, thinking that you will be interested and your readers amused.

The arrival in the little town of Llangollen, a place of resort by tourists, was most agreeable after the inconvenience experienced by the railway changes, and the offensive transit through the intolerable smoke and unromantic views of Birmingham, *alias* the "black country."

The ride of ten miles from Llangollen to Corwen, through Glyn Dyfrdwy, or the valley of the Dee (Telford's admirable road being formed at a great elevation at the side of the Berwyn range of mountains), is exceedingly picturesque, the country mountainous and varied, and only requires some continental appellation to render it fashionable.

Corwen is full of historic interest connected with the exploits of Owen Glyndwr, at whose birth the "heavens were all on fire, the earth did tremble," and "the goats ran from the mountains."† The goats have certainly disappeared, and pigs now extensively flourish in their place. Drains are laid in Corwen, leading to the Dee, and some forty improved cottages have been built by Mr. Lewis, postmaster; but still there is much to complain of,—one closet only to six cottages continues. The rent of the cottages varies, at 2*l.*, 4*l.*, and 5*l.* per annum; a shop, with kitchen, two bed-rooms, &c., 8*l.* per annum. The rent of land is from 1*l.* 10*s.* to 3*l.* per acre; in the meadows 4*l.* per acre.

The "Hand-Book of English Ecclesiology," in alluding to the churches of North Wales, correctly describes them as being of a very mean description, mainly to be attributed to the poverty and scanty population of the district,—with little or nothing of distinct architectural character,—features coarse and rude, apparently of late date,—little work earlier than Perpendicular,—extremely small,—no marked division of chancel or aisles,—and resembling barns or cottages rather than churches. This picture is mainly true; there are, however, some noticeable features which will gratify the architectural student.

Corwen Church is Early English, with chancel, transepts, nave, tower, and north porch. Internal length, 105 ft. 9½ in.; width, 18 ft. 9 in.; across transepts, 64 ft. 3 in.; tower, 11 ft. 5 in. square. Some Perpendicular windows have been inserted, and some modern windows of no character. The church requires to be properly restored (not pulled down as suggested); the painted Roman altar-piece, with its balusters, vases, curtains, &c., cleared away; and the deeply-splayed Early English triplet, now built up, re-opened and filled with suitable painted and stained glass; the flat eighteenth-century plastered ceiling removed, and the fine oak-timbered roof opened and restored. The pulpit stands at the north-east angle of the chancel by the transept, consequently the congregation face the cardinal points; the pews in the chancel (which latter is 40 ft. long) should be removed, and the chancel devoted to its proper uses. The font is of the date of the church, upon a modern base; the lid bears date 1704; it is flat, with a handle like a copper-lid.

The ancient cross in the church-yard is well known; also the legend connected with the large upright stone built in the east wall of the porch. Owen Glyndwr always entered the church by the north door of the tower.

At Llangwin, some few miles west of Corwen, the church has been altered and repaired. It is a Perpendicular church, 69 ft. 9 in. long,* by 17 ft. 10 in. wide, inside measurement, without any marked division of chancel or nave. The present font is a basin similar to a bracket, fixed in south wall, no water drain. The ancient font was octagonal, 2 ft. 7 in. in diameter, large enough for total immersion, with drain complete. It has been turned out of the church, and now stands on the side of a hill on Pont-y-Glyn, or bridge of the glen, properly Pont-y-Glyn Diffwys, used as a horse-trough! The basin of the font is perfect, and ought to be at once (prior to its being injured) removed to the church, and placed upon a suitable base.

In this church at Llangwin are many metal memorial plates, formerly attached to the walls. Five of these are now lying rusty and broken in a carved oak chest (lid off), bearing date 1675,—two of these are in memory of vicars (the only memento of them), the Rev. Robert Morris, 1790, and the Rev. Edward Richards, 1814. One memorial plate has a tin socket let in, with a tallow candle,—fixed to a scaffold-pole under the west gallery to light the church! One inscription has just been put on a metal shield, affixed upside down.

Some senseless person has cut in large letters on the seat of one or more benches "R. W. Esq.!" I remonstrated with an official, and said that it ought to be erased,—the reply was, "Oh! indeed! he was the greatest man of the parish."

The inscriptions on the monuments and memorials are nearly all in English.

A similar church, and perhaps by the same architect, but not much modernized, is that of Bettws Gwerfylgoch. It is Perpendicular, and internally 53 ft. 2 in. by 18 ft.; open roof, rude and homely, with quatrefoils in the interstices. In the position usually occupied by the decalogue (beneath the east window) is placed a very curious oak carving of our Saviour, with symbols of the Crucifixion, in five compartments, in a frame. The rector (Rev. W. Hughes) informs me that it has been in the church from time immemorial, until 1854, when it was restored to its present state by the Rev. Mr. Barnack, headmaster of Ruthin Grammar School.

There is a flap attached to the altar-rails, for depositing money at funerals.

* *Id. est.*—"London Shadows," "Town Swamps and Social Bridges," "Another Blow for Life," &c., directed me how to observe the state of the humble population.—W. P. G.

† Shakspeare, "King Henry IV."

* Originally not so long.

There are three Dissenting chapels,—mere rooms.

The village of Bettws Gwerfylgoch is situate in a valley by the river Dee; west of the churchyard are cottages in a passage 12 ft. wide, with cows, pigs, and dung on the other side. The smell from the pigs is most offensive. The poor people are in delicate health; one woman has a chronic affection of the chest, and her daughter is in a decline. There is only one closet for all the people in the village! Surely there cannot be any necessity in the country to pack human beings and pigs together. The small farmers and poor people seem to have adopted the pig as a neighbour and friend,—its habitation usually forms a wing to the cottage throughout Wales.

The cottages have about two rooms in each, the rent being 2*l.* 10s. per annum; no taxes. Formerly the rent was 1*l.* 10s. The land varies in value, the rent being 5s. to 1*l.* per acre per annum.

It would be unfair to pass any opinion upon the general health of the farmers and labouring classes in Wales, without a visit to all the villages; nevertheless, I heard of four children dying at one time from diphtheria (buried in two coffins), a poor woman losing her husband by typhus fever, and other cases.

In the different churches I visited, it surprised me to find how many persons died at an early age.

The farms are small, and scattered over the country; the churches and villages are placed mostly in the valleys. The cottages are clean, and the people poor and very industrious. The rafters and joists are not lathed and plastered, but whitewashed. The walls of small cottages are 2 ft. thick, formed of irregular masses of stone, and wedged together with but little mortar. The doors are sometimes 5 ft. 6 in. high; there are few windows, and those are about 2 ft. square, in two divisions, with lead-lights. The roofs are covered with coarse slate, sometimes with thatch; the floors are paved with blue stone.

There are neither sewers nor drains, and many old cottages have no "closets." The occupiers go into the fields, and the soil, with that of the cattle and pigs, flushed by the rain, descends the hills and passes into some of the wells and springs. At many of the inns are open closets and no cesspools or water. There can be no excuse for these offensive proceedings, as enough rain falls on the mountains and hills (if properly collected), to flush all the closets in Wales.

The lanes or passes to the hills and mountains are rugged and rough, their base being principally the natural rock, forming a good foothold.

The small farmers and labouring population are as uncultivated as the hills,—"as the homes, so the people." Some farms continue to have the black bread, made with pure barley; it is preferred by the labourers, being more "satisfying." Milk is given to the labouring class during the year, and in return the wives give one or two days' work in the time of harvest. In the cottages they have but little fresh meat—only once a week, and that on Sunday. They put their forks into the potatoes, and their knives into the salt. The prints on the walls are of a good religious cast, very primitive, and many years behind those to be seen in the rural districts in England. The men work from six o'clock a.m. to eight o'clock p.m., and have 10d. per day (meals included); in harvest time, 1s. to 1s. 3d. per day—to keep a wife and often six children. Female servants have only from 4*l.* to 5*l.* per annum. With all these disadvantages they are more clean and respectable than many of the working classes in large cities who receive wages of treble the amount.

Intemperance injures many a farmer's home: a visit to Wales of a few of Father Mathews's disciples would undoubtedly benefit the population.

The harvest moon in Wales is in September, the corn being not yet gathered. The moonlight on the hills and mountains was very beautiful. A perfect rainbow on the hills was also interesting. The grand views are greatly marred by the wholesale system of whitewashing the houses and cottages, which scatter white patches over the hills and valleys. The natural colour of the stone would be far better, and present a more harmonious effect.

Stone, ready at hand, is often used instead of wood. The field-gates are hung to a slab of stone, set upright, with hook-and-eye hinges, the hook being let through the stone with nut and screw, and a piece of wood between the stone and nut. The stones are covered with moss and lichens, and present a Druidical appearance.

The people believe in ghosts. There are two kinds of ghosts in Wales,—1. Shadows cast on hill and dale from moving clouds,—"come like shadows, so depart;" 2. Ghosts of the imagination,—of these many. The people pertinaciously adhere to their fancies in the face of all arguments, and maintain that some of the clergy believe in ghosts. This I can easily imagine, after the active part they took in "clairvoyance," until the philosophy of Professor Faraday *turned the tables upon them*, and pointed out their error.

The inhabitants require to be educated, and a *good example set them*,—not frightened. If the former had been looked to fifty years ago, the very numerous Dissenting chapels, or rooms, now to be found, would not have existed.

It has been remarked that "God made the country, and man made the town." The good and hospitable people of Wales should bear in mind that the tourist is not indebted to them for the romantic beauty of their country. The houses and cottages, however, the landlords are responsible for; and it is to be hoped that they will use their best endeavours to improve the dwellings of the rural population, and render them decent and comfortable, fit for habitation and inspection, and not as they are now, as rough and as rugged as the mountains.

W. P. Griffith.

BATH FREESTONE.*

The paper which I have the honour to lay before you has reference to two subjects, both of equal local interest,—the one in an economical and commercial point of view, and the other bearing upon the scientific conditions, both as regards the mode of working and geological position of those beds in the great or Bath oolite, which may be called the "quarry-stone," and which are so extensively worked in the Bath district. I purpose, therefore, to divide my paper into two sections, or arrange the materials into a short and yet, I hope, sufficiently detailed manner, under two heads: first, to determine the true horizon or geological position of the workable beds of this valuable freestone in the series termed the great oolite; secondly, to enter upon the mode of "working and getting" this extensively-used and valuable building stone.

Geological Position.—Nowhere, I believe, in Great Britain (indeed, in Europe) are the lower members of the Jurassic group of rocks so extensively developed as in the Bath district, where each group seems to have attained its fullest recognised development: nowhere can the whole Jurassic series be so readily studied; nowhere so easily understood; and this applies to the lias itself in its three divisions. The Fullers' earth (here extensively employed), and the member of the Lower Oolitic under consideration, viz., the Bath, or Great Oolite, is distinguished here for its economical value, and at Minchinhampton and other places for its fine and typical organic remains. Above this series, but intimately associated with it, the forest marble and cornbrash are highly and typically developed; succeeded by the Oxfordian and Kimmeridge groups; not omitting even the Portlandian, at Swindon, and the Purbecks of the Vale of Wardour. To each of these may be appended important notes bearing upon their high importance, economically considered, and which are extensively developed in the district; but I purpose drawing the attention of the members of this section to the Bath oolite only, determining the position of that zone from which the freestone is extracted, and on which the wealth and comfort of the population of this neighbourhood, engaged in quarrying operations, so much depend. I have also endeavoured to fix, by detailed and measured sections, the workable beds of the district; and to correlate them over a considerable area, useful, it is hoped, both to the man of business and the geologist. These sections, which I may here refer to, are all coloured the same in their respective zones; show the importance of carefully determining the place or position of the workable beds, prior to any outlay of capital; and however difficult, indeed impossible, it may be to diagnose the quality of the freestone beds in depth, there can be no doubt as to their position and probable condition; and, when it is known that uniformity of condition over any large area is of extreme uncertainty, and knowing as we do that the thinning out of the marketable beds of freestone in this district, like the great oolite *en masse* on the line of deposition and dip, is a fact now well understood, it becomes a matter of high importance to the capitalist to be assured and confirmed as to the chances of success in opening out or developing a new district. The natural grouping of the beds constituting the great oolite series in this district fall under three well-marked divisions, all well exhibited in the sections exposed at Murhill, Westwood, and Farleydown, Combe and Hampton Downs, Box and Corsham workings, &c., &c. Indeed, generally, where conditions have exposed them, and reading downwards from the surface, we meet with, over the Bath area, immediately below the forest marble (where present), the following groupings:—1. The Upper Ragstones; 2. The Fine Freestones or Building Bed; 3. The Lower Ragstones. These constitute a series from 60 to 120 ft. in thickness, depending upon local circumstances and conditions during deposition, and, perhaps, subsequent denudation.

The Upper Ragstones.—This series consists of (in the upper part) coarse, shelly, and irregularly bedded limestones, with usually a few underlying beds of white, fine-grained limestones, possessing a distinctly and well-defined oolitic structure and finely comminuted shells. These are again succeeded by tough argillaceous beds of limestone, usually pale brown in colour, and smooth in texture, the whole ranging in thickness from 25 ft. to about 50 ft. No beds of workable value occur in this upper series.

The Fine Freestone, or Building Beds, in the Bath Stone Series. Succeeding the upper ragstone are the Bath freestone, or fine-grained building beds, which vary in the number and thickness of the various beds comprising the series, and also economically distinguished from each other by their structural condition, the size and structure of the oolitic grains, the presence or absence of silicious particles or finely-divided shelly matters; each of which may materially affect the limestone during the process of working, or influence them after being placed in position, and subject to weathering under atmospheric changes. In some localities the beds assume an earthy structure, indistinct in texture, smooth, and close-grained, and hold more moisture.

The Lower Ragstone.—Below the fine building beds, or freestone series, are the lower ragstones, which appear to be persistent everywhere over the entire area, and resting upon the Fuller's earth. They consist of numerous and generally well-defined beds of a coarse shelly texture, and hard crystalline limestone, exhibiting much false bedding, especially near the base. Many species of mollusca occur in the bottom beds, such as *Ostrea acuminata*, *Terebratula*, *Ornithocephala*, *Rhynchonella*, *Trikitis*, *Concinna*, and *Tancredia*. These lower ragstones, as before mentioned, rest immediately upon the Fuller's earth; but this member of the oolitic series concerns us only by position, and is in this district west of Corsham and Bradford, a most persistent and important zone, between the inferior oolite beds below and the lower ragstones of the great oolite above, and, in some places, very fossiliferous, and varies in thickness from 150 ft. to 200 ft. Taking, therefore, as our guide in this district, the above three divisions of the great oolite, we are enabled to construct vertical sections to aid us in our determinations as to the position and condition of the few feet of stone profitable to work in the series, or the "freestone beds,"—at all times an anxious and important question when seeking for and developing new ground. In this paper I deal chiefly with facts, and therefore give detailed and measured sections of type localities, from which may be determined by comparison the probable conditions under which the beds may occur at intermediate and unexplored stations or localities on the tablelands behind such outstanding mural precipices as Farley, Murhill, Box, on the eastern side of the Bradford and Slaughterford valleys; or on the elevated downs at Claverton, Combe, Hampton, Freshford, &c., to the south of Bath, and west of the Bradford Valley, and on the receding flats to the east of Monklow, Farleigh, and Bradford, &c., conspicuous for the numerous quarries opened in the cornbrash and forest marble, the latter of which occurs in detached patches or continuous lines, stretching from Malmesbury on the north, to Chippenham, Bradford, and other localities, to the east of Bath, and especially conspicuous near Corsham, Chapel

* By Mr. J. Randall. Read at the Bath Meeting of the British Association for Science.

Korap, South Wraxall, and on to Melksham. The most complete section, and which may be regarded as a typical one of the great oolite and forest marble beds of the Bath district, is that of the Box-hill and Corsham Quarry workings; No. 1 showing those beds not usually seen or exposed, but which were cut through by the construction of the Box Tunnel, and which we are now extensively working in that neighbourhood. Another exposition of the series is shown at Murhill, on the eastern side of the Bradford Valley, where the three divisions into which the series group themselves may be studied *in situ*. Also at Upper Westwood, on the opposite or west side of the valley, other sections occur tending to show the same facts; and the variable condition and thinning out of the same beds upon the line of Diss, even at this short distance. Believing, therefore, that I shall convey more information by giving detailed sections, showing the divisions of the three series, with special references to the building freestones, I have endeavoured to lay before this assembly somewhat detailed measured sections of the more important localities where the beds of the three series are exposed, and at such distances as will show the attenuation of the fine building stones to the south-east, and will tend to show how much the irregularly bedded and coarse shelly limestones in the upper and lower ragstones vary in different localities, thereby leading us to thoroughly acquaint ourselves with those necessary details which it is most desirable should be understood before large operations are commenced or capital sunk.

The Sections.—The shafts which are constructed along the line of the Box Tunnel, on the Great Western Railway, afford at the several points where they are carried through the beds of the great oolite, accurate data for the construction of sections and clear evidence of the succession of the strata, comprising the three divisions, I have endeavoured to maintain, as occurring throughout this district, and being situate considerably to the eastward of the Bath Valley escarpments, a large area, or the productiveness of that area is estimated by the lie position and condition of the building freestones, supposed to occupy the summit of the table-land, stretching from the eastern escarpment of the Bradford, Box, and Slaughterford valleys to Yatton, Kenuell, Biddestone, and Corsham. The section No. 1 gives accurate measurement and sufficient details to enable a practical observer to determine the series of beds at almost any point over the area above indicated, or even between the westerly extension of the Oxford Clay Line, from Malmsbury to Corsham and Melksham, and the valley escarpments before mentioned. It is not necessary to notice the forest marble, or cornbrash, which is foreign to my paper, and which, although usually present, may or may not occur on any special area above the great oolite proper, local conditions, during depositions or subsequent denudations, having removed one or the other, or both; but everywhere, so far as I know, over the whole table-land do we find the coarse shelly limestones, and some finely-grained oolite beds belonging to the upper ragstones or highest members of the great oolite. In the typical section No. 1, taken at No. 7 shaft, Box Tunnel; also at the shafts 4, 5, 6, these beds occur, and were cut through when sinking, and were found to be from 20 ft. to 35 ft. in thickness, before proving the "capping" to the building or "fine beds" below. At Murhill, near Winsley, these upper ragstone-beds are about 20 ft. in thickness, and are hard, coarse, and fine shelly limestones, highly comminuted in structure, and occasionally oolitic. In some of the localities, many of the beds are of considerable thickness, and of regular and even texture; still they are too hard for those purposes for which the softer fine-grained, whiter, and more easily-worked architectural stones below (in the second series) are sought for, and to which they are applied; and, again, they are not good weather stones, but rapidly fall to decay on exposure to severe changes of weather. At Upper Westwood, on the south side of the Bradford Valley, opposite Winsley and Murhill, the beds comprising this upper series are thicker and of more even texture, but, as weather stones, are of little or no value. At Farley Down (Section 3), overhanging Bathford, this upper series is nearly 30 ft. in thickness, composed of coarse shelly limestones at the top, with hard and soft ragstones down to the capping of the fine "building beds" below. At Combe Down and Odd Down the beds closely resemble those of Farley and Box, and approximate in thickness. Thus we may examine detailed sections of this upper series at Murhill, Farley, Westwood, Combe, and Odd Down, and the Box district generally; but the beds at neither locality are deemed of sufficient value to work for transit as a building stone. This series is coloured grey in the sections Nos. 1, 3, 4, 5, 6.

The Second or Middle Series.—Succeeding the ragstones above mentioned, and commencing the second series, there appears to be everywhere a peculiar bed extending over a large area, termed the "cover," or capping, varying in thickness, but generally hard in texture: this forms the roof, or ceiling, to the fine economical building freestones below, and over which it lies, and is a marked feature in extensive underground workings, both for its horizontal extent, application, and importance as protection to the workmen, and as commencing the second series, or middle beds, which occur between the "upper and lower ragstones." At Bradford, Westwood, and Murhill, this bed is a coarse, shelly, hard limestone; at Corsham and Box a closer grained and tough rock. I associate it with the building freestone, or fine beds below it, rather than with the ragstone above, from its persistency and the constancy of its conditions. Succeeding this is the true Bath stone, or fine freestones, and which I believe occupy, with minor differences, the same position or horizon over the whole of the Bath district. This second, middle, or freestone series, are as a group from 20 ft. to 30 ft. in thickness, and are coloured chrome-yellow in all sections, and those beds worked for transit are usually evenly grained in texture, regularly bedded, yield well to the saw, are non-fossiliferous, and give evident proof of having been accumulated or deposited in a somewhat deep and tranquil sea, or away from any littoral or wave disturbance, and which the almost total absence of organic remains still further tends to confirm or demonstrate. It appears from observation, and the correlation of measured sections, and conditions observable underground, that these fine-grained regular beds thin away in a south-easterly direction, or upon the line of their general dip, a fact clearly determinable on examining the sections exposed in the valleys. Indeed, it cannot be doubted but that the great or Bath oolite as a group, in this neighbourhood, exists under extremely irregular conditions, and dies out and disappears in the form of a lenticular or wedge-shaped mass, to the east and south-east. This circumstance, causing the building freestones to thus vary in their relative thickness as we proceed from the western part of the area to the east and south-east, and the removing of much of the exposed belt comprising the oolitic series between Bath and Bradford, on the line of their strike, north-east and south-west, caused, it would appear, by the extreme denudation of the Bath and Bradford valleys, and the westerly extension of the cretaceous series from Melksham to Westbury, Frome, and Warminster, are due, perhaps, to physical conditions connected with the eastward extension of the Mendip axis, and the little understood, deeply-seated, but undoubted position of the palæozoic series, between Frome on the south, and Bath and Wickwar on the north, or along the eastern edge of the Bristol coalfield; but under any circumstances the extension or invasion of the cretaceous series to the east, the narrowing of the exposed oolitic series above mentioned, and the mechanical arrangement of the rock structures themselves, evince and determine local deposition to have gone on under continued oscillation of the land at the time of the deposition of the great oolite series. It is to this second grouping, therefore, or the middle series, which exist between the upper and lower ragstones, that we must assign the workable beds of freestone now extensively quarried in the Bath district.

The Lower Ragstones.—These are an extensive series of rather fine and hard, as well as coarse and shelly, limestones. The lowest beds of this series, are usually finer in texture than the upper, and when exposed, are generally from 30 to 40 ft. in thickness. Nowhere in this neighbourhood are finer sections to be seen than at Murhill, on the north side of the Bradford Valley, and Upper Westwood, on the south side. The beds comprising this division usually occur, or are exposed in the escarpments of the denuded valleys, or the projecting downs above. Masses of the thicker and fine-grain beds, frequently occur on the inclined slopes of the valleys, owing to, or arising from, frequent slips or slides over the fullers' earth upon which these lower ragstones immediately rest. It is, therefore, in the narrowing of the valleys and abrupt cliffs that this series of the great oolite are best exposed. The chief economical value of these beds is confined to local purposes, being utterly unfit for architectural work, or exposure to atmospheric influences. The stone used in the construction of the aqueduct conveying the canal over the river Avon, at Avon Cliff, came from the beds of this series at the Westwood Quarry, and although *in situ* the stone appears of a fine texture and quality, yet it rapidly decomposes on exposure, and the stonework of the Avon Cliff aqueduct is a perishing evidence of its non-durability. At the Box and Corsham quarries these lower beds, though not observable at the surface, are, nevertheless, 43 ft. in thickness, and are chiefly composed of fine textured oolitic limestones; but are not worked, as they are of no value in a commercial point of view.

On the Mode of Working the Bath Freestones.—Having endeavoured to determine the horizon of the workable beds of oolite, and the relations they *hold* to the ragstones, or shelly series, recognised *above* and *below* these freestones, with the permission of this section of the British Association, I will endeavour to describe shortly the mode of opening, working, and extracting the rock,—a matter you will see to be of no little importance when I inform you that more than 100,000 tons of the Bath freestone are annually removed from their original position in this neighbourhood, and forwarded to various parts of the United Kingdom. In working for stone, the first question to determine is, whether the stone shall be reached by open or underground workings; and this must depend upon the presence and conditions of the upper ragstones (*and forest marbles*, where they exist), as they must of necessity be passed through, unless the stone can be reached by tunnelling on the face of an escarpment where the beds are vertically exposed, or by driving a level to cut the beds; but, if the desired beds are not too much covered, open workings are resorted to. Few persons travelling from London to the West of England, *viâ* the Great Western Railway, through the Box tunnel, have any conception, on passing through it, that around and over them are large and extensively-worked mines, from which the well-known Corsham and Box freestones are taken; or, as they shoot from the tunnel-mouth into the Bath-hampton, Bath-easton, and Bradford valleys, that it is the seat of so much quarry industry, having for its object the working of the Bath freestone. In describing the particular mode of getting the stone, I will, with your permission, take for my type the Corsham Down and Box Hill workings. I do so, because these mines have had more thought and attention bestowed on them than any others in this neighbourhood, and because they are the most extensively developed. It is believed that the Box and Corsham locality has been worked for stone, with more or less activity, for three centuries, but it was not demonstrated that so large an amount of good workable freestone existed in the district until the fact was evidenced by the cutting of the Box tunnel, which at once exposed the beds, and showed that to the north and north-west of the tunnel on the strike of the beds, there existed what we may practically call an inexhaustible supply of valuable freestone. The cutting of the Box tunnel having opened to view this fact, gave an impulse to the previously limited mining operations of the district. The plans and maps I have the pleasure of placing before you will illustrate the position of the workings. You will see the chief operations are situate on the north side of the tunnel: the reason of this is that the rock is found sounder in this direction, and the stone more even in colour, and more regular in quality and texture, than to the south or dip of the stone. The entrance to these workings is driven from the Corsham or eastern end, immediately contiguous to the mouth of the Box tunnel; and it is here that the railways of the underground workings join the Great Western railway on the same level. The chief or main road through the workings is carried from this point due west, in a direct line towards the Box-hill escarpment, a distance of 1 mile and 6-8ths, rising with the strata, for the purpose of keeping on the floor of the workable beds; thus making an incline to the west of about 1 in 40; and as the rise to the north is about 1 in 60, advantage has been taken of this, and the works so laid out, that much of the stone can be run on trollies without draught power, that is to say, by gravitation, to the loading platform, where it is transferred from the quarry trollies into the railway

trucks, which are taken into the mine to receive it: to economise and facilitate the operation of loading, this platform stands on a level a few inches higher than the sides of the railway truck, into which the stone has to be loaded, and by the upper level narrow gauge tramways this platform is placed in direct connexion with the whole of the headings or workings; and by its lower level broad gauge railway it is connected with the Great Western Railway. By this loading arrangement, we are enabled to load off into railway trucks from thirty to forty tons in the hour. One uniform system of getting or working the stone prevails throughout the quarries, and this system is an inversion of the mode of working coal. The coal miner undercuts his coal, that the mass may fall and break; but building-stone so worked would make a valueless rubbish-heap. The freestone miner or quarryman has to commence his operations at the roof of the stone. This picking operation is effected by means of adze-shaped picks, on the heads of which longer handles are inserted, as the work proceeds, and the men thus make their driving a distance of six or seven feet back into the rock. The width or span of these stalls must of course depend on the soundness of the rock. In the Corsham workings they can, without danger, be driven a width of from 25 ft. to 35 ft. In the Box quarries, where the rock is not so sound, and the capping bed, before referred to, not so regular, the drivings are limited to from 12 ft. to 20 ft. This is, of course, regulated by the space that may be safely opened without danger to the working beneath. It must be evident to you, that the removal of eight or nine inches of the rock immediately under the ceiling deprives the overlaying strata of the support of this area of stone as effectually as its removal throughout, from roof to floor, would do, and any tendency to settle or drop is at once determined, and any risk of life thus guarded against. Another process, by a fresh agency, is now called into exercise, for the cutting of the rock into blocks of required dimensions; for this, a one-handled saw is used. These saws are worked in lengths of four, five, six, and seven feet, and are made broad, rather, I should say, deep, at the head or extreme point, so as to ensure the saw sinking to its work at that point. The saw is worked in first horizontally dropping a little as the cut goes on, and after the rock is thus opened down to the next natural parting, and the block thus separated laterally from the parent rock, levers are introduced into the bed or parting at the bottom of the block, and these levers are weighted and shaken till the block is forcibly detached at the back. It is then drawn down by crane power, and the broken end and the bed dressed with the axe, so as to make the block shapely; it is then placed on a trolly, and allowed to run to the loading platform. After the first block is removed, it will be evident to you that the workmen have then access by that opening to the back of the bank of stone, and they avail themselves of this to work the saw transversely, which, separating the block from its back or hinder attachment, renders all further breaking off unnecessary, so the first block of each face is the only stone broken from the rock. To each face or heading of work, a 10-ton crane is erected in such position as to command the whole face. These cranes are now constructed telescopically, so as to accommodate them to slight variations in the headings, arising from differences in the depths of the valuable beds, and the expense otherwise attendant on frequent alterations of the crane is thus avoided, and the periodical shifts from old worked out to new localities are effected with less trouble and loss of time. Sometimes after a block of freestone has been loosened *in situ*, a Lewis bolt is let into the face of the block, the chain of the crane attached to it, and the block is then drawn out horizontally. By the removal of the first stratum a sufficient space is obtained to allow the workmen an entrance under the roof; and vertical cuts are again carried down through the next bed to the parting below, and transverse cuts readily made. Meanwhile, the cutting is continued in the picking bed, the upper layer removed as before, and everything below this point quarried away, with all the sides of the block sawn, except the bed on which it has rested, and those abutting on the natural joints: hence each block comes out ready to pass into the hands of the builder, sculptor, or dealer, and this with much less cost, and less loss in waste, than formerly attended blasting, and other powerful but rough modes of extraction. The continued repetition of these several operations produces a terrace or step-like profile in the workings, extending from the highest to the lowest of the beds worked on, and thus they present themselves to the view.

Professor Ansted said the Bath stone, when it was carried for building purposes to a distance, was exposed to rapid destruction by the action of the atmosphere. He attributed this to the manner in which the stone was quarried. It had been observed that this did not occur with the stone that was used in the immediate neighbourhood of Bath. This, no doubt, was attributable to the fact that the stone was not taken away from its own atmosphere. He would suggest, therefore, to the quarry-owners, that all the stone to be sent to a distance should be exposed to its own atmosphere for some considerable time, until it had become seasoned, as it were. He believed that if this were done, the stone would be as durable everywhere as it was in the immediate neighbourhood of Bath.

ICELANDIC CHURCH-BUILDING IN THE TWELFTH CENTURY.

A CORRESPONDENT writes, — The accompanying accounts of Icelandic church-building in the twelfth century are translated (almost literally) from the original, and are extracts from two Sagas, to which I have given the references in notes.

The great trees which Bishop Kloeng had hewn in Norway for the church which he caused to be built at Skalaholt were brought out in two ships. That church was elaborately made far beyond any other house that was made in Iceland, both in wood and workmanship. . . . He (the bishop) began church-building when he had been one winter at his seat. . . . These were the head artificers at the church of Skalaholt. Auni, who was called the architect, and Bjorn, the skilful, Thorvald's son: Illugi, Leif's son, carved and finished. . . . And when the church at Skalaholt was finished, so that the Bishop thought it was ready for consecration, he made a great and splendid feast to his friends, and invited thither Bjorn, the bishop, and Nicholas, the abbot, and many chiefs; and there was the greatest crowd of guests. Both Kloeng and Bjorn consecrated the church at Skalaholt, -one without and one within, and both dedicated it to Peter the Apostle. . . . That was on the day of Vitus the Martyr.* And after service Bishop Kloeng invited all those men who had been at the consecration to have breakfast there; . . . not fewer than 700 men had breakfast there, . . . but the feast was very splendid, as all men thought that were thither invited; and all the men of distinction were dismissed with great gifts. Bishop Kloeng caused the church which he had had built at Skalaholt to be adorned, when it was all completed, as much as was in his power. He had gold ornaments made, and gems set, and gave them to the church: he also caused the service-books to be written much better than they were before. This was all his study at that time, to teach young priests both the Scripture and the singing of the Psalter, and all such discourse as was needful. More self-denying was he in many things than other bishops had been, in watchings, and fastings, and clothing: he went often barefooted at night, in snows and frosts.†

Paul, the bishop, saw at once, when he came to his seat at Skalaholt, that it was due to him to maintain, and confirm, and finish that concerning which the Holy Bishop Thorlak had shown his zeal. He caused sufficient to be bought to inclose the bells, which he had bought for the see at Skalaholt, that were the best in all Iceland; and he had also brought out four trees with the bells, 20 ells high. Then Bishop Paul sent for that man who was most skilful in all Iceland at carpentry, hight Ammudi Arnason, and had a steeple made, so much elaborated in material and workmanship that it did not less surpass all other works of carpentry in Iceland than the church itself had done before. He had a chapel made, up in the steeple, and steps to go up; and he consecrated that chapel to the holy Bishop Thorlak, the tenth day of Yule, and made that chapel fair in all things, and brought there everything that was needed. He made Atli, the priest, the scribe, paint all the roof inside the steeple, and also the woodwork, and cover all the lower part with three tabernacles, well and fairly; and he caused to be written their several records over the graves of all those who rested beneath the steeple. He did not give less money to the steeple maker . . . than four hundred. He bought those bells for the steeple, that were the most perfect of their size, from that Norse man who was named Kol. He bought yet more bells for the steeple, and also two of the same circumference above in the church, and he adorned in every way that he could think of both church and steeple, with all kinds of splendour, with paintings and crosses, images and lamps, and glass windows, and all sorts of bishops' vestments. He caused also a splendid sarcophagus to be skilfully hewn, in which he was laid after his death; and he let graves be made honourably in the steeple for those men that he thought most worthy.*

* 15th June.

† Bishop Kloeng died A.D. 1176. He was bishop twenty-four years, and was ordained 6th of April, 1152, on the first Sunday after Easter.—*Biskupa-sögur*, 17, 18 (*Bishops' Sagas*).

* Páls' Saga, 6. This bishop died 29th of November, A.D. 1211.—(*Biskupa Sögur.*)

THE BRISTOL SOCIETY OF ARCHITECTS, AND BUILDERS.

At the last meeting of the council of this society, the following resolution was moved by the secretary, who read numerous letters he had received from members who could not attend, acquiescing in it: -

"That this society, having understood that it is the practice of many builders in Bristol, Bath, and adjoining towns, to prepare plans and give estimates to their employers thereupon, to the prejudice of properly qualified practitioners, and the respectable class of builders, thinks it necessary, in order to stop such mischievous practices, to discountenance such builders, and will consider it derogatory to the professional character of any of its members who, after the name of any such builder shall have been had before the council, employs or allows to be employed such builder upon their works."

The resolution was unanimously agreed to.

THE FLOWER-POTS DANGER.

THE practice of flower and plant growing on the window-sills and balconies of houses is increasing in favour, both amongst the middle and poorer classes, and is carried on at various heights from the underground parts to the third, fourth, and fifth stories. The practice is to be commended, but some care is needed in the matter. During high winds, and even at other times, many a hair-breadth escape has been endured by passengers, and numerous serious accidents have taken place. Of late, as the natural consequence of increase in the pots, accidents have been more numerous; and it is likely, unless care be taken, that during the October gales we may hear of more mishaps.

At present, in nine cases out of ten, the pots containing the plants are placed without any fastening on the window-sills, which slope towards the street. In thoroughfares where there is busy traffic, the passage of fast-running heavy waggons and other carriages, or the running of railways, by shaking the walls, often causes the flower-pots to shuffle off. But when a wind arises, especially if there be plants of any size in the pots, they are at times blown down by wholesale: at others, they are pushed down by children, with risk to the heads of the wayfarers. A simple piece of wooden framework, about the height of the flower-pots, or some slight iron bar work, or even two or three lines of strong cord, would be the means of preventing most of these accidents.

For those able to afford them, iron baskets of various designs (some of them very bad, by the way), prepared for windows, are now obtainable. A number were exhibited at one of the recent shows in the Horticultural Society's Gardens.

DISCOVERY OF A STATUE AT TURIN. — The Paris correspondent of the *Globe* writes:—"An important artistic discovery has occurred at Turin. A highly-finished antique statue, in gilt bronze, of somewhat colossal proportions, has turned up from a depth of five yards below the soil in the court-yard of the Palazzo Biscione, belonging to Prince Pio. This residence was known to have covered the old theatre, built by Pompey, which contained 30,000 seats, a magnificent porch, &c. &c. The figure is 18 ft. in height, but the greater portion has yet to be excavated. It is a first-class specimen of the best artistic period."

NEW WESTMINSTER CHAPEL.—*Ground Plan.*

WESTMINSTER CHAPEL.

Westminster Chapel, of which the corner-stone was laid on the 28th of June last by Sir Francis Crossley, is designed as an adaptation of the Lombardic style of architecture to the requirements of a building in which convenient accommodation for a large number of persons, and the best acoustical arrangements, were the main considerations. The external features of the design will be seen in our engraving.

The campanile, at the corner of James-street and Castle-lane, is 164 ft. high. The chapel is 120 ft. long and 67 ft. wide in the clear, the sides being parallel for a length of 53 ft., and the two ends being semicircular. The organ-recess over the portico would make the extreme internal length 130 ft. The height internally from floor to ceiling is 50 ft.

The ceiling is flat in the centre and coved at the sides; the whole being divided into panels by moulded ribs, springing at the base of the cove from semi-detached stone columns, which divide the wall in bays of equal width round the whole chapel. The coved part of ceiling is groined between each bay to admit of the windows continuing above the caps of the columns.

The galleries, of which there are two, are to have fronts of open iron-work supported on a cast base of such a height as to secure the advantages of an inclined gallery front. The

NEW WESTMINSTER CHAPEL, JAMES STREET, WESTMINSTER, NEAR BUCKINGHAM GATE.

MR. W. F. POULTON, ARCHITECT.

lower gallery front continues quite round the building, being very deep at the portico end, and quite shallow at the opposite extremity of the chapel. The upper gallery is only three seats wide, and does not continue round either end of the building. The organ will be placed in a gallery formed partly over the portico and partly projecting into the lower gallery, its level being intermediate between that of the lower and upper galleries.

The engraved plan will show the detailed arrangement of the chapel as well as the lecture-room and vestry accommodation. The existing schools are not interfered with in any way, and a passage 5 ft. wide is left between them and the new erections.

Special attention has been given to afford ample means of exit. In addition to the three doorways of portico, which are intended chiefly for entrance to the ground-floor, there are two additional exit porches on each side of the ground-floor. The galleries are approached by four staircases, and each staircase has an exit quite distinct from the ground-floor exits. There are thus eleven distinct exits from the chapel, exclusive of that appropriated for the use of the minister.

The accommodation is for about 3,000 persons, of which number about 2,500 would be in pew and free seats, and the rest in standing spaces. The lecture-room will accommodate nearly 600 persons

Lighting is intended to be effected by thirty-six star-lights suspended from the intersections of the ceiling panels, and such additional lights as may be necessary under the gallery soffits, &c.

Heating has been arranged for on Mr. Haden's warm-air system.

The materials of construction are stock bricks, with red bricks in bands, cornices, &c., and Bath stone dressings.

The contract is being carried out by Messrs. Myers & Sons, at the sum of 12,758*l.*, and is expected to be completed in the early part of 1865. The architect is Mr. W. F. Poulton, of Reading.

The chapel is for the Congregational body.

THE COLOURED DECORATION OF CHURCHES.*

Some good examples of the colouring of roofs yet remain to us. The colouring of the flat ceiling of the nave of Peterborough Cathedral is so well known that we need not describe it. At the east end of the north aisle of St. Mary's, Guildford, we have a good example of the decoration of an apse. The vaulting ribs are painted with a scroll, foliage pattern, and some plain lines of colour, red, blue, green, and white; the spandrel spaces between the ribs have a rudely drawn figure, in a circular medallion, occupying the widest part; and the point of the spandrel is filled in with a very elegantly designed scroll-foliage pattern in buff on a red ground: Fig. 7. The soffit of the chancel arch has also a pattern of foliated geometrical pattern: Figs. 8 and 9. There are a sketch of the whole apse, and enlarged drawings of the details in the second volume of Mr. Colling's "Gothic Ornament," plates 37, 39, 40.

A very similar piece of ornamentation remains in the groining of one of the chapels in Winchester Cathedral. The groining is oblong in plan, carried on two diagonal ribs, which meet in the centre, dividing the whole roof into four spandrels. The ribs are enriched with colour. In each spandrel there are three circular medallions, in which are half-length figures of angels, painted in strong outlines, with the ground of the medallion behind the heads painted blue. The rest of the spandrel is powdered over with stars, which are connected by a flowery foliage pattern. The design is very effective, producing a rich effect without any great expenditure of means. We would venture to suggest that it is the kind of design which is adapted to our present tastes, and within the compass of the artistic skill which the architect can command at a moderate cost.

In the passage which leads to the chapter-house at Salisbury, there is a still simpler design for the ornamentation of groining. The vaulting is in square compartments, divided by diagonal ribs. A kind of star pattern is formed about the central boss in each compartment by four broad short rays, which run half way into the spandrels, and each ray is met by a similar ray, which proceeds from the side. These rays are composed of a rather elaborate scroll of foliage, green, red, and blue, on a claret ground: Fig 10.

Passing on to examples of rather later date and style, we find an example of the entire decoration of a little Early English church, in a very simple style, in a desecrated church at Coggeshall, Essex. The plan of the church is a simple parallelogram, without any constructive division between nave and chancel. The elevations of the building are,—*East end*, three long lancets, grouped under a containing arch, with a light over them in the point of the gable; *west end*, a similar triplet, without any light over it; *north side*, four lancets; *south side*, three lancets and door; the two easternmost lancets shortened to leave room beneath for a group of three sedilia, a double piscina, and a trefoil-headed credence. There is a semicircular string-course running under the windows; the angles of the window-splays have a bold roll; the wall plate has two rolls, with a hollow between. The colouring is as follows:—Below the string-course the original buff-coloured plaster is left untouched. Above the string the plaster is painted in masonry pattern of double red lines, one line dark red, the other lighter; the oblongs are about 12 in. long by 5½ in. wide, the lines $\frac{1}{16}$ in. thick, and ¼ in. apart. This pattern runs round the roll at the angle of the window-splay, and 2 in. or 3 in. in the face of the splay, where it is stopped by a vertical double line (one light, the other dark), and the rest of the splay has the masonry pattern in dark single lines only. In the easternmost window, however, on the north side, and in the east and west windows, the double lines continue on the splay. The spandrels of the west window have only the double masonry pattern continued on them; but in the east window the spandrels are ornamented with a flowing foliage pattern in red lines, with a narrow border hatched with red lines. The string-course is an emerald green, which has been protected by some glaze, so that it has not met the usual fate of the green in mural paintings, but has retained its vividness. The wall plate has its two rolls similarly painted with emerald green, the hollow between being white. On the wall, at the back of the middle sedile, there are traces of a cruciform nimbus, which is enough to prove that there was there a figure of Our Lord; the plaster is completely defaced at the back of the other sedilia, leaving us no evidence whether they also were painted with figures. Part of the original roof remains over the east end, and the remainder of the roof seems to be made up out of the original timbers, but no trace of painting can be detected upon them. Fragments of a pavement remain, which is, however, of later date than the wall painting, enough to show that it was of a geometrical pattern of buff green and dark red,—the colours used in the walls,—and thus we are able to restore exactly to the mind's eye the whole scheme of colour employed in the decoration. In this period, as in the earlier, we sometimes meet with elaborations of the masonry pattern; there is a good example at Great Wenham Church, Suffolk, where there is a small vesica-shaped leaf in each corner, and a small cinquefoil in the middle of each stone. The pattern is bordered by a good scroll foliage of Early English character. At West Walton, Norfolk, there is a rather curious design in the clerestory. The ground is covered with simple masonry pattern, and in every bay of the clerestory is painted a representation of a tapestry hanging, made as if it were stretched in an iron frame, and hung by four loops upon the wall. The patterns of these hangings are all different: one is divided into a network of long hexagons, red in one horizontal row, and buff in the next, charged with white fish; in another are horizontal bands of red and buff,—the red bands bearing couples of buff doves, within a buff circular line, the buff bands bearing red *fleurs-de-lys* within blue lines; in another, on a red field, rows of buff circles inclosing buff griffins and *fleurs-de-lys* in alternate rows, with small buff cinquefoils between the circles; in another, the field is divided into horizontal rows of lozenges; in one horizontal row the lozenge is buff with a sexfoil in the centre; in the alternate row there are buff *fleurs-de-lys* on a red ground; in another the field is divided into lozenges, with a star of six points in each lozenge; in one diagonal row there are red stars on a red ground; in the alternate diagonal row are red stars on a buff ground. Some of the Early English tile arrangements in Winchester Cathedral are precisely similar to these two last patterns; the doves are also a common tile pattern. In the wall spaces between the nave windows of the same church there is red masonry pattern on the buff ground with a cusped circle on each stone, red in outline, with a few effective touches of blue. These paintings are represented in Mr. J. K. Colling's "Gothic Ornament," vol. i., plates 58, 62, 63. At Sharncote, Wilts, which was restored a little time ago, the walls were painted with masonry pattern, in double lines, with a multifoil on each stone; and round the chancel arch was a scroll foliage pattern, included within marginal fillets, each fillet divided lengthwise by a wavy line, and the outside half coloured red.

Some interesting portions of Early English decorative painting were found in Braintree Church, Essex. The first is a canopy over the vestry door, on the north side; a broad string-course, of various colours, runs along the wall, and rises into an arch over and concentrical with the doorway. The colours in this band are, beginning at the top narrow stripe, of buff, and then broader stripes of chrome yellow, bright red, bright blue, a strong line of black, and then a broad stripe of yellow. Over this coloured arch is a crocketed and finialled gable in red outlines. The space between the arch and the gable is filled in with a buff foliated scroll outlined in red on a ground of blue. The wall itself is covered with red masonry pattern, in which the stones are of unusual length, and the vertical pointing lines are double, while the horizontal lines are only single. To the right of this canopy there is a painted pillar, blue, which seems to have formed a part of another ornamental design; perhaps of such a canopy as that which was formed on another part of the wall. This was a painted trefoil arch under a crocketed and finialled gable; the arch of three colours,—yellow, red, and white; the gable only outlined in red; and the spaces between the arch and gable filled in with plain blue. Another fragment was a part of the decoration of the original Early English east window. The angle shafts were left in their native colour; the capitals touched with blue in the hollow and red in the projecting members; the arch was painted in chevrons, red and blue, with white dividing the colours; the hollow chamfer in which the jamb-shaft and its arch were set being coloured plain dark red.

Pictures of this date are rare. On the south wall of the chancel of Castle Hedingham Church, which is Late Norman, there may be dimly seen through the whitewash the traces of figure of a bishop in full pontificals, which is probably coeval with the architecture. In the chapel of the Holy Sepulchre, in Winchester Cathedral, there are some very fine Early English paintings in very fair preservation, which have been engraved in the Winchester volume of the British Archæological Association. In one arched compartment of the walls there are three medallions at the top, of which the larger and upper one contains a small "Nativity," and the others each a half-length figure, with some scroll work. Below these is the principal subject, which is the "Triumphal Entry into Jerusalem." Beneath are two subjects side by side, under a round arch: one is the "Descent into Hell;" the other is the "*Noli me Tangere*." In another similar arched compartment, the upper part is occupied by a really very fine half-length of our Lord; beneath is a "Descent from the Cross;" and beneath that, again, an "Entombment." The whole series is worth careful study, as probably among the best examples of the Mediæval art of the period in England.

In the restoration of Hadleigh Church, Essex, in 1857, were found paintings of four different periods. The earliest were late thirteenth century. A scroll foliage string-course ran under the windows at a height of 8 ft., that on the north being different from that on the south side. Beneath this line there were no traces of painting; above it there were many traces of colour all over the walls. The painting seems to have consisted of historical paintings; not arranged in any regular order, but, as was frequently the case, of unequal size and shape, and placed without much attention to symmetry, like a miscellaneous collection of paintings hung on the walls of a gallery; some of them even cut into the foliage string-course. Few of the subjects were decipherable. On the north wall, nearly opposite the entrance, was a "Virgin and Child," of unusual, but very excellent conception. The Virgin, crowned, is standing behind a throne on which our Lord as a boy is seated, in the act of blessing. The whole subject is framed in a crocketed canopy of the Early Decorated character. In the splays of the

* See p. 684, *ante*.

Norman window, just eastward of this painting, were two angels vested in copes, one of them blowing a trumpet, from which a banner hung. On the west side of the "Virgin and Child" was a female figure, with the hands raised in prayer, beneath the outer robe. On the south side of the west wall was a colossal figure, probably that of St. Michael; on the west splay of a lancet window in the east end of the north nave wall, was a figure of St. Thomas à Becket, in full pontificals, the left hand holding a cross staff, the right raised in blessing, and over his head, in Lombardic character, BEATUS TOMAS. On each side of the chancel arch of Preston Church, Sussex, were some paintings of the thirteenth century, in two rows. On the north side of the arch, in the upper row, an "Incredulity of St. Thomas," a "*Noli me Tangere*," and a "St. Katherine;" before these, a "Martyrdom of St. Thomas," which is perhaps the earliest representation known of that popular subject. On the other side of the arch, in the upper row, a "St. Margaret," under a canopy, trefoil-arched gabled and crocketed, a bishop, and a third female figure; below them a "St. Michael weighing Souls," all executed in red outlines, with red and yellow tints rather largely introduced.

Another very complete set of mural paintings, probably of late thirteenth century date, was found on the walls of the nave of Wiston Church, Suffolk. On the north wall there were two horizontal rows of paintings, one under the level of the window-sills, the other between the windows and running on to the jambs, with a little space intervening between the rows. Scroll foliage bands bordered both top and bottom of both rows; and the bottom border of the upper row of paintings was continued on to the splay, and the lower corner of the splay thus cut off is powdered with blue cinquefoils. There was also a painting on the semi-circular tympanum of the Norman north door. Some of the lower line of paintings seem to be incidents in the life of John the Baptist. The first is undecipherable. The second seems to be "Herod, with his Lords, high Captains, and chief Estates of Galilee." The third is a figure sitting before a group of persons, of whom the foremost wears an iron scull-cap. The "Execution of John" is the last but one; and in the last a fragment of John's decapitated head, with the head of an elderly female, indicates the subject to be the presentation of the head to Herodias. Of the upper row only one subject is decipherable; a Franciscan friar holding a cross staff is on the right, a figure sitting on a chair reading is in the middle of the subject, and on the left is a conventional tree, with birds perched on the branches. The picture in the tympanum is very spirited and well executed, but the subject of it is unknown. On the south wall is a more perfect and more interesting series, differently arranged. Between the windows is a series of trefoiled arches, with a picture under each arch. Another row of pictures in rectangular panels bordered by scroll foliage runs under the level of the window sills. The subjects in the arcade seem to be as follows, beginning at the east end; — 1, Annunciation; (window); 2, Nativity; 3, 4, Annunciation to the Shepherds, Angel and Star, Shepherds and Flock; 5, Adoration of the Magi; 6, undecipherable; (window); 7, undecipherable; 8, the B. V. Mary; 9, the Magi warned in a dream (over the south door); 10, female figure with child. Two or three other subjects undecipherable; the paintings of the lower row are too much mutilated to admit of appropriation. There are lines of red in the mouldings of the chancel arch, and a scroll of foliage round it. On the south respond of the chancel arch is a painting of a saint holding a cross, in the same line as the arcade above described; but the wall above the picture is diapered with a trellis pattern, with quatrefoils in the lozenge-shaped spaces of the trellis. On the west wall of the church are two rows of paintings, which seem to have formed one subject, viz. the Last Judgment: the Divine Judge in the middle of the upper row with groups on each side; and in the lower row angels receiving the blessed, and fiends hurrying away the lost. The figures are executed in bold red outlines on the original ground of pale buff plaster, with occasionally a robe or piece of drapery entirely tinted with flat colour, blue and red only being used; the style of art is unusually spirited and excellent, and is equal to that of the finest paintings of the period.

We may here enumerate a few other examples, out of the very many of this period which have been found in a more or less perfect state, as suggestions of the kind of subjects introduced, and especially of the mode of arranging them upon the walls. At Winchfield, Hants, was found a "Last Judgment" of the beginning of the fourteenth century, on the west wall over the doorway; and on the south wall a "Dives and Lazarus," within a scroll border.*

At Broughton Church, Bucks, the wall was covered with paintings, of about the time of Richard II. Between the windows opposite the door, was a "Last Judgment;" in the next compartment eastward, a strange version of "Our Lady of Sorrow," the Virgin holding the dismembered and lacerated body of our Lord, while the surrounding persons hold the detached limbs and heart. Over the south doorway was a St. George and Dragon; on the wall to the east of this two figures, one of a bishop in full pontificals, the other of a female with dishevelled hair, holding a cross.† At Stanton Harcourt, the paintings, of late fourteenth century date, were in two continuous horizontal lines, and the wall beneath was decorated with "an elegant design of diamond panelling. The intersecting lines which gave the diamond shape were enriched with two red cords, intertwined, and at the points of intersection with an expanded flower. Within the diamond panels was a white foliated pattern, and on that an elegant device, which had much the appearance of a pineapple." Of the upper row of paintings nothing remained but the feet of certain persons; of the lower row some subjects remained tolerably perfect. On the south wall beginning at the west end, was first the "Washing the Disciples' Feet," then a "Last Supper," with inscriptions on scrolls above (relating, perhaps, to the subjects of the upper row) and below. On the north wall, beginning at the west, was a "Descent from the Cross;" next, between two windows, a "Descent into Hell."‡

There were some traces of fourteenth century painting on the west wall of Beckley Church, Oxon. At the end of the south aisle a "Virgin and Child," under a cinquefoil canopy, with a diapered background, more fully and elaborately painted than usual; over this some other subject mutilated beyond recognition; and over all an inscription of two lines, in Lombardic capitals. Over the tower arch was a "Last Judgment," and figures on each side of the arch, viz., St. Peter with the patriarchal staff and cross-keys, on the north, and St. Paul, in scarlet robe lined with fur, holding a book and sword, on the south.§

At Great Waltham, Essex, over the chancel arch was a picture of our Lord in glory; and on the spandrels of the arch "St. Michael weighing Souls," and "Death on the pale Horse," painted in flat tints with bold black outlines. Fragments of other figures, evangelistic symbols, and inscriptions, were visible in other parts of the church; and where these paintings were not, the wall spaces were painted of a deep chocolate colour, powdered with flowers and stars.‖

We may notice here that although the fine pale buff plaster of the wall is the usual ground for the mural paintings, yet there are many examples of a dark ground being used. We have already seen that a room at Fountains Abbey had traces of a dark red ground, of probably Norman date. At Great Waltham, just mentioned, the ground was chocolate. At Wells, Somerset, the upper wall of the south aisle was painted red, and powdered with yellow stars.¶ In the early fifteenth century painting in St. John's Church, Winchester, the ground is dark red, surrounding figure paintings in black outline on the buff plaster; and some of the merely decorative painting consists of white powderings on the dark-red ground.** The walls of Feering Church, Essex, were warm slate colour, powdered over with roses and fleurs-de-lys, with shields of arms introduced in the spandrels of the arcade of the north aisle.

Some of the Norman piers on the north side of the nave of St. Alban's have had their massive sides ornamented with Scripture pictures, which seem to be of fourteenth century date. On one, the fourth from the west end, facing the nave, is a rather fine "St. Christopher," painted in brown reds, the background powdered with quatrefoils. On the next pier, eastward, is a "Crucifixion," with SS. Mary and John, the cross ragulée. On the next, another "Crucifixion," with SS. Mary and John, very similar to the last. On the next, the angles of the pier have been cut away to leave a plain face, and then the broad semicircular shaft which projects from the square section of the pier, and this angular face, have been covered with paintings. On the semicircular shaft are two paintings, one above the other. The upper one is a "Crucifixion," with SS. Mary and John beneath, on a red ground. The lower picture is placed under a round trefoil-headed canopy, with angels in the spandrels, and seems to be the "Coronation of the Virgin." The upper picture on the angular face consists of two figures, the subject unreadable, painted on a masonry-pattern ground. The lower picture here, also, is placed under a trefoil-headed canopy, with a scroll pattern in the spandrels: Fig. 11. It seems to consist of a single figure on a background powdered with a pattern of dots. The ornamental details of this pillar supply us with several elegant scrolls and other details worth noting. Here (Fig. 12) are the scroll which runs immediately under the capital, and another scroll which ornaments the narrow vertical slip of the pier on each side of the semicircular shaft. The middle arch on the east side of the north transept has also some ornamental painting on the pier. The face of the pier under the arch is divided into lozenges, charged with lions passant and fleurs-de-lys alternately, the colours being buff on red ground. The return of the face has a vertical row of single lozenges, with alternately a lion rampant and a foliated ornament. The next face, parallel with the soffit, is divided into white and yellow masonry, like the Norman painting; the next return has a row of lozenges, charged alternately with crosses and fleurs-de-lys. On the upper part of the broad pier, on the right of this arch, is a very good painting of the "Incredulity of St. Thomas," 8 ft. 10 in. by 5 ft. 10 in., probably of late fifteenth century date, which is engraved in the *Archæological Journal*, vol. ii., p. 386.

The groining of one of the towers of Carlisle gives a very simple but effective example of colouring. Only the narrow soffit of the groining ribs is coloured red, with a gold shell ornament at the intersections of the coloured lines. The decorated groining in the passage through the former lady-chapel at St. Alban's has some ornamentation along the central straight groining rib, which affords us the two very beautiful examples of foliated scroll work of this period represented in the accompanying woodcut: Fig. 13.*

THE METROPOLITAN INDUSTRIAL EXHIBITIONS.

The North London Exhibition, which is to be opened on the 17th of October, has every appearance of being a success. A large amount has now been subscribed to the Guarantee Fund, and amongst the guarantors is Miss Burdett Coutts. Lord Russell is to open the exhibition. The number of local industrial exhibitions in the metropolis is on the increase. One is to be held in the east of London, at no distant date: in the district of Marylebone, one is to be opened about Christmas; and it is intended that a second exhibition of the products of the working classes shall be held in Lambeth in April next.

The South London Exhibition will be opened on the 1st of February next. The Prince of Wales is to be invited to become patron of the exhibition, the Earl of Shaftesbury president, and Earl Granville, the Duke of Buckingham, Earl Stanhope, Lord Brougham, and other noblemen and gentlemen, vice-presidents. A guarantee fund of 1,000*l.* is to be raised by voluntary subscriptions, of which sum, it appears, 600*l.* have been already guaranteed by the committee. Persons eligible as exhibitors must live within the southern postal districts (south, south-east, and south-west), and belong to the working classes. Articles exhibited by females will be eligible for all prizes. No money prize will be more than 10*l.* or less than 1*l.*, and no article will be eligible which has already received distinction from any exhibition. Notices of articles to be exhibited, and applications for space, must be sent in on or before January 1, 1865. The exhibition will continue open daily for at least

* To be continued.

one month (Sundays excepted), between the hours of six and ten every evening, except Saturdays, when the hours will be from three to ten. The prices of admission will be 2d. each person; children under twelve, half-price; weekly tickets, admitting once each day, 6d.; and season tickets admitting to the opening, 2s. 6d. Exhibitors will be free at all times.

INTENDED RESTORATION AND ENLARGEMENT OF JARROW CHURCH.

The announcement that the ancient church of St. Paul at Jarrow is at length about to be restored and enlarged, under the care of Mr. Gilbert Scott, must be interesting to churchmen throughout England; for this little edifice is, historically as well as architecturally, one of the most remarkable of the ecclesiastical monuments of this land; and is, at all events, one of the very oldest churches in the kingdom. Its history extends back nearly twelve hundred years; and the chancel and tower, if not actual relics of Bede's great monastery, are of very early Romanesque work, and present many characteristic peculiarities.

The original building, of which Bede witnessed the completion, and which was founded, as appears from the curious dedication-stone still in existence, in A.D. 681, was one of the few churches that had been built of stone in the ancient kingdom of Northumberland, which then extended from the Humber to the Frith of Forth; and the noble abbot who was its architect adorned it with such works of art as had not before been brought to England. History tells us that this church and monastery stood forth, long before the days of Alfred, as one of the most illustrious foundations in Christendom. As from Iona, so from Jarrow, the light of religion and learning shone afar; and the fame of Bede, no less than the benefits diffused from Jarrow as a centre of Christian life and education, gave a wide renown to this remote monastery of the Tyne. Within two centuries from Bede's time, however, the buildings had been ruined by the Danes; and very soon after the establishment of the see of Durham, the possessions of Jarrow were transferred to the new and princely foundation upon the Wear. From thenceforth down to the Reformation, Jarrow was maintained as a cell or dependent monastery; but Durham kept alive the fame of the immortal historian-monk, and in the restored monastic church of Jarrow maintained perpetually the worship of God. In those days, however, the parish had few inhabitants, whereas now the little church is surrounded by crowded habitations, and is totally insufficient for the vastly increased population. The district attached to this old parish church is, indeed, supposed to number 10,000 inhabitants, while the building holds few more than 300.

In modern times the nave was rebuilt, but in wretched and incongruous style, and original features of early architecture in the chancel were defaced or concealed by tasteless alterations. Thus, the small Romanesque windows high in the wall were blocked up, and large Gothic windows inserted, and the high roof of the chancel (of which the original mark remains against the tower) was replaced by a roof absolutely flat. The four piers on which the tower is supported are found by Mr. Scott to have long since partially given way, so that huge rents in the walls and arches followed; and notwithstanding the unsightly buttresses which were built to remedy the evil, the north-east pier of the tower is found to be so shattered that it may yield to any storm. On removing the plaster from the walls they proved to be in a sad state in many places, and it is surprising that the fabric has not long since given way. This grey old tower is a most curious monument of early (probably ante-Norman) days; and seen from afar, rising weird and weather-beaten amid the smoke of manufactories and the forest of masts that overspread the bay where King Egfrid's fleet once rode, it seems standing there a landmark of time, and places the decaying church and the ruined buildings of the monastery around it in melancholy contrast to the associations of Jarrow in the past.

Mr. Scott recommends the enlargement of the nave, by the addition of a north aisle, and perhaps some extension to the west—the addition to be in some simple and bold but unpretending variety of Gothic architecture. He recommends also new roofs to both chancel and nave. Since his report was made, the incongruous vestry on the north (in which visitors were shown the so-called chair of Venerable Bede) has been taken down, and it is proposed to rebuild it in such a form as to make a small transept on the north side of the tower. A curious low window, which the vestry concealed, has been discovered, and a beautiful old priests' door has been opened, and is to be restored. Arches, now walled up, appear to have opened from the chamber above the vaulting of the tower eastward into the chancel and westward into the nave, forming that chamber into a kind of rood-loft. It is recommended that these arches be restored and opened, and that the organ be placed in this chamber.

The restoration committee consists of the incumbent (the Rev. W. P. Philp), the curates, and churchwardens, aided by several gentlemen of the neighbourhood; and Sir Walter James, bart., has taken a most zealous interest in all the proceedings of the committee, and helped forward the good work efficiently. The sum required for the restoration is about 3,000*l.*, of which about half (or sufficient to restore the chancel and the tower) has been subscribed, Sir Walter and Lady James contributing 500*l.*, the Dean and Chapter of Durham, 200*l.*, and the Archbishop of Canterbury, the Bishop of Durham, the Ecclesiastical Commissioners, the Diocesan Church Building Society, and neighbouring landowners, employers of labour, and inhabitants, being also contributors; but from the peculiar circumstances of the parish, and the fact that the great and increasing population are chiefly labourers, aid is of necessity sought from churchmen in all parts of the country; and it is to be hoped that the restoration of a church which has a national rather than a merely local character, will be found to enlist the sympathies of churchmen generally. It is most desirable that the committee should be enabled to invite tenders for taking down the present wretched nave and building one more suitable to the character of the church and the wants of the parishioners. The committee have met several times, and are proceeding vigorously. A contract for the restoration of the tower and the chancel has been entered into, and on the 13th of September Mr. Scott spent the day in directing the labours of the workmen upon the spot, and made some interesting discoveries.

RETFORD TOWN HALL COMPETITION.

Eighteen sets of designs were sent in for this competition, although 104 applications were made for a plan of the site.

Amongst the competitors were Messrs. Swallow (Leeds), Godwin & Crisp (Bristol), Clarke (Nottingham), Fuller (Manchester), Innocent (Sheffield), Robinson (London), Sorby (London), Wilson (London), Bellamy & Hardy (Lincoln), &c. The designs were all under motto; but previously to their being inspected by the council, all the mottoes were covered over.

After several meetings, and the whole of the designs had been open for public inspection, the council ultimately selected design No. 7, which proved to be by Messrs. Bellamy & Hardy, of Lincoln; and those gentlemen have received instructions to carry out the work so soon as the corporation have completed the necessary arrangements with regard to funds, site, &c.

The successful design is Palladian in character, treated with considerable boldness.

CARVERS AND GILDERS' ASYLUM.

The report of the committee states that they have been obliged to reduce the sum of 1*l.* per month allowed to each inmate to 10s. per month. The Institution needs additional support not only from friends, but from the class (journeymen carvers and gilders) for whose benefit it was solely established. It does not appear to be so well known as it ought to be among the workmen: the subscription at twenty-one years of age is only 2d. per week, whilst with those joining at forty years it is but 5d. per week, to secure a house and good garden for life, free of rent, on attaining the age of fifty-five years without any election, and an allowance of 1*l.* or 10s. per month, according to the state of the funds; the inmates being allowed to work at their trade to the extent of 1*l.* per week. The houses are freehold, and free of incumbrance. The wood-carvers number over 500, and the gilders 600 or 700, and yet not fifty belong to this the only Provident Society in the trade. An effort is wisely being made to remove its meetings from a public-house to a Workmen's Club or private house.

ARCHITECTURE IN THE CITY.

Cordially agreeing with the excellent remarks and much needed criticism in your article on London Architecture and the City, I may, perhaps, be allowed to point to one inconsistency that has escaped notice. Buildings deserving observation are not to be read running, much less can elaborate detail be contemplated "with lingering eye and fascinated gaze." With all its present and future adornment, Lombard-street,—little more than a mere lane—at least in its proportions,—of the height of the houses compared with the width between them, which sort of *narrowness* renders it impossible to see the whole of a front in its vertical direction. Another highly unfavourable circumstance is, that though in that street and its neighbours architecture cannot be said to "waste its sweetness on the desert air," much to be feared it is that its beauties and graces are all thrown away upon the hurrying, bustling throng. In fact, whoever wishes to inspect the recent architectural doings in the City leisurely and at all comfortably, ought either to rise with the sun some fine summer's morning, or else go on that day of the week when the busiest streets are all but deserted.

It never rains, says the proverb, but it pours; so, mistaking the reverse of wrong for right, we rush from one extreme into the other opposite to it, and have exchanged what used to be plainness, even to sordidness, for too pretentious exuberance of embellishment. As indicating full coffers and commercial prosperity, ornateness of its exterior well becomes a banking-house. Still the *est modus in rebus* ought not to be disregarded. Seldom, it is to be feared, is aught like sufficient consideration given to the various influences, all more or less adverse, of uncontrollable circumstances. Hence, what may show very satisfactorily when exhibited *in abstracto* as an isolated elevation upon paper, where no note is or can be taken of circumstances *in concreto*, may, when executed, disappoint. At any rate, London, and more especially the City's atmosphere, must in a short time degrade, by sullying it, the fairest stone, and must render all minute and delicate carved work illegible; wherefore it would in every respect be decidedly better to adopt in our street architecture a more sober and less ambitiously ornate style of design,—one stamped by simple yet boldly pronounced features, that would tell effectively however weather-beaten, and might, perhaps, like hams, be even improved by being smoked,—that is, smoked just enough and no more than to tone down rawness, and to produce a mere *soupçon* of *ærugo*, of that which artist-architects call "colour," and the vulgar and the dealers in whitewash call dirt, although in due moderation it is to a building just what the involuntary blush of health is to beauty's ripened Hebe cheek.

Art-Lover.

HEALTH, AND THE VENTILATION OF SEWERS.

We have seen numerous letters urging public bodies to spend large sums of money in sewerage, and it is a measure most desirable and necessary to be adopted; but it may not be amiss to take a glance at the results which have followed the construction of extensive sewers in some of our towns, if not indeed to learn a lesson from their example.

Not very long ago, we read the uncomfortable announcement that Liverpool was the most unhealthy town in England, whereas enormous sums had been expended there for sewerage which was considered of first-rate character. Still more recently we have heard of a large system of sewers in the town of Dundee, which was communicated in a paper to the Institution of Civil Engineers during the last session; and yet we are now told that malarious fevers are rife in that well-drained town. Several other localities might be mentioned, but for brevity's sake I will not now refer to them, my object being to show that where money is expended common sense and practical ability should be exercised. There are not a few of our engineers who entertain and carry out the principle that sewers need no ventilation, except such as they obtain by the street gullies and rain-water pipes from houses; and I believe that to this one mistake a great deal, if not all, the mischief of ill-health in our sewered towns is attributable. But few of our towns have proper ventilation-shafts and gratings above the sewers, and it is

no *problem*, but an *absolute certainty*, that the foul gases generated in and evolved from sewers must find their way into houses through the rain-water pipes, and through the street gullies when not fully charged with water so as to trap down the effluvia. In hilly localities, where the sewers have a rapid fall, the more elevated portions become so charged with sewage gas that no street gully could contain a sufficiency of water to seal down the effluvia; and it is a well-known fact, that the water in gullies frequently dries up altogether in hot weather from the effect of the heat, and from the quantity of silth and dust which passes into them.

I have stood over several gullies in Liverpool, Newcastle, and other towns, and watched those especially in the higher elevations, until I satisfied myself that nothing could resist the accumulation of gas in the sewers below. I have also seen sewers opened in those localities with the most offensive results to the neighbourhood, while sewers which have direct and constant ventilation are free from foul smell and pent-up gas, and may be traversed without danger or nausea. I could point out particular localities in these high districts, where fever and malarious sore throats are constant visitants, and instances where the patients, when removed from the neighbourhood, have rapidly recovered, but have been subjected to the certain return of those complaints when brought again within the same influence. These are facts which are undeniable, and it would be well if we took advantage of them. For my own part, I believe that it would be a fortunate day for Liverpool, for Dundee, for Newcastle, and many other towns, if they were to introduce what they now have not, proper ventilation to their sewers. This would not interfere with what has now been done, which in all other respects has, I believe, been *well done*; while I feel persuaded that it would result in the greatly-improved health of those and many other towns. C. E.

*** We have urged the necessity of attention to this point again and again, and have given illustrations of efficient ventilators. Further, let us repeat, sewers alone will not prevent all unnecessary illness in towns.

MR. JACOB BELL'S BEQUEST TO THE NATION.

Sir,—Mr. Jacob Bell, who died some five or six years ago, bequeathed a few fine pictures to the National Gallery, among which were, "The Maid and the Magpie," by Sir Edwin Landseer, R.A.; "The Derby Day," by W. P. Frith, R.A.; "The Horse Fair," by Madlle. Rosa Bonheur. It was understood that the above were retained for the purpose of engraving. The engravings from them have long since been published, so that there appears no valid reason why they should not now appear in the National collection. The original "Horse Fair" was said to have been sold in the United States, and that the late Mr. Bell's picture was a reduction by the fair artist. But such a reduction has been exhibited at the Canterbury Hall and in the City. Recently I heard in Paris that Madlle. Bonheur was now painting this subject for the National Gallery. Perhaps I was misinformed.

Idler in London.

SEATS ON BRIDGES.

I wish to draw attention to a matter of, I think, some importance, namely, seats on bridges. It seemed the fashion formerly, when there was a bridge to be built, to set apart a little space for resting-places; in fact, the design seemed incomplete without some such arrangement, nor was it considered a disfigurement; but now such conveniences are seldom thought of, or, if thought of, the idea is set aside. We have many bridges across the Thames, old and new, with seats and without, but recommend me to those with resting-places for the weary wayfarer, far before the more recent ones which have no seats. I am not advocating those barge-on-end looking affairs seen on Vauxhall Bridge, or any such umbrella-like contrivance, although certainly very useful in a storm,—but merely want a seat. The new bridge at Westminster is, no doubt, a noble work, but it is incomplete; so is the Victoria Bridge, at Chelsea; also Hungerford Bridge, the longest and most toilsome across the river, with its steep wooden ascent at each end, taking folk's breath away. How refreshing would a resting-place be on this bridge to many an old person, whose business requires them to cross the river at this spot: there are half-a-dozen places where seats might very well be put without in any manner obstructing the passage-way. Certainly the bridge is not yet finished; therefore in this case I may be somewhat premature: it may be the intention to place seats upon it in the several recesses,—I hope it is. Will the new Blackfriars Bridge have seats upon it, as it should have? Many a time there was to be seen upon the old one a perspiring man wiping his hot head, whilst his load rested on the seat beside him: to such persons a seat is an indescribable boon. There are but very few places where a porter may rest his load in the streets of London without being in everybody's way; and when he is obliged to cross a bridge with his burthen, anything but the easiest part of his journey, truly a seat is as an oasis in the desert to him.

But, perhaps, the matter is not always looked at from this point. Suppose a person wishes to enjoy the panorama of the Thames from one of the bridges, it would be much more pleasant to sit down to it than to hang over the parapet on your elbows. When the embankment is finished, the view from a bridge will be a pretty sight, which multitudes will indulge in, doubtless; and, by-the-by, on mentioning the embankment, will there be any seats there, in nice out-of-the-way places, where the fatigued will not be run over?

J. G.

SLATING.

In reply to an inquiry (page 708) upon securing roofing slates to open battens, allow me to say the most secure method is nailing the slate as near the centre as possible. This method will not allow the wind to blow the slates off. Duchess slates should be gauged 14 in. from the bottom, and holed on the outside, which leaves no hollow for the chipping of the slate for water to get round the nail, 1 in. from each edge. The reason why the slate should not be holed at 13½ in. is, that it will not allow any space between the head of the slate and the nail of the next course of slate. Duchess slates 24 in. long: take out 3 in. lap; two battens 10½ in. apart, ½-in. nail-room, make the 24 inches. All slating should be done on this principle.

Joseph Hayes.

Another writer says:—One other reason I may give why the slates should be secured towards the middle is that, in the old-fashioned way, there was much greater difficulty in repairing the roof, since the nails were not so easy to get at.

The practice of nailing the slates close to the lap has for a long time been discontinued in London, but is, I rather think, still kept up in some parts of England. Alfred Braby.

CONTRACTORS' GUARANTEE COMPANY.

Sir,—I have often felt surprised, in this age of enterprise and company-forming mania, that attention has not been directed to the formation of a Builders and Contractors' Bond or Guarantee Company. In my opinion, a project of this character would be highly remunerative to the shareholders, and a boon to the building world. It would enable the honest and independent contractor to secure a guarantee by the payment of a small premium, and thus free himself from obligation to his merchant, to whom he may have to pay a higher rate; and would also have its influence over the reckless contracting that is made patent to us through the medium of your valuable journal. Wm. Glover.

WIDE TENDERING.

Sir,—In your issue of the 17th instant there is a rare example of wide estimating in your list of tenders, the explanation of which I was curious enough to seek. On inquiry, I ascertained the following facts:—The architect's estimate was a little below 1,200*l.* The lowest tenderer had confessed to a very considerable mistake, and the highest had cubed the work at 1s. 3d. per foot (6d. would have been nearer the mark). Might not this system of reckless cubing account for very many of the absurd differences so often to be observed in your list?

Farnhamensis.

New Docks for Newport. The scheme for new docks on land known as the Hundred Acres, at Pill, on the western side of the river Usk, as suggested by Mr. A. Bassett, C.E., of Cardiff, and submitted to Lord Tredegar, is likely, says the *Merlin*, to be carried out. The plans and estimates have been laid before Mr. Abernethy, hydraulic engineer, who has endorsed the opinions entertained by Mr. Bassett, both as regards the site and the estimated cost.

METROPOLITAN BOARD OF WORKS.

The Metropolitan Board of Works met, on the 23rd ult., for the first time after a recess, Mr. J. Thwaites, the chairman, presiding.

Landing Façades.

The Board proceeded to open tenders for the erection of pumping-engines at Abbey Mills, for main drainage purposes. There were nine tenders, and that of Messrs. Rothwell & Co., for 51,570*l.*, was accepted, subject to inquiries being satisfactory as to sureties.

Proposed Statue of Sir James Outram.

A report was brought up from the Thames Embankment Committee in reference to a letter received from the First Commissioner of her Majesty's Works, &c., relative to the erection of a statue of the late Sir James Outram on the land reclaimed by the Thames Embankment. The statue, which will be of bronze, and of colossal proportions, will be produced by public subscription. The committee were of opinion that the application should receive the most favourable consideration of the Board.

Mr. Carpmael moved that the report of the committee be received and adopted, which was unanimously agreed to.

Subways.

The Chairman said the history of subways was well known to all the members of the Board; but before they proceeded to construct the Thames Embankment it would be for them to consider whether, in the event of a subway not being formed, a proportionate amount of the estimated cost should be deducted from the tender. It would then be for the Board to consider whether they would construct a subway in the Embankment, and rely upon a hope that Parliament would take a different view of the question to what it had done in the last session, for there was no doubt that these subways would be of great public convenience. The committee of the House of Commons had last session struck out of the Bill all the clauses which compelled gas companies to lay their pipes in the subways, and to contribute something towards the cost of them.

It was resolved that the subject be considered on that day fortnight.

The Embankment Contractors.

The Chief Engineer read a correspondence which had passed between himself, the Thames Conservancy Commissioners, and Messrs. Furness & Ritson, the contractors for the Thames Embankment works, in reference to the description of materials used for filling in the space between the line of embankment and the present river wall, the Conservancy Commissioners complaining that, in violation of an agreement, dry rubbish had been used instead of materials dredged from the river. On the part of the contractors they stated that the Conservancy Commissioners sold the best quality of the dredging of the river to builders at advanced prices, and that they got nothing but the refuse, or mere mud, and even of that they could not obtain an adequate supply.

Mr. Newton asked the engineer whether the material from the land was not better than the best dredgings taken from the river.

The Engineer said the materials supplied from the land were equal to the best materials supplied from the river, and much better than some of it.

It was resolved that the contractors should be prohibited from taking materials from the land so long as suitable dredgings could be obtained from the river.

SANITARY MATTERS.

Great Berkhampstead.—A limited joint stock company has been formed for supplying this town and district with water, and for the erection of baths and washhouses in the town. The necessary capital has been subscribed and Messrs. Atkins & Son, civil engineers, have the construction of the works, which will be carried out under the superintendence of Mr. Atkins and Mr. Alex. F. Painter. Plans, surveys, designs, and contract have been handed in; and our correspondent informs us that the works are designed to lift the water from an artesian boring to a height sufficient to command nearly every house in the town, with ample power to lift the water to a second lift of 200 ft. at stated times in the week. The reservoir will

hold 90,000 gallons of water. The low pressure will be constantly on, and street hydrants placed for flushing streets and to act as fire-plugs. In conjunction with the water-works will be ten baths in a brick building, arranged with some regard to taste and polychromy. Shower, hot, and cold baths will be provided; also two original and unique vapour baths. One special feature will be the ventilating and heating of the baths to afford convenience to the bathers. Contiguous to the bath-house will be a washhouse. The buildings have been designed by Mr. James Castle, architect, Oxford.

Clifton.—The Bristol town council have unanimously passed a resolution to the effect that the council having considered the memorial from the parish of Clifton on the subject of the inadequate supply of water furnished by the Bristol Water-works Company, and the statements made in reference thereto, are of opinion that the Company's present sources of supply are insufficient; and they earnestly recommend the Company forthwith to adopt the necessary measures for obtaining a further supply from the springs of Clifton,—viz., Richmond Spring, Sion Spring, and Hanley Spring, all of which they purchased on the formation of their Company, but which they have unhappily closed, this council being of opinion that such springs would be found a most useful auxiliary to the present supply, especially in seasons of drought. A sub-committee was also appointed to form a deputation for the purpose of conferring with the Water-works Company, and to report the result.

Water Rights.—It has been held by the Court of Exchequer, in the case of the *Stockport Water-works Company* v. *Porter*, that where a riparian proprietor granted land, part of his former riparian estate, but separated from the stream by land of the granter not included in the grant, with a grant from the granter of a right to lay pipes from the stream to the granted land, and take water by means of them from the stream to such granted land, the grantee could not maintain an action in his own name against a riparian proprietor for fouling the waters of the stream, but he could enforce his right as against the granter.

Idle.—The Local Government Act has been adopted in this village and sanctioned by the Home Secretary.

Jarrow.—We understand that at present Jarrow is suffering severely from the prevalence of fever, of an aggravated character, caused chiefly by the overcrowded state of a large number of the houses there. At a meeting of the Local Board, held the other day, it was stated that in one house, 15 ft. by 15 ft., there were no fewer than twenty-one persons cooped up. It is to be hoped that some measures will be taken speedily to remedy this state of matters.

Overcrowding and Small-pox in Bishopwearmouth, Sunderland. — It appears that in some dwellings in Simpson-street there are rooms averaging about 13 ft. by 8 ft., and 8 ft. 4 in. in height, two of such being inhabited, night and day, by twelve persons, or six to each room. In such places it is not to be wondered at that small-pox has broken out. The authorities have taken measures for diminishing the overcrowding.

PORTSMOUTH.

This borough, which numbers nearly 100,000 inhabitants, has at length thrown off its state of exceptional lethargy, and declared for sanitary progress. The borough has hitherto been governed by three distinct and mutually jealous sets of *improvement* (?) commissioners; but the Local Government Act came into force a month ago, and on Monday last the town council, by a very large majority, resolved to adopt the drainage scheme prepared by the borough engineer, Mr. Lewis Angell, C.E., the estimated cost of which is 100,000*l.* This scheme has been submitted to Mr. Hawkshaw, F.R.S., and confirmed by him in all essential features.

The report of Mr. Angell states that "in few boroughs could be found a greater absence of those sanitary measures which an improved state of knowledge has taught us as necessary to life and health. With few exceptions, the streets are without sewers, and the houses without drainage." On account of the flatness of the borough, the nature of the soil, and the remoteness of the outfall, several serious difficulties will have to be surmounted; but the works, when executed, may be expected to prove of inestimable advantage to the borough.

CARTOON EXHIBITION, BRUSSELS.

Mr. J. Leighton writes,—Whilst, at Malines, they have an exhibition of Mediæval art, at Brussels will be found an international exhibition of cartoons, including photographs from colossal drawings in monochrome; the display being held in a temporary building of wood, situate at the rear of the Royal Palace, containing many works of a remarkable character, most of them having been used in the preparation of mural decorations—bearing the marks of the pounce-holes and the stilus—an interesting show of a practical character, and not unpopular, if the attendance may be taken as a test. They are of all shapes and sizes, from large spandrels to long friezes, the grandest big as a house, the smallest fit for a book illustration. At the end of the Grand Salon is placed Kaulbach's enormous work, "The Reformation," where Luther, standing, in the centre, holds aloft the Bible, which sheds its rays around upon the heroes of the period, our own Shakspeare forming a prominent figure in the foreground. Echter has two designs, I believe, executed for a railway station, "The Telegraph," and "The Locomotive;" Müller, of Dusseldorf, many religious subjects; Guffens, of Antwerp, several historical incidents connected with that city; Van Orsel, the drawings used by him in the decoration of the Church of Notre Dame de Lorette, at Paris, which is not the most distant capital that sends, for there are several from Vienna and Berlin, including some large and small landscapes, of great power, in black and white, on paper. Of the Antwerp Salon, it may be remarked that it is above an average exhibition, but few of the leading masters of the Belgian school being absent,—an exhibition that for arrangement and practical quality would put our Royal Academy to the blush. Though an ancient corporation—an academy twice as old as our own,—it exhibits many more works, and that fairly, none being placed too high for observation, or, where large, above two lines in height; all being in black wooden boxes, that greatly preserve the frames, and make the sides square, much aiding the general effect, the fine fillets of wood between the works filling up the space very agreeably. In architecture there are many beautiful drawings, though none are "pretty:" ground-plans and elevations are included.

INFANT MORTALITY IN SUNDERLAND.

In reviewing the Registrar-General's annual stock-taking, the *Sunderland Times* gives some special facts relative to the sanitary state of that district which deserve attention. The writer says,—"The average annual mortality at all ages for the ten years between 1851 and 1860, to every 1,000 living, was in England 22; London, 24; the Northern Counties, Durham, Northumberland, and Westmorland, 22; Liverpool, 33; Manchester, 31; Newcastle, 27; Sunderland, 25; South Shields, 24; Tynemouth, 23; and Darlington only 20 in the 1,000. The deaths under one year, averaging the whole of England and Wales, were 23½; in Sunderland, 26½; Newcastle, 26; South Shields, 24¾; Tynemouth, 22¾; Darlington, 21$\frac{6}{10}$ per cent. to the whole number of deaths. In other words, whilst of the 2,968 deaths in Newcastle, 772 were under 12 months; in Sunderland, out of 2,142 deaths in the year, 566 were within the first year. The proportion of deaths under 5 years was in England 40¾; Sunderland, 48½; South Shields, 48¼; Newcastle, 46; Tynemouth, 42½; Darlington, 40$\frac{4}{8}$ per cent. to the whole number of deaths. Thus, whilst our own town was little above the average of England in the per-centage of deaths at all ages, yet the deaths under 5 years amounted to nearly one-fifth more than the average of England at the same ages. Had the deaths of children in Sunderland been at the average rate of England, 170 lives would have been saved that were sacrificed from a cause or causes peculiar to the town. It is evident that it is not to defects in the sanitary condition of the town that this exceptional rate of youthful mortality can be attributed, and this will be still more evident, when, instead of taking the average of ten years before the drainage and other sanitary works were carried out in the borough, we take the deaths under and above five years for the same year—1862. In that year, the deaths at all ages, in Newcastle, were 2,968, which, allowing for the estimated increase of population, would be 26 in every 1,000 living, whilst in Sunderland the deaths were 2,142, a proportion of only 23 in the 1,000. Yet the infant mortality of Sunderland exceeds that of Newcastle. We may well ask whether the enormous excess of deaths in the first few years of life which prevails in every part of the kingdom, and to a special extent in some localities, is the result of natural and unavoidable causes, and incapable of any material mitigation. We cannot come to the conclusion that it is so, as although we have no special statistics to show the proportion of the deaths of children to adults in the upper and middle classes of society, we are not without sufficient grounds for stating that the proportion is very much below that which prevails amongst the poorer classes."

One reason for this excess of infant mortality in this district may be found in the fact, that out of forty-five districts, embracing London and the counties of England and Wales, twenty-five of these rank higher than the county of Durham in the number of males who could sign the marriage register; whilst as regards females, the county stands lowest but nine in the adult educational scale. The very low state of education of women, as shown by these returns, is a fact of very serious importance, and should stimulate to some special efforts to remove the stigma.

RAILWAY MATTERS.

The traffic receipts of railways in the United Kingdom amounted, for the week ending the 3rd of September, on 11,605 miles, to 710,445*l.*, and for the corresponding week of last year, on 11,142 miles, to 649,750*l.*, showing an increase of 463 miles, and of 60,695*l.* in the receipts.

The receipts for the week ending the 10th of September, on 11,628 miles, amounted to 701,728*l.*, and for the corresponding week of last year, on 11,146 miles, to 635,960*l.*, showing an increase of 482 miles, and of 65,768*l.* in the receipts.

The following comes from the contractor of the Atlantic and Great Western Railroad:—The first through train from New York to St. Louis, by the broad gauge, over the Atlantic and Great Western Railroad, reached its destination in forty-four hours, a distance of 1,200 miles, without change of carriages or break of gauge,—a feat unparalleled in the railway world.

The railway clearing-house, being essential to the railways, has naturally kept pace with their multiplication. In 1845, three years after its first establishment, the number of companies on its books was only 16: ten years later it had arisen to 73; and it is now 110, with a united mileage of 10,859 miles. The number of companies does not give an adequate notion of the growth of business, in consequence of the leasing and amalgamations which are always going on. The clearing-house knows only the companies which actually work the lines, and deals only with the interchanged traffic, without touching that which is confined to the line of any particular company. The number of stations sending traffic returns monthly is as follows:—Goods and cattle stations, 3,121; passenger stations, 1,817; parcel stations, 2,368. The number of pairs of stations between which bookings are carried on monthly is:—Goods and cattle, 62,470; passenger, 15,145; parcel, 16,626. The average number of railways over which each consignment of goods is conveyed is 3·08; each passenger, 3·46; each parcel, 3·07. The gross receipts for twelve months amount to an aggregate of 8,044,791*l.*, as compared with 401,651*l.* in 1845, and 4,829,649*l.* in 1855. The present total is thus composed:—Goods and cattle, 5,937,753*l.*; passengers, 1,805,915*l.*; parcels, 301,123*l.* Total amount of receipts of traffic of all kinds cleared since the establishment of the office, 81,000,000*l.*

ACCIDENTS BY RAILWAY.

There have been several discussions lately respecting "accidents by railway." "It strikes me," writes a correspondent, "that as regards prevention of violence the adoption of the American and Continental system of entering the carriages at the ends instead of the sides, and having a free communication with the guard, would be the means of prevention. Another matter is, having the carriages built over the wheels, so that no accident can occur at a railway station from falling among the wheels. A plan has been lately devised for the instant stoppage of a railway train in case of danger, and some plan ought to be devised for the rapid clearance of the train in such a

case: could not the sides of the carriages be so constructed as to fall down in the way the ends of the horse-boxes do over the wheels, so that persons could quickly slide down and be out of danger? As regards the danger of shocks by one train overtaking or meeting another, it would be a good plan to carry some light goods *fore* and *aft* of passenger trains, as it will be found, on reading the account of such accidents, that the shock expends itself by breaking so many of the carriages either in front or behind the train (as the case may be), while the passengers in the centre of the train escape with their lives. I need not enlarge on the wisdom of towns having central railway stations, a kindred subject (though not immediately allied to what I have just written): the loss by having the stations at the sides of towns is very great. You would be doing a service by publishing a list (and adding to it from time to time as occasion offered), of such towns as have adopted central railway stations."

FROM IRELAND.

Greenhills, near Drogheda.—A factory, with numerous sheds, intended for the manufacture of cotton, is being erected here: employment is given to a great number of hands in a locality where poverty and its accompanying squalor and filth heretofore reigned. This, as well as many extensive projects for the improvement of his native town, has been set on foot solely by Mr. Benjamin Whitworth, of Manchester. The intended cost is estimated at about 60,000*l.* for buildings and machinery. The People's Hall, in the same town, the gift also of Mr. Whitworth, is being proceeded with. That gentleman seems most laudably anxious to leave nothing undone which a princely fortune can accomplish to raise the condition of the inhabitants in the social scale.

Queenstown.—The Lord Bishop of Cork, Cloyne, and Ross, last week laid the foundation-stone of a church calculated to accommodate 500 hearers, near Queenstown, prettily situate in the harbour of Cork, a place of growing importance. About a year since designs were submitted in competition, and from a number who responded to the tempting bait of a 20*l.* prize, after the not unusual delay, the design of the architect of the now progressing building was chosen. For this church, Mr. Walter, builder, has accepted the contract at about 2,800*l.*, chiefly the gift of the Bishop. At least 800*l.* more will be required to pew the church and fence the grounds around it. The church has been named Christ Church, and will be a very handsome, but withal a simple structure, principally composed of local limestone, with a judicious introduction of Bath stone. It will not fail to be an attraction in this rising and fashionable district. The style chosen is Early English, with, we must add, the stereotyped transeptal form. A tower and spire give a degree of magnificence to the entrance-front or west end. A portion only of the building is to be erected at present, funds being insufficient to complete it as designed. The entire length of the church is 122 ft., the greatest breadth 63 ft. The chancel will measure 29 ft. by 22 ft.; nave, 80 ft. by 33 ft.; and each transept 20 ft. by 14 ft. The tower at the base will be 15 ft. 6 in. square, and will be provided with massive buttresses: its height, with the spire, to the finial, will be 130 ft., and when completed will be a graceful object conspicuous for miles around.

Clogheen.—The Roman Catholic church of St. Mary, Clogheen, is in the Gothic style of architecture, and consists of nave, aisles, chancel, and side chapels and sacristy. The extreme length in the clear inside is 110 ft.; breadth, 60 ft.; and height of roof, 58 ft. The aisles are divided from the nave by an arcade of five Gothic arches, resting on circular limestone columns. The chancel and side chapels are also divided by Gothic arches. The chancel is lighted by three lancet lights, filled with stained glass; the nave by a two-light window. The roof is open, wrought and stained. The church is built of limestone procured in the neighbourhood; the exterior of hammer-dressed masonry.

Kilrea.—The foundation-stone of new schools for boys and girls, adjoining the town of Kilrea, has been laid. The Mercers' Company are expending over 1,200*l.* in this work, which makes a total of about 4,000*l.* laid out by them in erecting teachers' residences and school-houses on their estate. All the schools,—fourteen in number—are in connexion with the National Board, but the landlords endow the teachers with donations and allowances, amounting to 300*l.* per annum. The architect who supplies the designs and superintends the work is Mr. William Barnes, of London.

Belfast.—The ship carpenters of the Protestant persuasion employed at the Queen's Island have struck work. The men alleged that the Roman Catholic workmen, to the number of forty or fifty, had been acting as spies upon them since the riots; and, by picking up snatches of conversation relating to the recent disturbances, had given information to the authorities, and, by such means, caused the arrest of several of their body for being concerned in the fight with the navvies, and in other scenes of that dreadful period. They demanded that Messrs. Harland & Wolff should discharge the Roman Catholics. They were told that their employers would not be dictated to as to whom they should or should not employ. After considerable discussion, they left the yard in a body, and did not resume work during the day. It was feared that the movement would extend to other yards, and to other employments, as well as lead to another outbreak. Precautions were adopted by the authorities, but no disorders took place.

PROVINCIAL NEWS.

Llanelly.—The foundation stone of the new market has been laid here, and the People's Park opened on the same day. Within the last six or eight years this town has become considerably improved in its general aspect. New streets have been formed, and improved shops and buildings have sprung up, and the town has been supplied with water. It has public baths and an Athenæum.

Lincoln.—It is reported that a desire exists on the part of several influential governors of the Lincoln County Hospital to pull down the present building, which is considered one of the worst arranged institutions of the kind in the kingdom. Of course the great drawback is the difficulty of raising the large sum which would be required, especially when it is considered that only two or three years ago between 2,000*l.* and 3,000*l.* were subscribed for the purpose of enlarging and improving the present building.

Blackpool.—At a meeting of the Blackpool Land, Building, and Hotel Company, held at the Clarence Hotel, Manchester, it has been resolved, after much discussion and some opposition, that the directors be empowered to proceed at once with the building of an hotel, the cost of which is not to exceed 15,000*l.*

Sunderland.—Mr. Hutt, the vice-president of the Board of Trade, on a recent visit to Sunderland, was requested to signalize his visit by laying the first stone of the large new dock which the authorities have undertaken to construct to the south of their former dock, and on the same plan of enclosing a portion of the sea. For this purpose large preparations had been made. Mr. Hutt having repaired to the spot, went through the formalities usual on such occasions, and pronounced the first stone duly laid, addressing a few emphatic words to the company assembled on the occasion.

CHURCH-BUILDING NEWS.

Southsea.—The first stone of a new district church has been laid at Southsea, by the Archdeacon of Winchester. For many months the want of a place of worship for this immediate locality has been supplied by a wooden structure, known as the "Crinoline Church," which appellation was popularly bestowed in consequence of its circular form. This temporary church afforded accommodation for about 600 people; but the growing population of the neighbourhood has called for more extended means of public worship, and it was determined to build a church capable of containing between 1,500 and 1,600 persons. Only a portion of the entire plan, however, is to be carried out in the first instance. A chancel and nave are to be erected, and these will give about the same number of sittings as the present building, while the north and south aisles are to be added as the liberality of subscribers warrants the outlay. The plans are furnished by Mr. Hellyer, and the contract has been taken by Mr. Lawrence.

Alvechurch.—The chapel-of-ease at Hopwood, in the parish of Alvechurch, has been opened for divine worship. The site is a piece of ground by the side of the Birmingham turnpike-road, and was given by the Ecclesiastical Commissioners; and the fund raised for the erection of the chapel was largely augmented by gifts from the Worcester Church-building Society, and from private individuals. The building is from a design furnished by Mr. Robinson, of Leamington, architect; the builder being Mr. Hardwick, of Birmingham. The chapel is simply a room 60 ft. long by 20 ft. wide, divided into nave and chancel. It is built of deal, painted marone, and lined with canvas, which is coloured and stencilled in pattern. The chancel is covered with paper specially designed by the architect. The roof is pitched and covered with slates; and there is ventilation by means of two dormer windows. At the north end is a vestry, and at the south-west the entrance-porch. The sittings are free, and there is accommodation for about 150.

Neath (South Wales).—The foundation-stone of a new church, dedicated to St. David, has been laid, on a site presented by Mr. Howel Gwyn, of Duffryn, by the V.W., Theodore Mansel Talbot, D.P.G.M. of the Ancient order of Freemasons. The church is to be in the Gothic style, and to consist of a nave, two aisles, two transepts, an apex, and a tower. It is to afford accommodation for 1,200 persons. The building has been designed by Mr. John Norton, of London. The estimated expense is 6,200*l.*

Liverpool.—Dr. M'Neile has laid the foundation-stone of a new church, to be called St. Silas's, which is being erected at the expense of the congregation of St. Paul's, Prince's Park, in High Park-street, Liverpool. The building is to hold 1,000 persons, and will be a structure in the Decorated style, with tower and spire at the south-west angle. The spire will be 125 ft. high, and the whole of the external part of the building will be faced with Yorkshire stone and Stourton dressings. The cost, exclusive of the land, will be 5,000*l.* The architect is Mr. C. E. Grayson, and the builders are Messrs. Nicholson & Eyre.——The church within the walls which surround the Liverpool workhouse, destroyed by fire in 1862, has been replaced by a new building, or rather has been restored, from plans furnished by Mr. Wylie, the parish surveyor and architect, and the contractor was Mr. E. Hughes. The lower walls of the old building were retained, but in the new edifice a stone spire has been substituted for the wooden slated one of the old building. The galleries have not been rebuilt, so that the iron columns have all been removed. There are no pews, the seats being all open, and provision has been made for heating the building by the circulation of hot water through four double tiers of iron pipes, the boiler being fixed in the school-room underneath. The ventilation has been improved by shortening the building, and so leaving a clear passage 15 ft. wide between it and the dormitory. The organ has been furnished by Messrs. Gray & Davidson, of London, at a cost of 300*l.*, exclusive of the case. The church, as restored, will seat about 1,000 persons. It has been opened for divine service.

Leeds.—The foundations of a church of considerable size have been laid in the park of Kirkstall Grange, the seat of the late Mr. W. Beckett, now the property of Sir Thomas Beckett. It is intended to be the church of a new district in the old parish of Leeds, and is to be built and endowed at the joint expense of Mr. E. Denison, of Doncaster, and Mr. E. B. Denison, Q.C., the latter of whom has made the designs for it, with the assistance of Mr. W. H. Crossland, of Leeds, architect. The foundations cover 140 ft. in length and 63 ft. wide, exclusive of the porch, and comprise a nave and aisles of six bays, with a five-sided apse and periapse, the aisles being carried round the chancel, and a tower 30 ft. square at the base, which is shown in the plans with a spire 180 ft. high. Mr. Denison has also purchased a Baptist chapel, of better architecture than common, which had to be removed for the new infirmary, and he and Sir T. Beckett are rebuilding it as a church in a low part of the town much in want of church accommodation, near the schools which were lately built by the Beckett family on their property in the same locality.

York.—St. Cuthbert's Church, after having been closed for a short time for necessary repairs, has been again opened for divine service. The reredos, which formerly blocked up the east window, has been taken down, and a window, with stained-glass border and a centre of cathedral glass, has been substituted. The roof of the building has also been strengthened, and made more ornamental. The wide centre aisle has been removed, and two aisles made, thus giving

three blocks of pews, increasing the number by fifteen. These pews are now made of stained wood. The lighting of the church has also undergone some change, and it is now effected by two star pendants. The stoves have been taken away, and a hot-water apparatus, by Messrs. Longbotham, of Leeds, will in future be used to warm the church. An oak railing has been substituted for the old black ones of the communion table. The work has been executed by Mr. Brown, of York.

Percy Main (*Northumberland*).—The Bishop of Durham has had again to discharge the duty of consecrating a new church, built by the Duke of Northumberland, in a district where it was very greatly needed,—that of Percy Main. The style is Early English. Like the other two churches which have been erected at the cost of the duke, —those at North Shields and Whitley,—the Church of St. John is plain and unpretending in appearance. Exteriorly, it shows the outlines of a nave, with a double bell-turret at the west, and a chancel at the east end, and north and south aisles. The extreme length of the building is 98 ft., of which 68 ft. belong to the nave, and 30 ft. to the chancel. The extreme breadth over both aisles is 49 ft., but the chancel is only 18 ft. 6 in. in breadth. Each aisle is separated from the nave by an arcade, consisting of four fine pointed Gothic arches, which have a span of 12 ft. 5 in., and spring from dressed stone pillars. The pillars are 7 ft. 5 in. from the floor to the capital, and the total height of the arch is 17 ft. Above these arches run the clerestory windows, eight in number, on each side. At the west end of the church there are two lancet windows, underneath which are four small Gothic windows. The height of the roof of the nave is, to the ridge, 40 ft., and to the top of the bell-turret, 54 ft. The bell-turret is surmounted by a gilt finial. In the latter are placed two bells, each of which weighs 2 cwt. The chancel is separated from the east end of the nave by an arch, 23 ft. 5 in. in height, and 14 ft. in width. The chancel is 32 ft. in length by 18 ft. 6 in. in breadth, and it is separated from the aisles by a double arch on each side. The altar is placed at the east end of the chancel, from which it is partitioned off by a light wooden rail, supported by iron standards. The east window consists of three lancet lights, divided by two slender pillars. The centre compartment is filled with a stained-glass window, representing the figure of St. John, with the ducal escutcheon underneath. This has been got up as a tribute to the Duke from the congregation, and it has been executed by Mr. H. M. Barnett, of Newcastle. The church possesses accommodation for about 600 sitters, the pews for whom are made of varnished deal. The heating apparatus consists of a large Gill stove. The architect was Mr. Salvin, of London, whose design, owing to the favourable circumstances of the case, has been carried out in its integrity. The builder was Mr. Smith, of London; and Mr. Chapman clerk of the works. Messrs. Twizell, of North Shields, have supplied the gas-fittings; and Mr. Stewart, of Sheffield, the heating apparatus.

DISSENTING CHURCH-BUILDING NEWS.

Leighton Buzzard (*Beds.*).—A new Baptist chapel has been opened here. The cost of the new chapel is stated to be 900*l.*, and of that sum 500*l.* have been raised, and more than 200*l.* more promised. The several parts of the work of the chapel have been executed by tradesmen of the town, except the carving, which has been executed by Mr. T. Margetson, of Bristol. The builders were Mr. John Nash and Mr. William Groom. The glazing, painting, &c., have been done by Messrs. J. & R. Purser, and the gas-fittings were provided by Mr. Sharp. The seats will contain 400 hearers.

Somerleyton (*Suffolk*).—It having been decided by the Wesleyan New Connexion to build a chapel in this parish, their views were forwarded to Sir Francis Crossley, Bart., M.P., who liberally gave a piece of ground, adjoining Messrs. Lucas's brickyard, together with a donation in money. The foundation stone of this building has been laid, and the works are now progressing. The building is Gothic, in the form of a parallelogram, sufficient space being left to enlarge the chapel at any time. Yellow stocks are being used externally, and relieved with red bands and partly coloured bricks in the arches. The side walls are pierced with couplet windows, and there are three-light windows in the gables. The roof will be open, with stained and varnished timbers, and plastered on the under side of the rafters. Open benches are introduced with cast-iron standards, and stained and varnished seats, with rack rails. The architect engaged by the trustees is Mr. W. Oldham Chambers, of Lowestoft; and the builders are Messrs. Jackson & Rounce, of Blundeston.

Manchester.—The foundation stone of a new Primitive Methodist Chapel and school has been laid in Bradford-road. The chapel will be plain in design, and will accommodate 200 people, and the school-house adjoining, 180 scholars. The total cost is estimated at 800*l.*, about 150*l.* of which have been subscribed. The architect is Mr. T. Waddington; and the contractor, Mr. Marshall, of Salford.

Withington.—The corner-stone of a new Wesleyan Methodist Chapel has been laid at Withington, according to the *Manchester Courier*. It is proposed to expend about 3,000*l.* on the building and land. The chapel is to be built of stone, in the Gothic style. The nave, exclusive of the apse, will be 54 ft. by 40 ft.; and the transept, which will be 50 ft. by 26 ft., will, for the present, be separated from it by means of a wall, and this portion of the building will be applied to school and other purposes. There is to be a gallery across the front, or entrance end of the chapel: there will be a groined roof and stained glass windows, and the building will accommodate about 700 persons when the whole of the interior is thrown open. At the outset, provision will be made for 470, including 100 children. The building is to be erected on the plot of land near the toll-bar.

Stockport.—A new Congregational church is about to be erected here. The congregation at Orchard-street Chapel having some time ago received a grant of 1,000*l.* from the Lancashire Bicentenary Fund towards a new church, on condition that it was erected by August 1865, measures were taken to forward the project, and a desirable plot of land for the structure was selected on Wellington-road South for the new edifice, the school and missionary operations to be continued in the old chapel. Plans were obtained, and the required sum was ascertained to be 4,500*l.*, towards which 3,115*l.* have already been subscribed. The foundation stone of the new church will shortly be laid.

Southport (*Lancashire*).—The New Wesleyan Chapel, Duke-street, Southport, called Trinity Chapel, has been completed, and opened for divine worship. The total cost of the edifice, exclusive of parsonage-house,—the latter of which is not yet completed, is estimated at nearly 9,000*l.* The chapel is of the Early Lancet period of architecture, and has been built from the designs of Messrs. Starkey & Cuffley (now Cuffley & Horton), of Manchester. The plan comprises clerestoried nave and aisles; transepts and apsidal chancel; with tower at north-west angle, and porch on south side, and a chamber for warming apparatus under chancel. The exterior is executed in Burnley wall stone and Hoghton ashlar, and the interior arches, labels, and window dressings generally, of Hoghton stone. Carved crosses surmount all the gables, and the chancel is terminated with a gilt cross. The total interior length is 114 ft. 6 in.; width across the aisles, 57 ft.; and the cross transept, 77 ft. The entrances are through the tower and porch, the former being enriched by shafts, with polished capitals and arch mouldings, decorated with the dog-tooth. Side entrances and inner lobbies to both tower and porch are also provided. The separation of the nave and aisles is effected by stone arches, supported on 12 in. circular polished Peterhead granite columns, surmounted on chamfered square Burnley stone bases, which stand a little above the pewing, so as to leave the entire columns exposed to view. Polished serpentine marble shafts, with foliated capitals and corbels, carry the principals of chancel, the roof of which is panelled for decoration. The whole of the roofs are boarded, and all the timbers and boarding exposed. In the nave and transepts the roof is ceiled across at the collar, with pierced quatrefoiled boarding running down the centre, and immediately above with a wooden tube for ventilation. The whole of the pewing is executed in pitch pine, has sloping backs, and is calculated to seat 775 persons inclusive of children. The pulpit is of Caen stone. The whole of the windows have been fitted with stained glass of geometric design, by Messrs. Edmundson & Son, of Manchester. The aisles, chancel, and several entrances have been laid by Mr. Oakden, of Manchester and Liverpool, with encaustic tiles manufactured by Messrs. Maw, of Broseley, and Mr. Godwin, of Hereford. The iron gates and lamps to the several carriage entrances, &c., are of wrought-iron, by Mr. Skidmore, of Coventry, who has also carried out the whole of the gas-lighting, which is effected by parti-coloured pendants suspended over the centre of each archway, and so leading the eye toward the principal and central feature, the apsidal chancel. Mr. Skidmore has also executed the communion railing. The whole of the works have been carried out by the following contractors, namely:—The stonework by Messrs. Ellis & Hinchcliffe, of Manchester; brickwork by Mr. Riding, of Southport; warming apparatus (hot-water principle) by Mr. Wilson, of Manchester; and the rest of the work under the superintendence of Messrs. Bowden Edwards & Forster, of Manchester. Mr. Bonehill, of Manchester, executed the carving. The building generally has been superintended by Mr. Ogg, as clerk of the works.

Miscellanea.

Presentation to a Foreman.—A silver goblet, subscribed for by the workmen of Mr. W. Higgs, contractor, arsenal, Woolwich, was presented to Mr. Thomas Seward, foreman, on the 17th ult., at the Wheatly Arms, Erith, at a dinner which was given for the purpose.

"Mind the Paint."—At the late Swansea County Court (before Judge Falconer), the Rev. Rees Price, vicar of St. David's, Brecon, sued Mr. John Russell, a fishmonger at Swansea, for 25s., plaintiff's wife having had her dress damaged by some coal-tar which had been newly laid on the outside of defendant's house. The evidence was lengthy, but satisfactory, and his Honour gave judgment for the amount claimed. Defendant thought he was entitled to the old dress, but the Court ruled otherwise.

The Vandals at Malines.—During a recent visit to Malines, I was not a little astonished at an act of vandalism now in course of perpetration. The grand old tower of the cathedral is receiving a coat of *white paint*. Those who remember its venerable, time-coloured aspect, will appreciate this great mischief. There is a "Royal commission of monuments" in Belgium, and this painting process must be done with their sanction, if not by their direct order. Surely here is a case for protest by influential English Architects and artists; for, to some extent at least, art monuments are the public property of the civilized world. Malines collects, with much pains, an exhibition of Mediæval art; and, at the same moment, destroys her finest Mediæval monument.—J. D. Crace.

Watering Window Plants.—Miss Maling, the authoress of "Flowers for Window Gardens in Town and Country," thus writes:—"There is one universal law as to watering plants which a great many people entirely neglect. The neglect of this one rule causes more blight and more unhealthy plants than perhaps any single thing that can be named besides. I mean the excellent rule of watering with warm water,—always rather warmer than the soil the plants are growing in. People must surely see the check and injury it must be to plants always to get cold food. The organs of tender plants are extremely delicate; and when they are wanted to digest their food, it is a bad plan surely to paralyse them with cold. If we feed them, on the other hand, with food a little warm, they are stimulated at once to make the most of their meal. Another important branch of the watering question consists in the washing that all house plants require.

The French and English Workmen.—On Wednesday evening a public meeting of the working men of London was held in St. Martin's Hall, Long Acre, to receive a deputation from the working men of Paris, with a reply to the address lataly sent to the French workmen by the workmen of England, with the object of promoting a more close and friendly feeling between the working men of the two countries. Professor Beesly occupied the chair. The French delegates were MM. Tolain, Linousin, and Perrachon. The following resolution was passed:—

"That this meeting having heard the reply of our French brethren to our address, we once more bid them welcome; and, as their programme is calculated to benefit the labouring community, accept it as the basis of an international association; and hereby appoint a committee, with power to add to its number, to draw up the rules and regulations for such an association."

Leigh Woods sold for Building Sites.—It is stated by a Gloucester paper, that Sir Greville Smith, bart., of Ashton-court, has sold Leigh Woods to a London contractor for 50,000*l.* The contractor has drawn a plan which contemplates the erection over 118 acres of some 700 or 800 houses, many of them low-priced. The owners of property at Clifton are alarmed at this; and as the contractor is willing to be quit of his bargain for a profit of 10,000*l.*, an attempt is being made to purchase the estate by means of a joint-stock company (limited). The company, to repay themselves, will put up some 350 or 360 ornamental villas.

Health in the City.—Dr. Letheby's recent report of the health of his district shows that, in the course of the last seven weeks, the number of deaths and the number of births were exactly the same; viz., 387 births and 387 deaths. Taking the average of the last eight years, the death-rate is large. The average is 344. The deaths of children of less than five years of age were nearly half of the whole number, viz., 192. There were seventy-one deaths from diseases of a tubercular character, twenty-nine from inflammatory affections of the lungs, and, exclusive of the infantile diarrhœa, 81 diseases of the zymotic class. The sanitary staff of the City deserve praise for their exertions, and their example is worthy of imitation elsewhere. Since the last meeting of the Court of Sewers, 989 houses have been inspected. Of these, 208 are marked as requiring sanitary improvement. The markets and slaughter-houses had been inspected, and the enormous quantity of 41,790 lb., or nearly 19 tons of meat, condemned as unfit for human food.

The Silenus of Pompeii.—A correspondent writes from Naples,—The Silenus discovered at Pompeii may be regarded as an excellent version of the constant companion of Dionysus. Painting, mosaic, sculpture, poetry, have never drawn a more characteristic picture of him. He is a jovial old man, with a bald head, a pug nose, fat and round like his wine-bag; who could not trust his own legs; but he is not supported by other satyrs, nor by an ass. In every other respect he is portrayed as resembling his brethren, in their love of sleep, wine, and music. The Pompeiian Silenus is evidently inebriated, and raises with his left hand a snake, which, turning in two spirals, twists itself, and probably supported a glass pot, the remains of which were found near the statue. Opinions are divided on the peculiar name of this Silenus. Cav. Giulio Minervini believes that it is a *Silenus orgiaste*, and he supported his opinion by several authorities: the Cav. Quaranta believes that it is an *enchanter Silenus*. But whichever may be the just opinion, the Royal Neapolitan Archæological Academy has decided on publishing the memoirs of both these authors.

The 1862 Exhibition Building.—In course of pulling down the building at South Kensington, the large brick arches at the east and west ends have been left for some time standing alone. One of these disappeared on Saturday last. A party of Royal Engineers had been employed for a few days in lodging charges of powder to demolish the arch at the eastern end. The arch was of brickwork, in Portland cement, semicircular in form; the span 59 ft. It was built in three bands, each about 2 ft. 6 in. deep, so that the total depth of the arch was 7 ft. 6 in., the width of the top band being 6 ft., and that of the lower one 3 ft. Mr. Freake, who has bought the material of the building, and is pulling it down, willingly agreed to the proposal that it should be experimented on, and on Monday afternoon the Sappers commenced work by boring four holes in each haunch of the arch to receive small charges of powder. This method was adopted as being safer than the more expeditious plan of using a single large charge at each haunch, which would probably have caused some of the bricks to fly in a dangerous way. The total amount of powder used was 19 lb. Half-past twelve on Saturday having been fixed upon as the time for the explosion, and the part of the Exhibition-road in front of the arch having been cleared by the police in case of accident, the officer in charge of the party fired the charges simultaneously by means of an electric machine. The haunches of the arch, it is stated, were broken and slightly pushed out, the crown opened, and the parts fell together, separating into several pieces in their fall. The remaining arch will probably be blown up this Saturday afternoon.

South Kensington Museum.—A collection of oil-paintings, of the Dutch school, fifty-six in number, has been lent for exhibition by Mr. John Walter, M.P., and is now arranged on the walls of the gallery from which the Mulready pictures were lately removed.

New Art-Exhibition at Birmingham.—A notice appeared of a proposed new exhibition of artists, to be held in the old rooms of the Society of Artists, in Temple-row, and having for its object the establishing of a central situation for the exhibition of artists' works the whole year round, the payment of the artists on the day of sale, and a facility for artists to exchange or add to their exhibited works as often as they please. An acting committee has been formed, a secretary appointed, and a hanging committee organized.

Schools of Art.—The prizes awarded at the last annual exhibition of the Yarmouth school have been distributed by the mayor, at the town hall. Thirteen students received medals or books, and two pupil teachers honorary rewards. There were also prize-holders to the number of 141 from the following schools:—British, 74; Charity, 19; Hospital, 15; Priory, 14; St. Peter's, 11; Primitive Methodist, 8. The mayor, in the course of his remarks, said that a more than usual number of prizes had been won this year, though the standard of merit had been raised.——The medals and prizes of the Reading School have been awarded. This school is now considered to be in a flourishing condition.

A Kensington Museum in Paris.—The museum and library of the Union Centrale des Beaux-Arts appliqués à l'Industrie has been opened at No. 15, Place Royale. It is an imitation of the Kensington Museum, and will be open gratis for a time. The first *salle* contains the gifts received by the society: in the second are arranged the artistic curiosities which have been lent by private individuals,—Eastern ewers of marvellous workmanship, ancient and very rare pottery, exquisite specimens of Guipures and Italian lace, Gobelin tapestries, &c. This collection will be changed every three months. The third *salle* contains books and prints, treating of and illustrating various branches of industry. Cases containing specimens of the materials used in each department of trade are so arranged that the student has easy access to them.

Public Park for the North-east of London. At an adjourned meeting of vestrymen for the parish of St. Leonard, Shoreditch, the following resolution was passed by a large majority:—"That a communication be made to the vestry of Hackney parish, and also to the Board of Works for that district, asking if they are prepared to co-operate with this vestry in making some effort to get the sanction of Parliament or otherwise, to enclose, plant, and maintain the London-fields as a public park and place of recreation, upon the basis of this parish bearing part of the costs which may have to be borne by the local boards, and whether either or both parties will appoint a committee to meet a committee of this parish upon the subject."

The Palmerston Hotel, Kilburn.—The foundation-stone of the Palmerston hotel, Kilburn, has been laid at Edgware-road station of the Hampstead and North London Railway. The hotel is situate at the entrance of the West-end Park estate, from the eastward side of the Edgware-road, forming the corner of the road to be designated the "Palmerston-road," comprised of semi-detached villa residences, and upwards of a mile in length. The design is that of Mr. J. Parker, architect; and the lessee and builder is Mr. E. Bannister.

Salford Albert Memorial.—It was long since determined to erect a memorial statue of the Prince Consort in Peel Park, to be a companion statue to that of the Queen already placed there. Mr. Matthew Noble, the sculptor, is preparing the statue, which it was expected would be completed by the end of September. It is of white Sicilian marble, and represents the Prince in his robes as Chancellor of the University of Cambridge. The site selected is a spot exactly opposite the statue of the Queen. The pedestal will be of grey granite, and it has been determined by the committee having the arrangement of the matter, as the pedestal of the Queen's statue, which is of white marble, requires to be taken down and refixed, to have it also faced with grey granite, to match with the other.

Fall of another French Suspension Bridge. The suspension-bridge over the Oise at Verberie gave way recently, and a loaded waggon with five horses and the waggoner were precipitated into the river. The bridge has been built twenty-eight years, and must have been in a very bad condition, as the weight of the waggon under which it gave way was only from 5,000 to 6,000 kilogrs., which is much less than the limit of weight fixed by the engineers.

New Boring Machine.—Mr. Hosking's machine for boring rocks, so as to lessen manual labour in this direction, is thus described by the inventor:—"This machine may be made with either one or two borers, and these so arranged that they can be adjusted to bore in any direction, either horizontally, perpendicularly, or at any angle that may be required. It is arranged that the borer can be taken out of the hole for changing without altering the angle or position of the machine. The model is not provided with a fly-wheel, but this must be applied in practice, and will thereby insure a uniform and steady motion, also preventing the continuous shocks perceptible in the model.

Sharpening Edge Tools.—We translate the following from a German scientific journal, for the benefit of our mechanics and agricultural labourers:—"It has long been known that the simplest method of sharpening a razor is to put it for half an hour in water to which has been added one-twentieth of its weight of muriatic or sulphuric acid, then lightly wipe it off, and, after a few hours, set it on a hone. The acid here supplies the place of a whetstone, by corroding the whole surface uniformly, so that nothing further than a good polish is necessary. The process never injures good blades, while badly hardened ones are frequently improved by it, although the cause of such improvement remains unexplained. The mode of sharpening here indicated would be found especially advantageous for sickles and scythes."—*Mark Lane Express.*

Gas.—It is stated in the *Star* newspaper, that the metropolitan gas consumers may shortly expect a general reduction in the price of gas, under the provisions of the Metropolis Gas Act, 1860; most of the thirteen London gas companies, having, by the saving in expense of working, arrived at so good a financial state as to render a reduction in price imperative, under the provisions of the Act. It is generally understood, that had the several metropolitan vestries put the Act in force, this reduction must have been made a year ago.——The accounts of the thirteen metropolitan gas companies presented to Parliament, in pursuance of the Metropolis Gas Act, 1860, show a total capital subscribed and borrowed of 5,684,987*l.*, upon which interest and dividend were paid amounting to 585,679*l.*,—a total result in excess of 10 per cent. The capital subscribed, exclusive of borrowed, is 5,015,562*l.*, upon which 531,227*l.*—nearer 11 per cent. than 10—was paid; but the accounts also show a total of 147,000*l.* in reserve, not carried to dividend. Herein the public are deeply wronged, as it shows an excess of 12 per cent. earned, upon which an immediate reduction in price ought to have taken place. It is understood that the whole of the companies continue to act in concert. The formation of a consumers' association to enforce action from vestries and companies is urged by "A Large Consumer," in the paper named. He says he has no doubt that an examination of the accounts would show that the public are now paying 200,000*l.* per annum in excess of the price authorised by Parliament solely through the supineness of the vestries. ——The new lease recently granted by the Board of Health to the Newbury Gas Company, now comes into operation, and henceforth the price of gas to local private consumers will be reduced from 7s. to 5s. 6d. per 1,000 cubic feet. There will also be a reduction in the public lighting.——The price of gas in Ashton being 4s., and that of Manchester 3s. 2d., with a prospect of its further reduction in a few years to 2s. 6d., dissatisfaction with the price at Ashton is manifesting itself, and some remarks on the subject have been made in the town council.——The reduction in price by the Birmingham Gaslight and Coke Company has been followed by an increase in consumption; but, from Parliamentary expenses and other reasons, the legal maximum dividends, though they will be paid this year as usual, require aid from the reserve fund on this occasion.

Gas-lighting at the Bath Meeting.—Professor William B. Rogers, of Boston, Massachusetts, exhibited a new arrangement for lighting a gas-burner or many gas-burners by an electric spark, formed by drawing out a stopper of vulcanized iron. The friction sends a current sufficiently strong for the purpose.

Value of Property in the Metropolis.—At the Sheriffs' Court, Red Lion-square, lately, in a compensation case, Ludell *v.* the Metropolitan Railway, the question rose as to the value of some land in Greenhill-rents, on which two houses had been built and let at 40*l.* a year. The property had greatly increased in value in and near the City. The land would now let at 90*l.* a year ground-rent; and on an outlay of 2,000*l.* in building warehouses, a rental of 250*l.* a year would be obtained. The jury, under the presidency of Mr. Wordsworth, Q.C., as assessor, awarded 1,420*l.* Mr. Keene, Q.C., with Mr. Matthews, were for the claimant; Mr. Serjeant Parry and Mr. Gadsden for the company.

Proposed Improvement: Fleet-street.—At the last meeting of the City Commissioners of Sewers, Mr. Haywood laid before them a proposal "to form a circus, 160 ft. in diameter, at the junction of Ludgate-hill, Bridge-street, Fleet-street, and Farringdon-street; to make a resting-place in the centre of the circus, and thus to cause the traffic going in any direction to travel round it to get to the opposite side. The obelisks are to be set back, resting-places are to be formed round them so as to facilitate the crossing of foot-passengers, and further to regulate the carriage traffic." The project was referred to the "Improvement Committee" for a report.

Fires.—Seventeen houses in the small town of Thaxted, Essex, have been destroyed by fire, originating in a cottage where children were playing with lucifer matches. The damage is estimated at 2,000*l.* to 3,000*l.*——The Surrey Rice Mills, in the Surrey Canal Docks, have been totally destroyed by fire. The mills were extensive, and the loss is estimated at 30,000*l.* "Friction of the machinery, or spontaneous combustion" is blamed for the occurrence. Fifty years ago these mills were burnt down.——The Central Telegraph Station, in Threadneedle-street, City, has been gutted by fire, and the premises considerably damaged. Apparatus was speedily provided to replace that destroyed.

St. Benet's, Gracechurch-street. — Under the arrangement now nearly perfected for uniting the parish of Allhallows, Lombard-street, with the parish of St. Benet, Gracechurch-street, the church of the latter parish, at the corner of, and narrow entrance to, Fenchurch-street, will be taken down, and the site offered to the Commissioners of Sewers for public improvements, at a price to be agreed upon, subject to the consent of the Lord Mayor and the Bishop of London. Should the Commissioners of Sewers decline to purchase, other provision is made for the sale and taking down of St. Benet's Church. Out of the net proceeds to be realised by the sale of St. Benet's Church and site, 1,500*l.* are to be applied towards providing a parsonage-house for the rector of the united parishes. A sum not exceeding 4,000*l.* is also to be set aside for the purpose of repairing and repewing the church of Allhallows, Lombard-street; and, out of the net proceeds of the said sale a new church is to be built, and a new parish formed in a densely peopled part of Stepney, to be called "St. Benet's, Stepney," and endowed with at least 300*l.* a year.

A Lady Draughtsman locked up in Christchurch Church.—A lady, a stranger to Christchurch, visited the Priory church for the purpose of taking drawings of various portions of the interior. She told the person in charge of the church, on his showing her a room popularly known as "Oliver Cromwell's Harness-room," which is approached by a very awkward circular staircase, not to forget her; and she remained there while he went about his customary duties; on the completion of which he went home, leaving the lady locked in, having entirely forgotten her. Some alarm arose as to her whereabouts among her friends, and eventually some gentlemen volunteered to search for her. The church, which was known to be her favourite resort, was thought of; and, on rousing the verger, who had gone to bed, he coolly remarked "She *was* there and I suppose she's there now." Lights were procured, and the lady was found in the "Harness-room," quietly trying to compose herself to sleep.

More Earthquakes.—Of late there have been several slight shocks of earthquake; and on Sunday night, or, rather, on Monday morning early, a shock of considerable distinctness was felt in the north of England,—at Leeds, Skipton, Rochdale, Manchester, and other places. The tremor even awoke people from sleep in some instances. It is rather curious that it was nearly at the same period of the twenty-four hours when the first shock of recent times took place. A similar shock occurred at Glasgow upwards of twenty years since, also through the night. But perhaps it is only because everything is then quiet that such tremors are felt, while they may also occur unnoticed at other times.

Jerusalem.—A sergeant and four privates of the Royal Engineers sailed from Southampton last week for Alexandria, on their way to Jerusalem. The *Athenæum* says,—They are going out to make an exact topographical survey of the city and neighbourhood, including all its more famous hills and valleys. It sounds strange to hear that so necessary a work has never yet been done. We have a few elevations, a few sections; but the figures and plans of travellers differ very considerably one from another. Yet the most important questions often turn upon the relative heights of Gareb, Zion, and Bezetha. We hope that in this new effort to extend our knowledge of holy sites, every care will be taken to allay the natural jealousy of the Turkish Government.

Views of the Church of St. John, Ormond Street.—An interior and exterior view of the handsome Roman Catholic church of St. John of Jerusalem, erected, together with a hospital, in Great Ormond-street, Bloomsbury, at the cost of Sir George Bowyer, bart., has been published by Messrs. Day & Son, from the careful and effective drawings of Mr. John Henry Metcalfe. The engraving has been executed by Mr. Orlando Jewitt, who has evidently spared no pains to produce a satisfactory result. Admirers of Sir George Bowyer's munificence, as well as collectors of views of London buildings, will be glad to have these prints, which are published side by side on one sheet. The church is Italian in style, and was erected, as our readers may remember, from the designs of Mr. George Goldie.

Board of Health Works at West Ham.—From a printed statement, drawn up for the past year by the local surveyor, Mr. J. G. B. Marshall, it appears, that forty miles of sewers and pumping works have been executed, at a cost of 6,000*l.*; 830 public lights provided, at a cost of 4,500*l.*; fifteen miles of carriage-ways and forty miles of footways maintained, at a cost of 1,600*l.*; and that in all, 15,732*l.*, payable from annual rating, have been expended on such works. Seven thousand houses and other premises have now been connected by drains with the public sewers, at a cost of 70,000*l.*; and works have been ordered by the Board to the amount of 22,452*l.*

Galvano-plastic Copy of Trajan's Column in Paris. — In the newly-opened wing of the Louvre gallery, on the ground-floor, devoted to statuary, a copy of Trajan's pillar at Rome has been placed, in six cylindrical pieces, with *fac-similes* of all the bas-reliefs in metallic electro-deposit resembling bronze. The success of the moulding has induced the Government to order publicity to be given to the means by which this success has been obtained. The experiment is the first of its kind. The surface of the column, being first of all moulded in plaster, was afterwards surrounded by a frame-work of zinc, and then covered with a coating of gutta-percha, the latter material having been submitted to a tolerable amount of heat in a stove, and boiled in a caldron, until it had become perfectly liquid. After this process it was left to cool upon the plaster moulding, which latter had to be knocked away piecemeal, and with the greatest care. The entire work in gutta-percha was then coated with graphite powder, then covered with the copper wire destined to convey the current into the hollow portions of the model. The work was then placed in a wooden case, surrounded by a galvanic apparatus communicating with the wires. Water, saturated with sulphate of copper, introduced into the wooden case, enabled the electric power to complete the work, which occupied about five-and-twenty days. The removal of the gutta-percha mould was easily effected by means of warm water alone. The process was invented by M. Oudry, the metal-founder. A commission has been named for an exploring expedition to Asia Minor, for thus securing the bas-reliefs and inscriptions still found there, and fast mouldering to decay.

Organ Building.—A writer in the *Dundee Advertiser*, who happened lately to visit the organ manufactory of Messrs. Forster & Andrews, gives the following list, made out at his request, of the principal organs now building by them, with their dimensions:—55 stops, for Corn-exchange, Dundee, four sets of keys; 10 stops, for Baptist Mission, Demerara, West Indies, one set of keys; 29 stops, for St. Wilfrid's Catholic Church, York, three sets of keys; 25 stops, for St. Matthew's Church, Liverpool, two sets of keys; 12 stops, for Mrs. Shepherd, to be erected in the Memorial Church, at Appleton, one set of keys; 28 stops, for the Independent Chapel now being erected in Castlegate, Nottingham, two sets of keys; 30 stops, for St. John's Church, Hull, three sets of keys; 16 stops, for St. Earth Wesleyan Chapel, Cornwall, two sets of keys; 28 stops, for Lochee Catholic Church, near Dundee, three sets of keys; 27 stops, for New Wesleyan Chapel, Blackheath, London, two sets of keys; 20 stops, for St. Michael's Church, Louth, two sets of keys; 15 stops, for Southwick Church, Sunderland, two sets of keys; 21 stops, Christ Church, Newcastle, two sets of keys; 12 stops, Tornton Church, York, two sets of keys; 24 stops, Hill Chapel Longport, Burslem, two sets of keys; 10 stops, Worsbro' Dale Church, one set of keys; 16 stops, St. Thomas's Church, Bradford, two sets of keys; 15 stops, Trinity Church, Gainsbro', two sets of keys; 18 stops, Ryde, Isle of Wight, St. James's Church, two sets of keys; 20 stops, Cambridge, All Saints' Church, two sets of keys; 25 stops, Wesleyan-place Chapel, Keighley, two sets of keys.

TENDERS.

For the second section of St. Scholastica's Retreat, Upper Clapton, for Miss Harrisson. Mr. E. Welby Pugin, architect. Quantities prepared by Mr. S. Marples:—

Smith & Son	£4,894 0 0
Cowland	4,469 0 0
Kelly	4,400 0 0
Orborn (accepted)	4,330 0 0

For the erection of the first portion of St. Augustine's new Catholic Church, Hoxton, for the Very Rev. Father Crane. Mr. E. Welby Pugin, architect. Quantities not supplied:—

Smith	£2,200 0 0
Wellman	1,990 0 0
Williams	1,700 0 0
Simpson	1,470 0 0
Oxborn (accepted)	1,330 0 0

For the erection of distillery, Victoria-street, Westminster, for Messrs. Vickers. Messrs. Mayhew & Calder, architects:—

Anson	£20,577 0 0
Jackson & Shaw	19,976 0 0
King & Sons	19,669 0 0
Downes	19,200 0 0

For the erection of a small detached villa at New Malden, Surrey, for Mr. Duck. Mr. G. Welsh, architect:—

Parker	£500 0 0

For building a boiler shop for Messrs. Robey & Co., Perseverance Iron Works, Lincoln. Mr. Watkins, architect:—

Wallis & Son	£340 0 0
Styles	836 0 0
Jackson	820 0 0
White	790 0 0
Reeve	777 0 0
Huddleston (accepted)	739 0 0

For drainage of twenty-nine houses, for Mr. James Brown:—

Geary	£120 0 0 !
James	115 15 0
Hubbard	90 0 0
Salt	89 10 0
Aldous	70 0 0 !

For the erection of a laundry at Acton. Mr. J. Harris, jun., architect:—

Huggett	£795 0 0
Evans	789 0 0
Wood	787 0 0
Parsons	777 0 0

For mahogany fittings in new offices, Burton-on-Trent, for Messrs. Ind, Coope, & Co. Mr. J. Fairclough, architect.

Mason	£580 0 0
Deaville (accepted)	572 0 0

For alterations for Mr. Lee, Old-street, St. Luke's. Mr. T. J. Hill, architect:—

R. Parsons	£730 0 0
E. Parsons	730 0 0
Lamprell	729 0 0

For building new schools and church at Poplar. Messrs. Francis, architects. Quantities supplied:—

KELLY'S PRACTICAL BUILDERS' PRICE-BOOK; or, Safe Guide to the Valuation of all kinds of Artificers' Work; with the Modern Practice of Measuring, and an Abstract of the New Building Act for regulating the Construction of Buildings. Revised and Corrected by New Calculations upon the present Value of Materials and Labour. Arranged by an Architect of Experience, assisted by several experienced Measuring Surveyors. Illustrated and exemplified by Steel Engravings and numerous Woodcuts in the Text. 12mo, 5s. neatly bound.

London: published by T. KELLY, Paternoster-row; SIMPKIN and MARSHALL; and may be had of all Booksellers.

Of whom may be had, New Editions in Quarto, of the following Practical Architectural Works:—

1. PETER NICHOLSON'S PRACTICAL CARPENTRY, JOINERY, and CABINET-MAKING, Revised by GEO. GODDOLD: being a new and complete System of Lines, for the Use of Workmen; founded on Geometrical and Mechanical Principles. In 4 parts at 3s. or in boards, 30s.; containing upwards of 120 Steel Plates, and numerous Woodcut Diagrams.

2. PETER NICHOLSON'S PRACTICAL MASONRY, BRICKLAYING, and PLASTERING (revised by GEO. GODDOLD), both plain and ornamental; containing a new and complete System of Lines for Stone Cutting, for the Use of Workmen; the Examination of Mortars, Cements, Concretes, to which is added a variety of new designs for Metal Tablets, Tombs, Gravestones for Churchyards, &c.; and a description of the various materials employed. Ten Parts at 3s. or in boards, 30s.; containing upwards of Ninety Steel Plates and Numerous Woodcuts.

3. TREDGOLD and NICHOLSON'S Theoretical and Practical Treatise on the FIVE ORDERS of ARCHITECTURE; containing plain and simple Rules for drawing the several mouldings in the purest style; including an historical Description of Gothic Architecture. Illustrated by upwards of One Hundred Steel Engravings, executed by Artists of first-rate talent, including numerous Diagrams, &c. Twelve parts at 3s.; or in boards, 36s.

4. DESIGNS for COTTAGE and VILLA ARCHITECTURE: containing Plans, Elevations, Sections, Perspective Views, and Details, for the Erection of Cottages and Villas. By S. H. BOOKS, Architect. Beautifully engraved on steel, with Direction for Building, and the estimated Cost of each Edifice. Twelve parts at 3s.; or in boards, 30s.

5. DESIGNS for PUBLIC BUILDINGS, consisting of Plans, Elevations, Sections, Perspective Views and Details of Churches, Chapels, Schools, Almshouses, Gas Works, Markets, and other buildings for public purposes. By H. BOOKS, Architect. Beautifully engraved on steel. Ten Parts, at 3s. or 32s. boards.

6. THE HOUSE DECORATOR and PAINTER'S GUIDE: containing a series of Designs for Decorating Apartments with taste, and suited to the various Styles of Architecture. By J. W. and A. ARROWSMITH, House Decorators to her Majesty. Ten Parts, at 3s.; or in boards, 32s.

7. THE HOUSE PAINTER, or DECORATOR'S COMPANION: containing a complete Treatise on the Art of House Painting, Graining, and Marbling; including the Origin of Colour, the Laws of Harmonious Colouring, the Manufacture of Pigments, Oils, Varnishes, &c. By W. N. HIGGINS, Esq. Accompanied with actual Specimens of Hand-Brush Graining and Marbling. Ten Parts, at 3s.; or in boards, 32s.

8. THE ENGINEERS' and MECHANICS' ENCYCLOPÆDIA, a new and enlarged edition, comprehending Practical Illustrations of the Machinery and Processes employed in every Department of Manufacture of the British Empire. Illustrated by upwards of 2,000 Wood Engravings. By LUKE HEBERER, Civil Engineer, &c. The rapid progress of Mechanical Science has developed many of the important facts since the first publication, in 1835, of the Encyclopædia. The Inventions and Discoveries recently made have engaged the sedulous attention of the Editor; for, as the value of each is tested by experiment, a description was accordingly prepared. By the selection of new Articles, and very large Additions of old and Original Matter, this Edition has now become systematically enriched; so that it may be regarded as fully and faithfully expressing "the existing state of Engineering and Mechanism, adapted to the wants of Practical Men." In two large 8vo volumes, cloth lettered, price 30s.

Now ready, with 45 plates, imp. folio, price 2l. 2s. (postage 1s. 4d.),

EXAMPLES of BRIDGE and VIADUCT CONSTRUCTION, of MASONRY, TIMBER, and IRON; from Contract Drawings or Admeasurements of Select Works.

By W. DAVIS HASKOLL, Civil Engineer.

London: LOCKWOOD & CO. 7, Stationers' Hall-court.

Now ready, oblong 4to cloth, price 3s. 6d. (postage 2d.),

PACKING-CASE TABLES; showing the Number of Superficial Feet in Boxes or Packing-cases, from Nine Inches Square and upwards.

Compiled by WILLIAM RICHARDSON,

Accountant, Author of "The Calculator"; or, Timber Merchant's and Builder's Guide."

London: LOCKWOOD & CO. 7, Stationers' Hall-court.

KEITH JOHNSTON'S ROYAL ATLAS OF MODERN GEOGRAPHY.—"The best which has ever been published in this country."—Times. A Series of entirely Original and Authentic Maps. Imperial folio, half-bound russia or morocco, 2l. 10s. 6d.

GLASS PAINTERS.—WANTED, experienced HANDS in FIGURE PAINTING. Liberal terms and permanent employment to really competent assistants.—Apply to CLAYTON & BELL, 311, Regent-street, W.

HIGHWAY BOARD, ROCHESTER DISTRICT.—The Highway Board of the above district will, at their meeting, to be held on the 11th day of OCTOBER next, at the BULL HOTEL, Rochester, at TWELVE o'clock, be prepared to receive APPLICATIONS from CANDIDATES for the office of ASSISTANT SURVEYOR to this Board. A practical knowledge of the management and repair of highways will be requisite. The yearly salary, including travelling and all other expenses, will be 60l. per annum; but if the Board should deem it necessary that the whole time of the Assistant Surveyor should be devoted to the duties of his office, that then the salary will be 75l. per annum. He must reside within the district, at such place as the Board may approve. Candidates must state their age, and forward testimonials as to character and ability, to Mr. CHARLES MARTIN, the Clerk to the Board, at his Office in Strood, on or before the 10th day of OCTOBER next, and of whom further particulars may be obtained. Applications to be marked, "Assistant Surveyorship." Applicants for the above office must be in attendance at ONE o'clock on the day above mentioned for the meeting of the Board, or the person elected will be required to give satisfactory security for the due performance of the duties.—By order of the Board. CHARLES MARTIN, Clerk.

Strood, September, 1864

LAVENHAM HIGHWAY DISTRICT, SUFFOLK.—To SURVEYORS and OTHERS.—A meeting of the Board of the above District will be held at the Lion Inn, Lavenham, on FRIDAY, the 14th day of OCTOBER next, at ELEVEN o'clock, when proposals to receive Sealed APPLICATIONS, with testimonials, from persons wishing to become Candidates for the Offices of DISTRICT SURVEYOR, at a salary of 250l. per annum, and ASSISTANT SURVEYOR, at a salary of 100l. per annum. Candidates to appear in person. No travelling or other expenses allowed. The District consists of fifty-five parishes, about 440 miles and 103,550 acres. The Surveyor will be required to keep two horses, and the Assistant Surveyor one horse at least. Both Officers to reside in the District, and devote their whole time to the duties of their respective offices, and commence such duties on the 1st of November next. The Surveyor must provide sureties satisfactory to the Board.—By order,

RICH. NEWMAN, Clerk.

Lavenham and Hadleigh, 20th September, 1864

RICHMOND GAS COMPANY.—WANTED, by the Richmond Gas Company, 1857, Limited, a MANAGER, to take charge of the Works, from the 1st of January, 1865. His duties will be to carry on the manufacture and distribution of gas according to the most recent improvements; to utilize all the products for the advantage of the Company, and, under the control of the Directors, to take the general direction of the works, mains, and services. He must also be competent to draw plans and prepare specifications for works and gas machinery, and he will be required to reside on the premises.—Applications and testimonials, with amount of salary required, and the age and previous services of the applicants, to be sent to the undersigned, at the Office of the Company, No. 7, Ormond-terrace, Richmond, Surrey, on or before SATURDAY, the 8th day of OCTOBER next. No personal attendance in the first instance required.—By order,

JAMES DARNILL, Secretary.

Richmond, September, 1864.

ILLUSTRATED CATALOGUES, with Prices, Forwarded on application.

TWENTY-FIVE TON CRANE FOR SALE, for 80l.—Address, B. ANTHONY, Abingdon Wharf, Victoria-street, S.W.

THE PATENT UNIVERSAL CHIMNEY HEAD.

This Chimney Head has been designed for the Prevention of Smoky Chimneys and Down Draughts. The numerous side apertures are so placed as to guide the wind upwards, as it strikes the head from any quarter, thus creating a strong current and assisting the exit of the smoke through the top. The same apertures give ready egress to the wind on all sides in case of its striking downwards from above, and thus greatly diminish the danger of its passing down the chimney.

Price in Zinc..... 23s.
Ditto, Kitchen size..... 32s.
Price in Galvanized Iron 25s.
Ditto, Kitchen size..... 35s.

A Liberal Allowance to the Trade.

VALUABLE and Extensive WATERSIDE PREMISES, close to Queen street and Southwark Bridge.—To Wharfingers, Bonded Warehousemen, and Others. TO BE LET, the extensive block of newly-built WAREHOUSES, known as Queen's-dock, the Dock, having a frontage of 140 feet to the river Thames, and almost exclusive use of the Dock, where vessels of 150 tons can lay by. Further particulars of Messrs. DEBENHAM & TEWSON, 80, Cheapside.

EXTENSIVE MANUFACTURING PREMISES TO BE LET, about three miles from London Bridge, with every facility for land and water carriage. They include a square about 180 feet by 150 feet, and comprise a 4-story Warehouse, with Workshops, Chimney shaft Stables, &c. with or without one or two Acres of Land. For particulars, apply to Messrs. DEBENHAM & TEWSON, 80, Cheapside.

VALUABLE PREMISES TO LET, containing an area of 1,200 square yards, and situate one mile north of the Bank. They have lately been occupied by a Timber Merchant, who realized a large fortune in the trade; and they are well adapted for carrying on that business.—Apply to E. & W. SHURGE, Bridge Wharf, City-road, E.C.

FOR SALE, a great bargain, a portable, good, and all but new ROOM, complete, 34 feet by 15 feet; high and wide iron Room, the sides garnished glass, with blue margin. Can be seen at Chelsea. Also a very handsome Conservatory, circular roof; which is all E. D. has left, and for which no reasonable offer will be refused.—Address, E. DENCH, Pomfret Villa, Fenge.

WATERSIDE PREMISES, City-road.—Messrs. FULLER & HORSEY are instructed to LET, on LEASE, from Michaelmas next, extensive WATERSIDE PREMISES, covering a site of 21,000 superficial feet, situate on the Regent's Canal, City-road, and comprising a spacious and substantial brick built manufactory of two stories, engine and boiler houses, with 50-horse power steam engine and three corn mill boilers, range of back-yard offices, and paved yards with gateway entrance. There is a water frontage of about 207 feet.—For further particulars, apply to Messrs. FULLER & HORSEY, 13, Billiter-street, London, E.C.

WATERSIDE MANUFACTURING PREMISES, at the West end.—TO BE SOLD, the LEASE of a WHARF and PREMISES, held for an unexpired term of about seventeen years, at a low ground-rent. The above premises have been fitted with the last two years with all new machinery, which, together with the fixing stock, must be taken at a valuation. The proprietor will not leave solely in consequence of his having entered into contracts abroad which will require all his attention. Part of the purchase-money may remain on mortgage. Address, A. Messrs. Simpson & Collingwoods, Solicitors, 91, Gracechurch-street.

SPACIOUS MANUFACTURING PREMISES TO BE LET, in the Old Kent-road, within 2½ miles of London Bridge, covering an area of upwards of an acre, with ranges of substantial buildings, engine and boiler houses, stabling, &c. Excellent rail ties for land and water carriage. A lease will be granted by freeholder, and two acres of additional land can be had if required.—Apply to Mr. BENJAMIN QUINTIN, Auctioneer and Estate Agent, 33, Royal Exchange.

TO MANUFACTURERS and OTHERS. TO BE LET, with possession, at Crayford, Kent, a capital WHARF, with an extensive range of Warehouses, Stowages, Workshops, and Offices on the premises; the tide flowing up the Creek.—For particulars apply to Messrs. DANN & SON, Surveyors, Bexley, S.E.

CATTLE TROUGHS GIRDERS, CART BODIES, &c.

Omnibuses from Limehouse Station, Blackwall Railway.

GUTTA-PERCHA MILL-BANDS.—The Gutta-Percha Company beg to state that the increasing demand for the Gutta-Percha stripping for Driving Bands, Lathestraps, &c. fully justifies the strong recommendations they have everywhere received. Their durability and strength, permanent contractility and uniformity of substance; their non-susceptibility of injury from contact with oils, grease, acids, alkalies, or water; and the facility with which the only joint required can be made in bands of from 200 to 300 feet long, render them superior to leather for almost all work in factories, and decidedly more economical. Every variety of Gutta-Percha Articles, such as Tubing, Soles, Pump-buckets, Fire-buckets, Bosses, Union-joints, Flasks, Bottles, Bowls, Toilet-trays, Cartridge-trays, Galvanic Batteries, Talbotype Trays, &c. &c. manufactured by the Gutta Percha Company, and sold by their Wholesale Dealers in town and country.
THE GUTTA-PERCHA COMPANY, PATENTEES,
WHARF ROAD, CITY ROAD, LONDON.

THE PATENT CRYSTAL WINDOW BARS, adapted for domestic windows, shop fronts, conservatories, skylights, verandahs, exhibition and counter cases, aquariums, fern cases, &c. &c., combining perfect transmission of light, durability against rust or decay, and economy in the facility with which they are kept clean. MANUFACTORY at WALTON STREET.

LITTLE CASTERTON FREESTONE.
Apply, for prices, &c. to
OCTAVIUS N. SIMPSON, STAMFORD,
The Owner; and see Specimen at the Museum of Practical Geology, Jermyn-street, W.
This stone (which is a perfect oolite) is raised in blocks of any portable size, and is about 4 feet thick in the bed. It will stand ANY WEATHER, is much used for waterworks, and for the building and restoration of churches. When used as ashlar work it is not necessary to place it bed-wise. It works freely with a tooth saw, and is wrought at a cheaper rate than any stone in the Kingdom.
*** The above WEATHER STONE is used largely by London Builders.

W. & J. FREEMAN, Merchants in the various descriptions of STONE, GRANITE, and SLATE, for Engineering and Building Purposes supplied direct from the Quarries, by vessel or railway. Direct communication with the principal ports for EXPORTATION. Wharf prices and estimates for special contracts, including quarry work or other labour, forwarded on application.—Office, 57, Millbank street, London, S.W.

CAEN and AUBIGNY STONE,
FOUCARD, BROTHERS,
STONE MERCHANTS and QUARRYMEN.
Cargoes shipped to order from Caen to any port. Contracts taken for any quantities.
Office—10, Three Crown-square, Southwark.

POLISHED GRANITES.—TOMBS, COLUMNS, PILASTERS, &c. &c. in RED, BLUE, or GREY GRANITE, supplied by
WILLIAM & JOHN FREEMAN,
27, MILLBANK STREET, LONDON, S.W.

THE SCOTTISH GRANITE COMPANY (Limited) are prepared to EXECUTE ORDERS in Polished, Red, or Grey GRANITE, for Monumental or Architectural purposes. The Red Granite from their quarries is more brilliant in colour than any other known, and can be obtained in large masses. The Company are also ready to undertake Contracts for the supply of any quantity of their material, either in blocks or ready dressed, and in lengths extending to 20 feet and upwards if required.—Specimens of the stone may be seen at the Offices of the Company, 36, Cannon-street, London, E.C. and terms may be ascertained by application to the Secretary.

ABERDEEN POLISHED GRANITE WORKS.—Awarded Prize Medal in 1851, Silver Medal in 1855, and Two Prize Medals in 1862.
Red, Blue, and Grey Granite for every description of architectural construction, decoration, memorials, and general purposes.
Apply to ALEX. MACDONALD, FIELD, & CO. Aberdeen; and at London Depot, 404 Euston-road, N.W.—DAVID WILLET, Agent.

WEARDE STONE QUARRIES, LIMITED.
The Stone produced from these Quarries has been proved to be the most durable of any in the market, and can be had for Picking in any sizes; also for Macadamising.—Samples sent, with prices, on application to the Manager, E. M. CROKER, Gunnerslake, Cornwall.

PATENT CONCRETE STONE COMPANY (Limited).—The Directors have granted LICENCES for six of the Counties of Great Britain, and are prepared to entertain further Propositions for LICENCES for the MANUFACTURE of this valuable MATERIAL.—Plans for the erection of Works, and full instructions, on application.—By order,
THOMAS PIPER, Secretary.
36, Parliament-street, S.W. May, 1864.

RED MANSFIELD STONE, WHITE MANSFIELD STONE.
YELLOW MAGNESIAN or BOLSOVER LIMESTONE.
Consigned in railway trucks, direct from the Quarries, in blocks not exceeding twelve tons; or worked at the Quarries and delivered free from injury at any railway station.

MANUFACTORY and CITY SHOW ROOMS, 147, HOUNDSDITCH.

HUBBUCK'S PATENT WHITE ZINC PAINT.
By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere
ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent. Whether sold under the name of "Improved Zinc Paint," or as the number Two or Three qualities, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.
CHEAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.
EACH CASK Is STAMPED "HUBBUCK, LONDON, PATENT."
THOMAS HUBBUCK & SON,
WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

PATENT STONEWARE PAN-CLOSET.
Makers, North Devon Pottery Company, Bideford.

Price £1 12s complete.

The advantages of this Closet are:—
That the Container and Pan are made of Vitrified Stoneware, or Glazed Earthenware and not Liable to corrode.
That the flow of water is immediate, and the Pan, falling not entirely back, does not become untrapped, and no Syphon or D trap is required.
That the Lever is so adjusted that, by closing the Valve gently, the Pan is left filled with water, and no regulator is required.

The Second Portion of the Leasehold Estate.—By direction of the Executors under the Will of the late Mr. Potter, deceased.

GEO. TODD will SELL by AUCTION, at GARRAWAY'S COFFEE HOUSE, Change-alley, Cornhill, on WEDNESDAY, OCTOBER 5, at ONE for TWO o'clock, in Six Eligible LEASEHOLD PROPERTIES, namely, Nos. 2 and 3, Nos. 5 and 6, 11 and 12, Nos. 13 and 14, and No. 21, Union-road, in the parish of St. Mary, Newington.—May be viewed by permission of the Tenants; and particulars had of Messrs. LAFFEY, Esq. Solicitor, 33, Essex-street, Strand; or at the Auctioneer's Office, Battersea Bridge road, Battersea Park, S.W.

BUSHY PARK ESTATE, Upper Teddington, about 1½ on the Royal Park.—Also Nine acres of most valuable Freehold Building Land in this favourite locality.

MESSRS. GADSDEN & ELLIS will SELL by AUCTION, at the GUILDHALL COFFEE HOUSE, near the Guildhall, Gresham-street, on THURSDAY, OCTOBER 13, at TWELVE for ONE (unless an acceptable offer be previously made by private contract), FREEHOLD PROPERTIES, comprising Nine Substantially Built and Well-arranged Residences, as shown in particulars, at 81, NINE ACRES of FREEHOLD LAND, admirably situated for the erection of Villa Residences, known as Bower-house Road, Bushy Park, one of the finest roads for Building Immediately opposite are several first-class family residences, embracing highly ornamental architectural features, enclosed and finished regardless of expense, securing the superior character of the neighbourhood. A new church also is in course of erection adjoining the estate. Spring water is readily obtained, and gas and water are laid up to the property. The access is most convenient to City or West-end, by two lines of railway.—Particulars may shortly be obtained of CHARLES LAWS, Esq. Architect, 12, D'Arblay-street, W.C. and Park-road, Teddington, of Messrs. PALMER, PALMER, & BULL, Solicitors, 24, Bedford-row; at the Guildhall Coffee-house, Gresham-street; and of Messrs. GADSDEN & ELLIS, 18, Old Broad-street, E.C.

KEMPTON PARK ESTATE.—Hampton, on the high road to Sunbury and Shepperton, and to the River.—Twenty-three Acres of Freehold Building Land, in which there is the finest brick earth, fit to make the best main bricks.

MESSRS. GADSDEN & ELLIS are instructed to SELL by AUCTION, at the GUILDHALL COFFEE HOUSE, near the Guildhall, Gresham-street, on THURSDAY, OCTOBER 13, at TWELVE for ONE, in one or more lots, TWENTY-THREE ACRES of FREEHOLD LAND, with road Fronted, and ready for immediate building operations, situate between the upper and lower roads from Hampton to Sunbury, and within five minutes' walk of the station on the Thames Valley Railway, which will be open for traffic immediately. The land lies close to several admired residences and estates, and commands fine views over the Thames and surrounding scenery, and is well deserving the attention of capitalists and builders.—Particulars may be obtained of CHARLES LAWS, Esq. No. 12, Doughty-street, W.C. and Park-road, Teddington; of Messrs. PATERSON & LONGMAN, Solicitors, 3, Winchester-buildings, Winchester-street, E.C.; at the Guildhall Coffee-house, Gresham-street; and of Messrs. GADSDEN & ELLIS, 18, Old Broad-street, E.C.

Fee future advertisement.

Camden Town, Sept. 23, 1864.

BERKSHIRE.—Building Land, opposite to the Wellington College and close to the Railway Station, with important frontage, for the erection of Villas or Public Institutions.

MR. ROBINS having disposed of the first portion of the estate, is instructed to SELL by AUCTION, at GARRAWAY'S, COFFEE-HOUSE, Change-alley, Cornhill, on FRIDAY, OCTOBER 14, at TWELVE for ONE o'clock in three or more lots, unless an acceptable offer be previously made by private contract, FREEHOLD BUILDING LAND, comprising about 16 acres, lying unusually compact, with an important and most valuable south frontage, for the erection of villas, immediately opposite the Wellington College, and along the rail way station, about three miles from the market town of Wokingham. The land offers great attraction to the directors of public institutions, requiring plots of 2 or 3 acres, and to builders, being high, gently rising from the south, the climate as most desirable and healthy, adorned by timber, and having a luxuriant belt of plantations on the south side, the footage extending to 2,000 feet, offering tempting sites for the erection of villas, which are also much required in this improving locality. There is brick earth on the estate, and a more attractive opportunity for building to advantage is not in the market. Full particulars, with plans, may be had twenty-eight days prior, of Messrs. BOOTY & BUTT, Solicitors, 1, Raymond-buildings, Gray's-inn, W.C.; at Garraway's; and at Mr. ROBINS'S Auction and Estate Offices, No. 5, Waterloo-place, Pall-mall, S.W.

PURLEY, near Croydon, contiguous to the Caterham Junction Station, on the main line of the Brighton and South Eastern Railways, about 12 mile from the south Croydon Terminus, and 12 miles from London, which is reached in half an hour by rail.

MESSRS. BLAKE will SELL by AUCTION, at the GREYHOUND INN, Croydon, on THURSDAY, OCTOBER 13, at FOUR for FIVE o'clock, Twenty Valuable FREEHOLD BUILDING PLOTS, and Two Cottages, with Gardens, being a portion of the Purley Hall Estate, the whole having useful frontages to the turnpike road, and to a new road through the estate. The land has a substratum of gravel and chalk, and is in a delightful rural and healthy situation. The proximity of the railway station, and ready means of communication with the metropolis, render the land of a safe and sterling character for the carrying out of extensive building operations.—Particulars, with plans, may be had at the Greyhound Inn, Croydon; at Garraway's Coffee-house, Change-alley; of Messrs. WEST & KING, Solicitors, 3, Charlotte-row, Mansion House; and of Messrs BLAKE, Croydon.

FLAISTOW, ESSEX.—Twelve superior Freehold Residences producing 280l. per annum; and Thirty Plots of eligible Freehold Building Land, near the Plaistow Railway station.

MR. JOHN M. DEAN will SELL by AUCTION, at GARRAWAY'S, Change-alley, Cornhill, on FRIDAY OCTOBER 7th, at TWELVE, in Forty Two Lots, Twelve FREEHOLD RESIDENCES, Thirteen elevations, let at single rents to highly respectable yearly tenants, producing 280l. per annum; and Thirty lots of eligible FREEHOLD BUILDING LAND, the whole excerpted from Lot 1, Plan, property situate in Park-road, Upper Plaistow Park, West Ham, close to the Plaistow Church, and within a short distance of the railway station. The land is high and dry, with gravel subsoil, and suitable for the erection of superior dwelling houses.—May be viewed, and particulars and conditions of sale, with plans, had at Garraway's; of A. A. WALLER, Esq. Solicitor, Church-row, Limehouse; and of Mr. JOHN M. DEAN, Auctioneer and Surveyor, The Grove, Stratford, E.

[illegible] OF GOOD SOUND HARD WELL-BURNT STOCK BRICKS, FRIDAY, OCT. 7th, 1864.—To Builders, Contractors, and Others.

MR. JAMES M. RICHARDSON has been favoured with instructions from the Proprietor to SELL by AUCTION, on the PREMISES, near the Victoria Brewery, Bridge-road, Tunbridge Wells (in consequence of the ground being required for the erection of the station on the Cranbrook Wells and Uckfield Railway), on FRIDAY, OCTOBER 7th, at ONE for TWO o'clock precisely, a quantity of good and hard well-burnt STOCK BRICKS, in lots suitable for the convenience of purchasers.—On view, and further particulars obtained of the Auctioneer, Tunbridge Wells.—Approved bills will be taken for purchases of 20l. and upwards.

RAILWAY CART HORSES.—Off the Thames Valley, between Twickenham and Shepperton.

MR. J. GOWER will SELL by AUCTION, at his REPOSITORY, Barlsican, on FRIDAY, OCTOBER 7, at ONE o'clock, by direction of Messrs Aird & Son, Contractors, being a fine Iron Roan, TWENTY powerful English CART and VAN HORSES, young and in prime condition, recently Thames Valley Line, nearly completed.—On view two days prior.

BRICKS! To BUILDERS and OTHERS. PICKINGS STOCKS, GRIZZLES, and PLACE, can be obtained in any quantity, at moderate prices, by applying to JOHN COSH, Stratford Brickfields, Stratford, E.

ABOUT a MILLION of HARD CLAMP BURNT BRICKS for SALE at HOLLOWAY.—Apply to H. C. BUNKELL, 1, Penn-road Villas, Holloway, N.

BRICKS for SALE.—20,000 of WHITE SUFFOLKS, 20,000 of SECONDS; also 20,000 RED SUFFOLKS. Quality A 1, price moderate.—For price and samples inquire at No. 4, Upton-place, Commercial-road, E.

BRICKS.—WANTED, 300,000 BRICKS. Immed ate cash.—State price by letter to G. L. M. Cornchandler, 17, Leader-street, Chelsea, S.W.

TO BUILDERS and OTHERS.—FOUR HUNDRED THOUSAND capital WHITE BRICKS FOR SALE. A part of them perforated. Lying close to the Great Northern Railway, within a few minutes' station of London.—For further particulars apply to Mr. LOVE, Stamford, St. Neots.

BRICKS! BRICKS!!—BINFIELD, near Bracknel and Wokingham, Berks.—For immediate SALE, a quantity of superior kiln and BUILDING BRICKS, PLINTH, SPLAY, and RUBBING BRICKS, &c. &c. For particulars apply to GEORGE BULLER, Behive Kiln, Binfield, near Bracknel, Berks.

AYLESFORD and BURHAM BRICK WORKS, near Maidstone, Kent.
MR. GEORGE FURNESS

Having increased his machinery appliances for the Manufacture of Bricks by erecting a number of the most approved patent machines, Architects, Builders, and Contractors are respectfully informed that they can be supplied with GAULT BRICKS of the best quality, and at moderate prices. He has from three to four millions in stock.—Prices and particulars furnished on application to Mr. GEORGE FURNESS, 36, Great George-street, Westminster; or to

MR. SLATER.
Thames Embankment, Cannon Wharf, Westminster.

" Floor Bricks, 40s. per 1,000.
White Kiln ditto, 36s. per 1,000.
Rape Tiles, at 25s. per 1,000.
Cash Prices. Delivered on Truks in London, or along the Line on the Great Eastern Railway. Quantities may be delivered by Vessel at any of the Thames Wharfs.

NEW STOCK NOW READY.
FINE WHITE BRICKS.
BEST RED BRICKS
White, Black, and Red Cutters. Also a large assortment of FANCY MOULDED BRICKS & GARDEN EDGINGS, Plain and Ornamental ROOFING and RIDGE TILES, Delivered to Vessels in the Dock alongside the Kilns, in the River Medway.
Pattern Sheets, and all information, may be had of R. LANGLEY, Agent, East Cowes park, Isle of Wight.

TO BRICKMAKERS.—All Parties who BURN BRICKS in CLAMPS are invited to inspect the NEW MODE of SETTING, patented by Mr. ROBERT WHITE, and which may be seen in operation at the Brickfields of
J. B. WHITE & BROTHERS, Erith, Kent.
The advantages of this plan are two fold.
1st. Nearly all the bricks are burnt into stocks, and the yield of inferior bricks is reduced from 35 to about 10 per cent of the total make, which in itself represents a large permanent saving.
2nd. The bricks are so much improved in colour and soundness as to give them a considerable additional value in the market over common stocks.
Licenses for use of the Patent granted to Brickmakers, on application to the Patentees 17, Millbank-street, Westminster.

PRIZE MEDAL AWARDED AT THE INTERNATIONAL EXHIBITION, 1862
THE ARCHITECTURAL POTTERY COMPANY, POOLE, Dorset, Manufacturers of BAINES'S PATENT ENAMEL MOSAIC TILES; also PRINT INLAID TILES, 6 inches and 4 inches square, hexagonal and octagonal, &c.; white, red, buff, black, blue, grey, &c. for churches, entrance-halls, corridors, conservatories, lobbies, vestibules, porticos, verandahs; plinths, friezes, string courses, pilasters &c.; also, white glazed tiles for baths, dairies, &c. They also beg to call attention to their NEW MANUFACTURE OF METALLINE TILES,
6 inches by 1 inch thick, in truck-loads of 4,000, from 63s. per 1,000, cash, delivered to Nine Elms. Also, malt-kiln, ridge, gutter, and hip tiles, buff, glazed, and fire-bricks. Specimens may be seen, and every information obtained, at the Offices, No. 36, Parliament-street, S.W.; also at the Architectural Exhibition, 9, Conduit-street, Regent-street; Kensington Museum; the Fine Arts' Academy; and the Crystal Palace, Sydenham.—Address, The Architectural Pottery Company, 36, Parliament street, S.W.; or Poole, Dorset.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21 Wharf, Macclesfield street, North, City road Basin, N. Sadly, that the trade term, "TERRO METALLIC," is the exclusive right of the Proprietor; and lastly, that the "Reports of the Jurors," page 251, of the Great Exhibition, 1851, refer to the grant of a First-class Medal and Rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

TWO PRIZE MEDALS AT THE INTERNATIONAL EXHIBITION
MAGNUS'S ENAMELLED SLATE obtained the Medal of the Society of Arts; the Prize Medal at the Great Exhibition, 1851; Two First-class Medals at the Paris Exhibition; and Two Prize Medals at the International Exhibition of 1862.
Lasting imitations of this beautiful material are being palmed upon the public. Architects are therefore requested to see that the name of "MAGNUS" is upon each article.
Chimney-pieces, Billiard-tables, Table-tops, Baths, Wall-linings, &c. a New Illustrated Catalogue of which can be had at the Pimlico Slate Works, 39 and 40, Upper Belgrave-place, Pimlico, S.W.

PRIZE MEDAL TO MAW & CO. INTERNATIONAL EXHIBITION, 1862.
IMPERISHABLE TESSELATED PAVEMENTS, combining a highly decorative and economical substitute for ordinary floors of their portable coverings. MAW & CO.'S Pattern book, designed by M. Digby Wyatt, esq. together with a special design and estimate of cost adapted to any given dimensions of hall, passage, conservatory, verandah, &c. &c. will be sent on application to Benthall Works, Broseley, Salop.
May be seen at the Exhibition of Building Inventions, &c. now open at the Galleries of the Architectural Exhibition, 9, Conduit-street, free.
London Agents—W. B. SIMPSON & SONS, 456, West Strand, who have on view a great variety of specimens of the Pavements.

MONEY on FREEHOLD and LEASEHOLD PROPERTY, by the MUTUAL LOAN FUND ASSOCIATION (Incorporated by Act of Parliament, 18 & 19, RUSSELL STREET, COVENT GARDEN, W.C. Advances from 50l. to 15,000l. upon Freehold and Leasehold Property, for any term up to ten years. Mortgages redeemable, and the advance can be repaid by easy instalments. Facilities afforded to tenants to purchase the houses they occupy, and the repayment of the advance taken as rent. Greater advantages are offered to borrowers than in building societies, there being no shares to subscribe for, nor competition for an advance, and no deduction from the loan. No preliminary fees. Prospectus and forms of proposal sent on receipt of a directed stamped envelope
EDWARD HARPER, Secretary.

London:—Printed by CHARLES WYMAN, Printer, at the Printing-office of Cox & Wyman, Nos. 74 and 75, Great Queen-street, Lincoln's-inn fields, in the Parish of St. Giles-in-the-fields; and published by the said CHARLES WYMAN, at the Office of "THE BUILDER," No. 1, York-street, in the Parish of St. Paul, Covent-garden, both in the County of Middlesex.—Saturday, October 1, 1864.

PROFESSOR DONALDSON'S LECTURES on ARCHITECTURE and CONSTRUCTION, at University College, commence on TUESDAY, the 18th OCTOBER. Further particulars can be had at the College Office. The classes will meet on this TUESDAY, at SIX in the evening, for both divisions to arrange details.

BY ORDER of the SECRETARY of STATE for INDIA.
DESIGN FOR COMPETITION.—PRESIDENCY COLLEGE AND SENATE HOUSE.

The Madras Government are prepared to receive DESIGNS for a new PRESIDENCY COLLEGE, and for a SENATE HOUSE, to be built at Chepauk, Madras.

A schedule of measurements, together with a plan of the proposed site, can be had on application to the UNDER SECRETARY of STATE for INDIA, India Office, Westminster.

The rates on which the work is to be calculated will also be furnished at that office. The gross estimate is not to exceed Rupees 2,50,000 for the College, and Rupees 1,50,000 for the Senate House.

The buildings will be erected on contiguous sites, and both should therefore be planned in the same style of architecture.

There must be ample provision for proper ventilation, and the walls must be protected, as far as possible, from the direct rays of the sun.

The designs are unrestricted, firstly, as to the style, provided it is suited to the climate, and to the use to which the buildings are to be devoted; and secondly, as to materials, provided they are procurable in Madras, at prices which will admit of their being used in the buildings as designed.

The designs must include,—

1st.—Ground-plan, and plan of each story.

2nd.—Elevation of each of the four faces, if not alike.

3rd.—Transverse sections.

The plans and elevations to be on a scale of 8 feet to an inch. A specification, in sufficient detail, to accompany each plan to enable the Judges to decide whether the plans can be carried out within the sum allowed.

A prize of Rupees 3,000 will be awarded for the best design, provided it fairly fulfils the above conditions.

If the best designs, in an artistic point of view, fail to fulfil any of the above essential conditions, the Judges will be empowered to reduce or withhold the prize; and no prize will be awarded to a design merely because it fulfils the conditions, if otherwise conspicuously deficient in artistic merit.

The drawings and estimates, &c. should be sent in on or before the 1st of JANUARY, 1865, in the usual manner with mottoes and envelopes, containing the name and address of the artist, to the Secretary to Government, Public Works Department, Madras, by whom the envelopes will be opened after the prizes have been adjudged.

It will be optional to Government to avail themselves of the services of the author in altering or executing the design selected, and that design will remain the absolute property of Government.

The design will be selected and the prize awarded by a Committee consisting of,

The Secretary to Government, Public Works Department.

The Director of Public Instruction.

The Chief Engineer, Madras Railway Company,

who will be asked to aid Government in the adjudication.

Unsuccessful designs will be returned to the authors if claimed by them, or by their authorized agents, within one month from the period of adjudication.

April 21, 1864. (Signed) CHARLES A. ORR, Colonel, R.E. Secretary to Government.

India Office, September 21, 1864.

BY Order of the Secretary of State for India in Council.—NOTICE is hereby given, that TWENTY-FIVE APPOINTMENTS in the Upper Class of the ELECTRIC TELEGRAPH DEPARTMENT in INDIA will, in the year 1865, be open to PUBLIC COMPETITION.

A COMPETITIVE EXAMINATION will, accordingly, be held in this Office in the month of MAY next.—Full printed particulars of the conditions on which candidates will be admitted to the examination, and also respecting the nature of the appointments to be competed for, may be obtained at this Office, on application, either personally or by letter, addressed to the "Under Secretary of State for India," India Office, London, S.W.

India Office, 1st July, 1864.

THE METROPOLITAN BUILDING ACT, 1855. Section 33.—The Institute of British Architects hereby give notice, that an EXAMINATION of persons desirous of obtaining a CERTIFCATE of COMPETENCY to perform the duties of DISTRICT SURVEYOR, will take place at the ROOMS of the INSTITUTE, No. 9, Conduit street, Hanover-square, W. on FRIDAY, the 28th of OCTOBER, at TEN o'clock in the Forenoon. Persons desirous to be examined must, on or before TUESDAY, the 18th day of OCTOBER, send an application, which must be accompanied by a statement, according to a form to be previously obtained at the Board of the Institute

JOHN P. SEDDON,
CHAS FORSTER HAYWARD, } Hon. Secs.

Conduit-street, October, 1864

BILLING'S PATENTS.—CHIMNEY TERMINALS.—THROAT VALVES.—NOTICE to ARCHITECTS.—The Proprietors of these PATENTS have given the Widow an Interest in the same, and have considerably reduced the prices of the Articles, trusting that by so doing these useful Inventions may be introduced more generally in all new Buildings.—For prices apply to the Manager, Mr TYLER, 12 Abingdon street, Westminster, who will also afford any information, he having been for many years engaged with the late Mr. BILLING, in the practical curing of Smoky Chimneys.

NOTICE.

BROWN & GREEN'S KITCHEN RANGE WAREHOUSE is now REMOVED to the NEW PREMISES, 73—74, Bishopsgate-street Within, a few doors from the late Address, at No. 81. These afford accommodation for a still larger stock of their Patent Prize Medal Ranges and Horizontal Cooking Utensils, &c to meet the great public demand; and also for the consequent more extensive execution of all descriptions of hot water, bath, laundry, and steam work.

73 74, Bishopsgate street Within.

COMPETITIONS.

TO ENGINEERS and OTHERS.—The Corporation of Okehampton contemplate BRINGING WATER into the town for the use of the inhabitants of the borough, and are desirous of receiving PLANS, Specifications, and Estimates for the WORKS proposed, particulars of which may be obtained at my Office. The Corporation will pay to the person whose plan shall be approved and adopted the sum of 20l.; but in case such person shall afterwards become the Contractor for effecting the work, that sum will be deducted from the amount of such Contract. The plans, &c. to be delivered to me within a month from this date.

JOHN MARSH BURD, Town Clerk.

Okehampton, Sept. 19th, 1864.

CITY of COVENTRY.—MARKET HOUSE.—To ARCHITECTS. The Corporation of Coventry invite DESIGNS, PLANS, SECTIONS, ELEVATIONS, SPECIFICATIONS, and ESTIMATES for the ERECTION of a MARKET HOUSE. The Plans to be of a uniform scale of 8 feet to an inch. The cost of the entire Building, with fittings, not to exceed 10,000l. The Architect who, in the opinion of the Council of the said City, produces the best Designs, &c. to receive 80l.; the second best, 40l.; and the third best, 20l. The Designs, &c. for which premiums are awarded to become the property of the Corporation, and the Architect of the Designs taking the first premium to supply the Corporation with Working Drawings, if required, receiving for the same such a sum as with the premium will amount to 2½ per cent. on the outlay. The Corporation will not bind themselves to employ the architect in carrying out his designs, or to carry them out at all, and if the plan sent in should not, in the opinion of the Council, be of sufficient merit, the premium will not be awarded, nor will they be awarded unless the Council should be satisfied that the same can be executed within the estimate. Each set of designs, &c must be distinguished by a motto, accompanied with a sealed envelope, containing the name and address of the competitor, and bearing a similar motto to that on the design, &c which envelopes will not be opened until after the plans are decided upon. The designs, &c must be enclosed in a sealed cover, endorsed "Plan for Coventry Market-house," and addressed to THOMAS BROWETT, Town Clerk, Coventry, and delivered on or before the 23rd day of NOVEMBER next. A block plan of the site, with approaches, levels, statement of conveniences required, and of the conditions to be observed by competitors, can be had on application personally, or by letter, to J. E. GREATOREX, City Surveyor, St. Mary's Hall, Coventry.

THOMAS BROWETT, Town Clerk.

Coventry, September 23, 1864.

TO ARCHITECTS.—NEW CHURCH at BLOXWICH.—It is intended to build a New PARISH CHURCH, to cost about 5,000l. on the site of the present structure. The Building Committee invite Architects to send in PLANS and SPECIFICATIONS.—The site may be inspected, and full particulars obtained, on application to the Secretary, Rev. J. BARROW, Bloxwich Parsonage, near Walsall.

DESIGNS for FULFORD CHURCH.—FURTHER EXTENSION of TIME.—A PREMIUM of Fifteen Guineas is offered for the best SET of DESIGNS for the New Church at Fulford. Selections to be made by the Committee, and the Design selected to become the property of the Parish. Extreme estimate 2,000l.; to seat not less than 450. Site, 90 yards square. Spire or Tower. Outside, Hammered Stone. The Designs must be sent in to the Incumbent, care of the Postmaster, Fulford, York, on or before THURSDAY, the 20th OCTOBER.

DESIGNS for the O'CONNELL NATIONAL MONUMENT, in SACKVILLE STREET, DUBLIN.—The Committee for the Erection of the O'Connell National Monument, in Sackville-street, Dublin, are prepared to receive DESIGNS from Architects, Artists, &c. for a TESTIMONIAL or MONUMENT to O'CONNELL. Intending Competitors will receive, on application to the Honorary Secretaries of the Committee, at the City Hall, Dublin, a printed statement of the views of the Committee the condition of the competition, and a ground-plan of the locality. Prizes of 100l., 50l. and 40l. are at the disposal of the Committee, to be awarded for designs, subject to the conditions above referred to. All designs must be received at the Committee-room, free of expense, on or before the 1st of JANUARY, 1865.

CONTRACTS.

WAR DEPARTMENT CONTRACTS.—NOTICE to BUILDERS.

TENDERS are required for the SUPPLY of MATERIALS and LABOUR for War Department WORKS, at Aldershott Camp and Permanent Barracks, in the county of Hants including Repairs to the existing buildings, under a Triennial Contract, from the 1st January, 1865, to the 31st March, 1868, determinable at any period after one year, on either party giving to the other three months' notice in writing.

Copies of the schedules, for which the sum of six shillings and nine pence for each copy must be paid on issue, together with forms of Tender, may be obtained on application at this Office.

Although the said schedules include prices for work done, and for day labour, the Contractor will, as a general rule, be called upon only to supply materials.

The Tenders to be addressed, under cover, to the Director of Contracts, War Office, Pall Mall, London, S.W. endorsed, in the left-hand corner, "Tenders for Works at Aldershott," on or before SATURDAY the 5th NOVEMBER, 1864.

The Secretary of State for War does not bind himself to accept the lowest or any of the Tenders.

Royal Engineer Office, Aldershott,
14th September, 1864.

ARMY CONTRACTS. — Commissariat Office, Aldershott, 1st October, 1864.

TENDERS will be received at this Office until TWELVE o'clock, Noon, on WEDNESDAY, the 12th of OCTOBER, from persons who may be willing to enter into CONTRACTS for the SUPPLY of FLOUR (Ration and Hospital), and MEAT, in such quantities as may be required, for six months, from the 1st December, 1864, to the 31st May, 1865, for the use of Her Majesty's Forces stationed at Aldershott Camp, and within the command.

The above being three distinct Contracts, separate Tenders are required for each description of Flour, and for Meat.

Forms of Tender and Conditions of Contract may be obtained on application at this Office, by letter addressed to the Senior Commissariat Officer, or in person, between the hours of TEN and FOUR o'clock.

The Tenders must be properly filled up, signed, and delivered at this Office (under closed envelope, marked on the outside "Tender for Commissariat Supplies"), and no Tender will be noticed unless made on forms obtained from this Office and delivered by the hour appointed.

ARMY CONTRACTS.—Commissariat Office, Aldershott, 1st October, 1864.

TENDERS will be received at this Office until TWELVE o'clock Noon, on FRIDAY, the 28th OCTOBER, from persons who may be willing to enter into Contract to SUPPLY PAILLASSE STRAW and STRAW for ROYAL ENGINEER SERVICE, in such quantities as may be required, for Twelve Months, from the 1st December, 1864, to the 30th November, 1865, for the use of Her Majesty's Forces stationed at Aldershott Camp, and within the command.

Forms of Tender and conditions of contract may be obtained on application at this Office, by letter addressed to the Senior Commissariat Officer, or in person, between the hours of TEN and FOUR o'clock.

The Tenders must be properly filled up, signed and delivered at this Office (under closed envelope, marked on the outside, "Tender for Straw"), and no Tender will be noticed unless made on forms obtained from this Office, and delivered by the hour appointed.

CONTRACT for LAYING GRANITE CURB and SETS, and YORK PAVEMENT.—The West Ham Local Board of Health are prepared to receive TENDERS from parties willing, from time to time, to REMOVE the above mentioned materials from the Victoria Docks or Wharfs in the River Lea, and to LAY the same on the Roads, Paths, and Places in this district, in accordance with specifications and conditions, which may be examined at the Office of Mr. MARSHALL, the Surveyor to the Board, Rokeby House, Stratford, E. where also forms of Tender may be procured, and any further information may be obtained. The Tenders, endorsed "Laying Pavement, &c." are to be sent to me on or before MONDAY, the 10th OCTOBER next.—By order of the Board

CHARLES WILSON, Clerk to the Board.

Rokeby House, Stratford, 14th September, 1864.

GRANITE CURB and SETS of YORK PAVEMENT.—The West Ham Local Board of Health are prepared to receive TENDERS from parties who may be willing to DELIVER any of those MATERIALS, either in the Victoria (London) Docks, or on such Wharfs on the River Lee as may be named. Forms of Tenders, with any particulars and information required, may be obtained by application to Mr. MARSHALL, the Surveyor to the Board, at his Office, in Rokeby House, Stratford, E. and the Tenders are to be sent addressed to me, and indorsed "Tender for Pavement, &c." on or before MONDAY, the 10th OCTOBER next.—By order of the Board,

CHAS WILSON, Clerk to the Board.

Rokeby House, Stratford, 15th September, 1864.

BLACKFRIARS BRIDGE. — TENDERS will be received for the OLD STONE of this Bridge, consisting of Portland, granite in blocks and in steps, Roach, Portland, and rough rubble. Also for the handsome cornices, with moulded bases and carved caps.—Apply to Messrs. THORN & CO. Contractors, on the Bridge.

[For remainder of Contracts see next Page.

BOROUGH of PORTSMOUTH.—To MASONS and PAVIORS—The Roads and Works Committee appointed by the Town Council of the Borough of Portsmouth, acting as the Local Government Board, will be prepared to receive TENDERS from competent and responsible parties who may be willing to contract for the execution of the MASONS' and PAVIORS' WORK in the Borough for the period of one year from the 1st day of OCTOBER inst. The specification, printed form of Tender, and any other information, may be obtained of Mr LEWIS ANGELL, C.E. the Borough Engineer, at the Offices of the Board, Arundel street, after THURSDAY, the 6th OCTOBER instant. Tenders to be sealed, and endorsed "Tender for Masons' Work," and delivered at the Offices of the Board, by or before FIVE o'clock p.m. on the 17th inst. Sureties will be required for the due performance of the contract. No Tender will be received unless made on a printed form, to be obtained at the Offices of the Board. The Board do not bind themselves to accept the lowest or any Tender.—By order,

October 1, 1864. W. O. MARSHALL, Clerk to the Board.

BOROUGH of PORTSMOUTH.—To STONE MERCHANTS and OTHERS—The Roads and Works Committee appointed by the Town Council of the Borough of Portsmouth, acting as the Local Government Board, will be prepared to receive TENDERS from competent and responsible parties, who may be willing to CONTRACT for the SUPPLY of such QUANTITIES of the Best BLUE BROKEN GUERNSEY GRANITE and GRANITE CHIPPINGS, as may from time to time be required, for a period of one year from the date of the contract, the same to be delivered, free of wharfage, and at all times, at the Town Quay, Portsmouth. The estimated quantity of granite is about 3,000 tons, and of granite chippings about 500 tons. The specification, printed form of Tender, and any other information, may be obtained of Mr LEWIS ANGELL, C.E. the Borough Engineer, at the Offices of the Board, Arundel-street, after THURSDAY, the 6th OCTOBER instant. Tenders to be sealed, and endorsed "Tender for Granite," and delivered at the Office of the Board by or before FIVE o'clock p.m. on MONDAY, the 17th OCTOBER next, in order that the same may be inserted in the printed form of the contract. No Tender will be received unless in exact accordance with the printed form, to be obtained at the Offices of the Board. The Board do not bind themselves to accept the lowest or any Tender.—By order,

October 1, 1864. W. O. MARSHALL, Clerk to the Board.

TO ROAD CONTRACTORS, &c.—The London Wharfing and Warehousing Company, Limited, invite TENDERS for the MAKING of ROADS and FILLING UP SPACES at Plaistow Wharf, near Victoria Docks, as per specifications to be seen at the Wharf, on MONDAY, the 10th inst. Tenders to be delivered at No. 6, Mark-lane, on WEDNESDAY, the 12th inst. before TWO o'clock.

TO STONE MERCHANTS and MASONS. The London Wharfing and Warehousing Company, Limited, invite TENDERS for PAVING their STOREHOUSES at Plaistow Wharf.—Particulars and specification to be seen at their Office, 6, Mark-lane, E.C. on MONDAY, the 10th instant. Tenders to be delivered on WEDNESDAY, the 12th instant, before TWO o'clock.

TOTTENHAM LOCAL BOARD of HEALTH.—To ROAD-MAKERS and OTHERS.—Notice is hereby given, that the Tottenham Local Board of Health intend entering into a CONTRACT for RE-FORMING, LEVELLING, GRAVELLING and ROLLING certain ROADS on the Finsbury Freehold Land Society's Estate, Wood Green, Tottenham, according to the terms of the specification, schedule, and drawings, which may be seen at the Offices of the Board, on and after MONDAY, the 10th day of OCTOBER current. Copies of the specification and form of Tender, one guinea each. Sealed Tenders, entered "Tenders for Road Making Estate," must be delivered at the Offices of the Board, High Cross, Tottenham, between TEN and FOUR, on or before FRIDAY the 21st instant. But the Local Board do not bind themselves to accept the lowest or any Tender; and the party whose Tender shall be accepted will be required to provide approved sureties to the amount of half the contract for the due and satisfactory performance of the works

By 20 Order, T. Hellman, October 6, 1864.

PARISH of CHELSEA, in the COUNTY of MIDDLESEX.—FLINTS.—The Vestry of this Parish will meet at the Vestry Hall, Chelsea, on TUESDAY, the 25th day of OCTOBER instant, at THREE o'clock in the afternoon precisely, to receive TENDERS from persons willing to CONTRACT, until the 30th day of the same month of OCTOBER, for the SUPPLY of BEST CLEAN GREY BROKEN PITT FLINTS, according to a sample to be seen here, to be delivered at the Vestry Depôt, in Alpha place, Manor-street, at such times and in such quantities as may be directed. The Vestry do not bind themselves to accept the lowest or any Tender. The Flints will be measured at the said depôt by an officer of the Vestry. Sealed Tenders, stating the proposed prices, with the names and description of two sufficient sureties for the performance of the contract, to be delivered to the Clerk by or before TWELVE o'clock on TUESDAY, the said 25th day of OCTOBER. No Tender will be received or accepted unless made on one of the printed forms to be obtained at my Office. By order,

Vestry Hall, King's-road, Chelsea, October, 1864. CHARLES LAHEE, Vestry Clerk.

ST. ALBAN'S CORN EXCHANGE.—IMPROVEMENTS and REPAIRS.—To BUILDERS and OTHERS.—Persons desirous of TENDERING for certain IMPROVEMENTS and REPAIRS to the Corn Exchange, St. Albans, according to a specification prepared by Mr. THOMAS HILL, Architect, of No 14, Bedford-row, London, and St. Albans, are hereby informed that the said specification, conditions of contract, and form of agreement, may be inspected at the Police Station at St. Albans, between the hours of TEN a.m. and SIX p.m. from the 8th to the 17th day of OCTOBER, 1864, both inclusive. Tenders, under seal, to be delivered at the Town Clerk's Office, St. Albans, on or before the 18th day of OCTOBER, 1864. The Town Council do not bind themselves to accept the lowest or any Tender.

THOS. WARD BLAGG, Town Clerk.

Town Clerk's Office, St. Albans, October 5, 1864.

TO BUILDERS and CONTRACTORS.—TWO six-roomed HOUSES to be ERECTED and FINISHED, at Cardiff Town, Isle of Dogs, for Mr Edward Leah.—Plans and specifications to be seen on and after MONDAY next, OCTOBER 10th, at the Local Board-office, Manchester Road-chapel, between the hours of TEN o'clock, a.m. and FIVE o'clock, p.m.—The lowest Tender will not necessarily be accepted.

TO BUILDERS and IRONFOUNDERS.—NEW TOWN HALL, ROCHDALE.—CONTRACTS are required for the EXCAVATING and BUILDING of the BASEMENT STORY for the above, and plans, specifications, and quantities to be seen at the Office of the Town Clerk, Rochdale; or at the Office of Mr. W. H. CROSSLAND, the Architect, New Corn Exchange, Leeds, on and after the 11th inst. Tenders to be sent to the Town Clerk, Rochdale, not later than MONDAY, the 24th of OCTOBER instant. The lowest Tender not necessarily accepted

ZACH. MELLOR, Town Clerk.

Rochdale, 5th October, 1864

TO DUST CONTRACTORS and OTHERS. The Vestry of the Parish of St. Giles, Camberwell.—The Committee for Contracts hereby give notice that they will meet again at the Vestry-hall, Camberwell, on WEDNESDAY, the 12th day of OCTOBER instant, at FOUR o'clock precisely, to receive TENDERS for one, two, or three years, at the option of the Contractor or desire of the Vestry reserving to themselves the right of determining the Contract at either of those periods) for the Purchase, Collection, and Removal of all the Ashes, Cinders, Rubbish, Dust, Soil, Refuse, Filth, Rich, &c. made or to be made from the several houses, streets, &c. in the Districts of the Parish, namely:—the District of St. Giles, comprising Camberwell Workhouse, Dulwich and Camden Ward; the District of St. George, being St George's Wards, Nos. 1 and 2; the District of Peckham, being Wards Nos. 4 and 5; and the District of Dulwich, being the Hamlet of Dulwich. Approved sureties will be required for the performance of the Contract, at the names and addresses of the three proposed sureties must be entered on the Tenders, and the parties proposing to be the sureties must be present when the Tenders are opened. The Committee do not pledge themselves to accept the lowest or any Tender. The form of Contract may be seen at the Vestry Clerk's Office. The parties Tendering must each put their name on the cover of the Vestry Clerk's Office, and deposit with their Tender 40s. By order,

GEORGE WILLIAM MARSDEN, Vestry Clerk.

Vestry Hall, Camberwell, 4th October, 1864.

TO BUILDERS and CONTRACTORS.—Persons desirous of TENDERING for the EXECUTION of the WORKS required in the ERECTION of THREE VILLAS, to be built at Leighton Buzzard, in the County of Bedford, are requested to forward their names to us on or before the 17th instant. Due notice will be given to the applicants as to the inspection of drawings, specifications, &c. BELLAMY & HARDY, Architects and Surveyors.

Lincoln, October 4, 1864.

TO BUILDERS and CONTRACTORS.—NEW EXCHANGE BUILDINGS, HULL.—The Directors of the Hull Exchange Company (Limited) are requested to receive TENDERS for the ERECTION and COMPLETION of their PRO POSED NEW BUILDINGS, in Lowgate and Bowlalley-lane, Hull. The plans, specifications, and conditions of contract may be examined, at 1 till 4 o'clock, at the premises of one guinea, at the Offices of the Architect, Mr WILLIAM BOTTERILL, 2, Parliament-street, Hull, after TUESDAY, the 27th instant. Sealed Tenders, properly endorsed, to be addressed to the Chairman, and delivered at the Temporary Offices of the Company, 22, High-street, Hull, on or before WEDNESDAY, the 12th of OCTOBER next. The Directors do not pledge themselves to accept the lowest or any Tender.

Hull, 14th September, 1864. T. W. FLINT, Chairman. W. H. MINES, Secretary.

HALIFAX CORPORATION WATER-WORKS.—WORKS in the LUDDENDEN VALLEY.—To CONTRACTORS.—The Corporation of Halifax are ready to receive TENDERS for the CONSTRUCTION of the WORKS included in the following Contracts:—

No. 4, or CASTLE CARR CONTRACT, comprising the formation of three Reservoirs, a Gauge Basin, and the Weirs, Watercourses, Roads, and other works connected therewith. The Reservoir Embankments are 2, feet, 7 feet, and 80 feet in height respectively, and the gross amount of earthwork is about 2,500 cubic yards.

The plans, sections, and drawings may be seen, and specifications and forms of Tender obtained, at the Town-hall, Halifax, and at the Offices of the Engineers, J. F. BATEMAN, Esq. No. 8, Saint James-square, Manchester, and No. 16, Great George street, Westminster, on and after MONDAY, the 3rd of OCTOBER next. Sealed Tenders must be addressed to and left with JAMES EDWARD NORRIS, Esq. Town Clerk, Halifax, on or before MONDAY, the 24th OCTOBER, 1864 endorsed with the name of the particular Contract for which it is a Tender. The Corporation do not bind themselves to accept the lowest or any Tender, and they may, if they see fit, let the whole work in one or more contract or contracts.

N.B.—No. 3 Contract is withdrawn.

By order, J. E. NORRIS, Town Clerk.

Town-hall, September 28th, 1864.

TO BUILDERS and OTHERS. Persons desirous of CONTRACTING for the EXECUTION of ADDITIONS and ALTERATIONS to the ROYAL OAK HOTEL, Sevenoaks, Kent, can apply, by letter only, to HARRY R. NEWTON, Architect, 6, Argyll-street, Regent-street, London, W.

TO BUILDERS.—Persons willing to CONTRACT with the Justices of the County of Kent for the ERECTION of a POLICE STATION at Sittingbourne may see the plans and specifications at the Office of the County Surveyor, Maidstone, any day except Sunday, between the hours of TEN and FIVE. The work is to be executed for agreeably to the form to be obtained at the County Surveyor's Office, where no old Tenders, endorsed "Tender for Sittingbourne Police Station," are to be delivered by TEN o'clock in the forenoon of TUESDAY, the 25th day of OCTOBER next, and persons tendering are to attend the Justices at the Courts of Justice, Maidstone, at HALF-PAST TWELVE o'clock on that day. Neither the lowest nor any other Tender will be accepted unless approved of in all particulars, and security will be required for the performance of the Contract.

H. A. WILDES, Clerk of the Peace.

Maidstone, September 30th, 1864.

THE YORK UNITED GAS-LIGHT COMPANY.—To IRONFOUNDERS, &c.—Persons willing to TENDER for a WROUGHT-IRON ROOF, for a large Shed at the above-named Works, near Monk Bridge, in the city of York, may inspect the drawings and specifications at his Office, on and after THURSDAY, OCTOBER 6. Tenders to be delivered at my Office before FIVE o'clock p.m. on WEDNESDAY, OCTOBER 12. The Directors do not pledge themselves to accept the lowest or any Tender.

Castlegate, York, September 30, 1864. P. WILSON GOULD, Architect.

VICTORIA MARBLE WORKS, 38, LOWER BELGRAVE PLACE, adjoining the Victoria Railway Station, and 46 Jermyn-street, Pimlico, London.

BELLMAN & IVEY, GENERAL AND ORNAMENTAL PLASTERERS, Manufacturers of SCAGLIOLA MARBLE and SUPERIOR PLASTER OF PARIS. This Plaster, made expressly for their own business, is of excellent quality, and its extreme lightness in weight ensures a saving of 30 per cent. in use, from its covering one-third more superficies than the general plaster.

PRIZE MEDALS were awarded Messrs. Bellman & Ivey for their Works at the Exhibition of 1862, and again in 1862. PLASTER WORKS, 3, BEDFORD-STREET, LIQUORPOND-STREET, LONDON, E.C. SHOW ROOMS AND OFFICE, 14, BUCKINGHAM-STREET, PORTLAND-ROAD LONDON, W.

LITTLE CASTERTON FREESTONE. Apply, for prices, &c. to OCTAVIUS N. SIMPSON, STAMFORD, The Owner; and see Specimen at the Museum of Practical Geology, Jermyn-street, W.

This stone (which is a perfect oolite) is raised in blocks of any probable size, and is about 4 feet thick in the bed. It will stand ANY WEATHER, is much used for water-works, and for the building and restoration of churches. When used as ashlar work it is not necessary to place it bed-wise. It works freely with a tooth-saw, and is wrought at a cheaper rate than any stone in the kingdom.

* * The above WEATHER STONE is used largely by London Builders.

W. & J. FREEMAN, Merchants in the various descriptions of STONE, GRANITE, and SLATE, for Engineering and Building Purposes. Supplies direct from the Quarries, by vessel or railway. Direct communication with the principal ports for EXPORTATION. Wharf prices and estimates for special contracts, including quarry work or other labour, forwarded on application.—Office, 27, Millbank-street, London, S.W.

CAEN and AUBIGNY STONE. FOUCARD, BROTHERS, STONE MERCHANTS and QUARRYMEN. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Office—10, Three Crown-square, Southwark.

THE SCOTTISH GRANITE COMPANY (Limited) are prepared to EXECUTE ORDERS in Polished, Rail, or Grey GRANITE, for Monumental or Architectural purposes. The Red Granite from their quarries is more highly prized than any other known, and can be obtained in large blocks. The Company are also ready to undertake Contracts for the supply of any quantity of their Material, either in blocks or rough dressed, and in lengths extending to 20 feet and upwards if required. Specimens of the stone may be seen at the Offices of the Company, 30 Cannon-street, London, E.C. and terms may be ascertained by application to the Secretary.

ABERDEEN POLISHED GRANITE WORKS.—Awarded Prize Medal in 1851, Silver Medal in 1855, and Two Prize Medals in 1862. Red, Blue, and Grey Granite for every description of architectural construction, decoration, memorials, and general purposes. Apply to ALEX. MACDONALD, FIELD, & CO. Aberdeen; and at London Depôt, 401 Euston-road, N.W. DAVID WILLET, Agent.

WEARDE STONE QUARRIES, LIMITED. The Stone produced from these Quarries has been proved to be the most durable of any in the market, and can be had for Polishing in any sizes; also for Macadamizing.—Samples sent, with prices, on application to the Manager, E. M. CROKER, Gunnerslake, Cornwall.

RED MANSFIELD STONE, WHITE MANSFIELD STONE. YELLOW MAGNESIAN or BOLSOVER LIMESTONE. Consigned in railway trucks, direct from the Quarries, in blocks not exceeding twelve tons; or worked at the Quarries and delivered free from injury at any railway station. Mr. ROBERT LINDLEY, Mansfield Quarries, Nottinghamshire.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand from above or below Bridge, delivered by the yard or per barge. Ballast, screened or unscreened, by the yard or per barge. Stocks, Lime, and Old Bricks. Dry Rubbish delivered, per barge, in any quantity alongside the Thames.

SLATES.—JONES & CO. have a STOCK of SLATES of different sorts, from the best quarries in Wales, and CISTERNS delivered at any station in quantities of not less than five tons, from their depôts. BANGOR, GARSTON, SALTNEY, CHESTER, and GLOUCESTER. Prices forwarded and estimates given on application. 1, BOLD TERRACE, CHESTER.

CAMEL SLATE and SLAB QUARRY, WADEBRIDGE, CORNWALL. The Proprietors of this Quarry are prepared to execute ORDERS for SLATE of first and second quality; also for SLABS of exceedingly good quality, well adapted and suitable for Flooring, Paving, Flags for Streets, Window Sills, Chimney pieces, Skirting, Water and Manure Tanks, and Tombs; also for Enamelling and any purpose for which Slate is used. Slabs can be supplied from 60 feet to exceeding 100 feet super. in a stone. Vessels can approach the wharf from whence the slate is shipped and lie in safety.—Price List, and any information required, can be obtained on application to the Manager. Dated 29th September, 1864.

NO SHUTTER BARS.

JENNINGS'S SHOP SHUTTER SHOE. SHOP SHUTTERS are SHOD and SECURED by the above, at HALF THE COST OF THE UNSIGHTLY AND DESTRUCTIVE SHUTTER BAR. Shops referred to in every public street in London. When ordering the above, send PARTICULARS to GEORGE JENNINGS, Engineering Depôt, Pale's Wharf, Stangate, Lambeth, S.

CHAPLIN'S PATENT PORTABLE STEAM ENGINES AND BOILERS.

PRIZE MEDAL, INTERNATIONAL EXHIBITION, 1862.

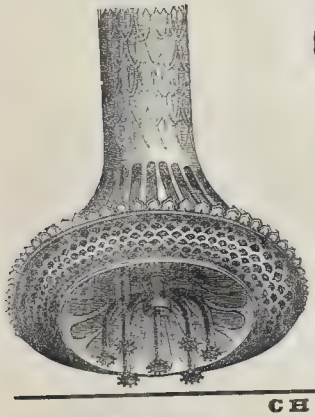
Stationary Engine. From 1 to 30 Horse Power.
Portable Steam Crane. 1 to 30 Tons.
Contractors' Locomotive. 6 to 27 Horse Power.

From the strength, simplicity, and compactness of these Engines, they are now extensively used for general purposes; also in situations where Steam Engines of the ordinary construction cannot be applied.

Stationary Engines,—require no building in, nor chimney stalk, and with our Patent forced combustion apparatus, will burn inferior qualities of coal, wood, or peats. These Engines are specially suited for shipment, and may be packed inside the Boiler to economise freight.

Portable Steam Cranes,—for wharf or railway, with wrought-iron carriages on wheels, link motion, foot brake, &c., all under the easy control of one man; the larger sizes hoist, lower, and turn round in either direction by steam.—*These Cranes were selected by H.M. Commissioners for receiving and sending away the heavy machinery at the International Exhibition of* 1862.

Contractors' Locomotives,—are adapted to work on rails or tramways of a gauge from two feet upwards; they are complete and efficient Locomotives, simple in construction, and the working parts easily got at for repair; they draw heavy loads at reduced speeds. These Engines are usually sent in one package, ready for work on arrival.



LIGHT PORTABLE, HOISTING, WINDING, AND PUMPING ENGINES, &c.

ALEXANDER CHAPLIN & CO. CRANSTONHILL ENGINE WORKS, GLASGOW.

" 68, Argyle-street, Glasgow.
" 17, South Castle-street, Liverpool
" Exchange Buildings, Dublin
" 7, Frederick-street, Aberdeen.

BUILDINGS AND SHIPS EFFECTUALLY SECURED AGAINST LIGHTNING.

PATENT LIGHTNING CONDUCTORS,
according to the system of Sir Snow Harris, F.R.S. as now universally adopted in every department of the Public Service, supplied and carefully fitted in every detail, under the unmediate instructions of Sir Snow Harris, by J. W. GRAY, who has effectually secured a large number of ships, public buildings, and magazines against the destructive agency of lightning, including the Houses of Parliament, magazines, afloat and on shore, of the War Department, and many churches and other important structures. Buildings surveyed, and plans and estimates submitted, if called for.
J. W. GRAY & SON, 114, Fenchurch-street, E.C.

PROTECTION from LIGHTNING.
HART & SON

Beg to call the attention of Architects, Builders, and the Public to their

IMPROVED LIGHTNING CONDUCTORS
(SPRATT'S PATENT),

As presenting the MOST EFFECTIVE MEANS of OBTAINING SECURITY from LIGHTNING. They are economical, easily fixed, and APPLICABLE TO SHIPS and TO ALL BUILDINGS, including Private Houses, Churches, Chimney-Shafts, Dairies, Powder Magazines, &c. &c.

Price Lists and Estimates on application.

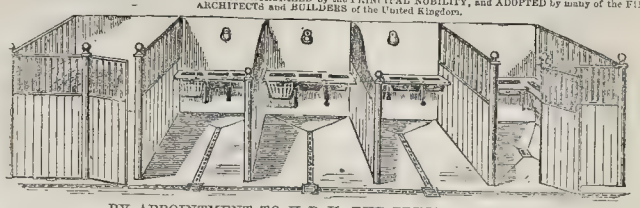
TUBE for GAS; Galvanised ditto, for Water; High-pressure Cocks, &c. Manufacturers of Dr. Arnott's Improved Ventilators.
HULETT & CO. 85, High Holborn.



PATENT WORCESTERSHIRE RANGE.

PRIZE MEDAL 1862, AWARDED FOR EXCELLENCE.
The above RANGE is most complete, and strongly recommended for its unrivalled ECONOMY, CLEANLINESS, CONVENIENCE, DURABILITY, and is a certain CURE for SMOKY CHIMNEYS.
It is an entirely new invention, and consists of large MEAT ROASTER, PASTRY OVEN, and WROUGHT IRON BOILER. The top forms a HOT PLATE for BOILING, STEWING, &c. The whole heated by ONE SMALL FIRE. One 5 feet wide is equal to an ordinary Range 8 feet wide.
Extracted from the "London Daily Telegraph," May 19th, 1862.
"INTERNATIONAL EXHIBITION, Class 31.
"Of the most recent inventions it should be said that Messrs JONES & ROWE'S Patent Worcestershire Range has attracted very special attention, and has been commended by the best authorities. A valuable peculiarity of their Ranges is the placing of the OVEN and ROASTER one above the other instead of side by side, and ROASTER is constantly replenished with fresh air."
INVENTORS AND MANUFACTURERS,
JONES & ROWE, WORCESTER,
AGENTS FOR LONDON: BARRON, SON, & WILSON
450, STRAND, W.C.
Illustrated Catalogues, with Testimonials and Prices, forwarded on application.

BY APPOINTMENT TO H.R.H. THE PRINCE OF WALES.

BARTON'S PATENT PRIZE MEDAL STABLE FITTINGS.
These SUPERIOR-CLASS STABLE FITTINGS are PATRONIZED by the PRINCIPAL NOBILITY, and ADOPTED by many of the First ARCHITECTS and BUILDERS of the United Kingdom.

BY APPOINTMENT TO H.R.H. THE PRINCE OF WALES.

J. BARTON, having entered upon the extensive Premises, No. 370, Oxford-street, adjoining his Patent Stable Fitting Manufactory, begs to solicit attention to his large and well-selected STOCK of STALL and LOOSE-BOX FITTINGS, HARNESS ROOM REQUISITES, &c.; also to invite inspection of the newly erected Practical Stable, now on view. Illustrated Catalogues on receipt of Four stamps.

JAMES BARTON, IRON WORKS, 370, OXFORD STREET, LONDON, W.

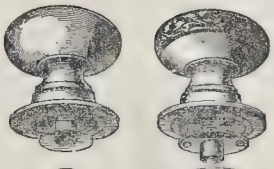
EXHIBITION PRIZE MEDAL, 1862, AND MEDAL OF ROYAL AGRICULTURAL SOCIETIES OF ENGLAND AND IRELAND

MUSGRAVE'S PATENT STABLE and HARNESS FITTINGS.
MUSGRAVE'S PATENT HARMLESS LOOSE BOXES.

MUSGRAVE'S PATENT IRON COW STALLS and PIGGERIES.

Architects who have not seen these fittings are requested to write for engravings, as they are unlike those of any other maker, and were admitted to excel all the work of their class in the Exhibition.
They can be seen in first-class stables in almost every county in England; and MUSGRAVE, BROTHERS, are now fitting several very large establishments under direction of London architects, noted for employing only what is the best of its kind.

Musgrave's Patent Slow-combustion Stove



Is the nearest approach to Warming by Hot Water. It will burn in churches from Saturday till Sunday evening, without attention during the hours of worship. In halls will burn day and night for weeks, with little care. Capable of warming a large apartment for twenty-four hours, at a cost of 3d.; and deserving of special attention because of its safety, healthfulness, durability, and extreme simplicity.—For full particulars apply to

MUSGRAVE, BROTHERS, Ann-street Ironworks, Belfast.

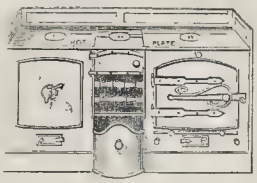
SIMPLICITY, UTILITY, ECONOMY, AND DURABILITY.

THOMAS PUGH & CO.'S NEW PATENT ECONOMIC SELF-ADJUSTING MORTISE AND RIM LOCK FURNITURE.

NUT PLATE.

J. B. SCAMMELL & CO. (late Thomas Pugh & Co.)
WHOLESALE IRONMONGERS,
13, KING STREET, SNOW HILL, LONDON.

We invite particular attention to the PATENT LOCK FURNITURE, which we do not hesitate to say is the most perfect article now manufactured, great improvements having been recently made in it. It has been extensively used in Public and Private Buildings, in Her Majesty's Pavilion and Carriages, Aldershott-Stone, newly fashioned sets without the slough failure. It is applicable to all Locks and Latches, both Rim and Mortise, and effects a most secure fastening, without any screw in the back of the knob. Perfection guaranteed in both Locks and Furniture, if the Locks are of our own manufacture.



New rich Designs in Glass, China, Brass, Bronze, Oilt, Carved Woods, Inlaid, &c. &c. or to any Design.

THIS FURNITURE MAY BE HAD WITH PLATES OR NUTS.

A most complete and extensive stock of every description of Locks, Latches, Brass Foundry, and Ironmongery, required for Buildings, of the best quality manufactured, at the lowest wholesale prices.

. Illustrations and Particulars sent on application.

WAREHOUSES FOR NAILS, PIPES, GUTTERS, &c. IN ST. JOHN'S COURT.

THE LEAMINGTON PRIZE KITCHENER.

These Ranges are strongly recommended for Economy, Cleanliness, and a Cure for Smoky Chimneys.

The Top forms an entire and efficient Hot Plate, and having an Open Fire, removes all the objections of a Close Fire-range.

A large STOCK of SELF-ACTING and other RANGES, REGISTER STOVES, and every description of BUILDERS' IRONMONGERY, at Wholesale Prices.

All Goods delivered free within Five Miles.

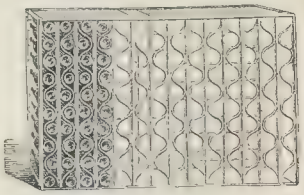
WROUGHT IRON WINE BINS.

FARROW & JACKSON

Beg to call the attention of Architects and Builders to their Wrought Iron Wine Bins, which are ADAPTED (as shown) either for BRICK ARCHED VAULTS or CELLARS with FLAT CEILINGS, the mode of fixing in either case being so simple, that they may be put up by any ordinary workman. They combine great strength with lightness and economy of space, and their DURABILITY has been satisfactorily PROVED DURING nearly FORTY YEARS.

The Shelves are formed of Plates of Iron laid on Bars, which rest on the Cross-bars of the Lattice Uprights, and are removable at pleasure.



Plans and Estimates furnished, and Cellars fitted complete in any part of the Kingdom.

*** As these Bins were the invention of the late Mr. FARROW, and great attention has been given to them by the present Firm, long practical experience enables FARROW & JACKSON to offer the best advice as to arrangement.

ALSO THEIR

NEW REGISTERED IRON BINS,

Made any size or shape, to fit any spare corner, with
SEPARATE REST FOR EACH BOTTLE,
Peculiarly adapted for Private Cellars.
No laths are required, and all trouble of Binning is avoided. The Cellular Bins may also be had fitted with light lattice doors, affording perfect security to the contents of the Bin.

Omnibuses from Limehouse Station, Black wall Railway.

THE FURNISHING OF BED-ROOMS.
HEAL & SON have observed for some time that it would be advantageous to their Customers to see a much larger assortment of Bedroom Furniture than is usually displayed, and thereby judge properly of the style and effect of the different descriptions of Furniture, it is necessary that each description should be placed in separate rooms. They have therefore erected large and additional Show rooms, by which they are enabled not only to extend their Show of Iron, Brass, and Wood Bedsteads, and Bedroom Furniture, beyond what they believe has ever been attempted, but also to provide several suitable rooms for the purpose of keeping complete suites of Bedroom Furniture in the different styles.
Japanned Bedsteads may be seen in complete suites of five or six different colours, some of them quaint and ornamental, and others of a plainer description. Suites of Stained Dead Gothic Furniture, Polished Deal, Oak, and Walnut are also set apart in separate rooms, so that customers are able to see the effect as it would appear in their own rooms. A suite of very superior Gothic Oak Furniture will generally be kept in stock, and from time to time new and select Furniture in various woods will be added.
Bed Furnitures are fitted to the Bedsteads in large numbers, so that a complete assortment may be seen, and the effect of any particular pattern ascertained as it would appear on the Bedstead.
A very large Stock of Bedding (HEAL & SON'S original trade) is placed on the BEDSTEADS.
The Stock of Mahogany Goods for the better Bed-rooms, and Japanned Goods for plain and Servants' use, is very greatly increased. The entire Stock is arranged in eight rooms, six galleries (each 125 feet long), and two large ground-floors, the whole forming as complete an assortment of Bed-room Furniture as they think can possibly be desired.
Every attention is paid to the manufacture of the Cabinet-work, and they have just erected large Workshops on the premises for this purpose, that the manufacture may be under their own immediate care.
Their Bedding trade receives their constant and personal attention, every article being made on the premises.
They particularly call attention to their Patent Spring Mattress, the Sommier Elastique Patent. It is portable, durable, and elastic, and lower in price than the old Spring Mattress.
HEAL & SON'S ILLUSTRATED CATALOGUE of Bedsteads, Bedding and Bed-room Furniture sent free Post.—196, 197, 198, Tottenham Court-road, London.

ST. PANCRAS IRON WORK COMPANY,
OLD SAINT PANCRAS ROAD, AND YORK ROAD, KING'S CROSS.

THE INTERNATIONAL EXHIBITION PRIZE MEDAL, AWARDED 1862
ESTABLISHED 1744.
AUSTIN'S IMPERIAL PATENT SASH and BLIND LINES
To BUILDERS, CARPENTERS, and BLIND MAKERS.
J. AUSTIN, Manufacturer of the above lines, particularly wishes to direct the attention of the Trade to his
IMPERIAL PATENT FLAX SASH-LINES,
of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently can not give so much satisfaction to the consumer.
They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

VIEILLE MONTAGNE ZINC.

THE ITALIAN-FORMED ZINC is much approved of by Architects and Engineers on account of its strength, durability, and appearance. On account of the light framing required, roofs, including framework and fixing, can be covered with it FOR £3 PER SQUARE up to 25 feet span. Sheds of larger span, including posts, 4*l.* per square. Architects are cautioned against allowing anything thinner than No. 13 gauge (20 oz.) to be used. ALL PLATES SHOULD BE REJECTED NOT BEARING, in addition to the Company's name, the words "ROOFING ZINC," and the gauge.

OLD ZINC RETAKEN AT HALF THE MARKET PRICE OF NEW.

For Designs and Estimates for Roofs, with Timber or Iron Framework, IRON CHURCHES COVERED WITH ZINC, and Buildings for the Colonies, apply to

THE COMPANY'S SURVEYOR,
12, MANCHESTER BUILDINGS, WESTMINSTER, S.W.

JAMES W. TYLER, CONTRACTOR FOR
DEVAUX'S VIEILLE MONTAGNE THICK ZINC ROOFING,

ON IMPROVED PRINCIPLES.

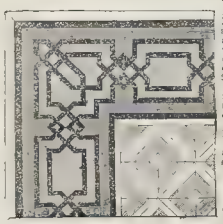
12, ABINGDON STREET, and 4, WOOD STREET, WESTMINSTER, close to Victoria Tower.

Estimates furnished for every description of Zinc Roofing and Guttering, inclusive or exclusive of Timber or Iron Framing, in all parts of England.
Having for several years been actively employed in laying DEVAUX'S THICK ROOFING ZINC (the purest extant) upon the new principles introduced by Mr. Edmeston, Mr. TYLER can refer with confidence to work done as his best recommendation.
Good Zinc badly laid will still be a failure, for there is much more importance in the mode of laying than is yet generally known; and parties who will intrust their work to Mr. TYLER will find that this important point is thoroughly attended to, and at no extra cost.
This Zinc thus laid is quite as lasting as lead, if the woodwork is arranged according to Mr. TYLER'S directions.

THE LAND SECURITIES COMPANY
(Limited)
Capital, 2,000,000*l.*

DIRECTORS.
The Right Hon. the Lord Naas, M.P. President.
The Directors of the International Financial Society (Limited), acting as a Finance Committee.

John Ennis, esq. M.P.
Sir James Fergusson, Bart. M.P.
Col. Fulke Southwell Greville, M.P.
Sir John Charles Dalrymple Hay, Bart. M.P.
Sir Lawrence Palk, Bart. M.P.
Sir Henry Strakey, Bart. M.P.
William Dargan, esq.
Henry Farquhar, esq.
Sir John Gray.
Chandos Wren Hoskyns, esq.
John Horatio Lloyd, esq.
Hon. William Napier.
Hon. Henry Petre.
Sir Charles Rich, Bart.
Granville Richard Ryder, esq.
Philip Twells, esq.

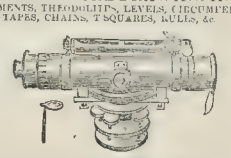


OFFICES.—Chief Office, West End, 32, Charing-cross, S.W.; Branch Office, Office of International Financial Society, No. 60, Threadneedle street, E.C.

The Company will make advances, repayable with interest, at fixed terms, or by instalments, or by terminable annuities, upon the security:—
1st. Of landed estates, first class house-property, and real property of all descriptions and tenures, and of all estates and interest therein.
2nd. Of rates, dues, assessments, and impositions of all descriptions, raised or imposed by or under the authority of any Act of Parliament, public or private, Royal Charter, Commissions of Sewers, Drainage, or other authority legal authority on the owners or occupiers of land.
3rd. Of charges and securities of all descriptions upon or affecting landed estate, and all real property and tenures, made, given, or issued, under the authority of any Act of Parliament, public or private.

For further information, and forms of application, apply to the Hon. WILLIAM NAPIER, Managing Director, the Land Securities Company (Limited), 32, Charing-cross, London, S.W.

PARQUETS SOLIDAIRES.—HOWARD & SONS, 26 and 27, Berners-street, are prepared to supply machine made patented solid PARQUET FLOORS 50 per cent. cheaper than they have been yet offered.—Illustrated catalogues, plans, and estimates free.



SOLID PARQUET FLOORS.—
ARROWSMITH'S PATENTED.

The speciality consists in being "SOLID INCH THICK:" each separate piece grooved and tongued together, and keyed at back (not veneered). Reduced in price from 5*l.* per foot. Invercesk, Is 3*l* Walnut and other Woods, from 4s 6d. As borders to Carpets; for Halls, Libraries, Billiard and Reception Rooms, Altar Floors, &c. (Warmer than stone)
SHOW ROOMS—50, NEW BOND ST. W.
Reference to numerous Works as executed during the last ten years, for the eminent architects, Messrs. W. Burn, D. Brandon, P. C. Hardwick, A. Salvin, Sydney Smirke, G. G. Scott, and others.

PARQUET FLOORING.
TO ARCHITECTS AND BUILDERS.
JACKSON & GRAHAM
Are the sole Agents in England for the superior PARQUET FLOORINGS manufactured by ANTON EMBS, of MAYENCE & COLOGNE, for which a prize medal was awarded in the International Exhibition of 1862.—Books of designs sent free by post. No charge for taking plans and giving estimates.
33, 34, 35, 37, and 38, OXFORD STREET, LONDON.

MATHEMATICAL DRAWING INSTRUMENTS, THEODOLITES, LEVELS, CIRCUMFERENTIES SCALES, TAPES, CHAINS, T SQUARES, RULES, &c

JOHN ARCHBUTT & SONS,
29, WESTMINSTER BRIDGE ROAD, LAMBETH,
Near Astley's Theatre,
Respectfully inform the Public that their Illustrated Price-List will be forwarded free on application. The prices will be found remarkably low. Every article warranted. Second hand Instruments of all kinds, by the best makers, always in stock.

The Builder.

VOL. XXII.—No. 1131.

The Coloured Decoration of Churches.

PURSUING this subject,* which is one of especial interest with many of our readers, we must return a little chronologically. At Headington Church, Oxfordshire, are found extensive and interesting traces of the original painting of late thirteenth century date. These original paintings were covered by no less than twenty-four coats of whitewash; and if these could have been peeled off entire, they would have supplied us with no less than six different series of wall-paintings of different dates. The earliest is that which we are about to describe; four others consisted of powderings of crosses, roses, and knots; the latest was of Tudor date,—we shall have occasion to refer to it in a later part of this paper. Of the original painting a great part of the entire scheme of colouring of the nave could be made out. In the arcade the arches were coloured red in the exterior chamfer, and yellow in the interior, with a scroll foliage pattern on the soffits, like that which will be seen under the windows in the drawing of the south wall. How the pillars and capitals and the spandrels between the arches were treated did not appear. Over the hood-moulding was a close masonry pattern in double red lines; and probably the rest of the spandrels were covered with single line masonry pattern. The walls were covered with decoration; that of a portion of the south wall is represented in the accompanying woodcut.† A scroll foliage pattern runs under the windows, and the space beneath this, which in other churches is frequently left unpainted, is here painted with a kind of imitation of hangings of narrow vertical stripes of different colours.

Drapery of similar character is very commonly found represented in illuminated MSS. of this period. The imitation of such hangings here suggests the possibility that the surbase of the walls, which is so frequently left unpainted, was intended to be draped with hangings. Above the band of foliage the wall is entirely painted,—a masonry pattern, of which the stones are yellow, the joists broad pink, with a centre line of white on the pink. A series of pictures are regularly arranged on the broad window splays, and other pictures are added on the wall spaces with an irregular arrangement, *i.e.*, not symmetrical with respect to the principal series, or to the wall spaces on which they are painted. The subjects of the series of paintings on the splays cannot all be made out satisfactorily: some of them seem to be incidents in the life of our Lord; but others intermixed with them seem to relate to other subjects; *e.g.*, on the left jamb of the first window the subjects seem to be the "Nativity," and the "Flight into Egypt," but those on the right jamb do not seem to belong to the same history, and are unintelligible. Again, the two upper pictures on the second window seem to be the "Slaughter of the Innocents," and the "Triumphal Entry into Jerusalem;" but the lower pictures, again, do not seem to relate to the same history, and are unintelligible. The heads, which are inserted to fill the triangular spaces in the upper part of the splays, are St. Peter and St. Paul in the first window, and a queen and a bishop, probably two saints, in the other. The east end of the nave had been entirely covered with painting. On the lower part the band of running foliage and the hangings of the south wall were continued. Above this the wall was divided by four horizontal stripes of red, on each of which was a row of half-coloured stars; the wall spaces between the stripes were produced with red stars. Over the round Norman chancel arch was painted a pointed arch of scroll foliage, on the upper part of which was a picture of the Majesty, viz., of our Lord seated, with kneeling figures adoring. We are indebted for the knowledge of these interesting paintings, and for the excellent drawings of them, from which our engravings are taken, to Mr. Herbert Hurst, of Enfield. An unusually complete series of paintings of the latter part of the thirteenth century was brought to light at St. John's Church, Winchester, in 1853, and was drawn and described by Mr. Baigent, in the Journal of the British Archæological Association for that year. On the north wall of the arch of the church the paintings reached from the roof to within 8 ft. of the ground, and extended over the whole length of the wall, interrupted only by the lancet windows. The different paintings were of unconnected subjects, and were not arranged symmetrically on the walls. Some were enclosed in a frame of marginal lines, others were not, and the blank spaces of the wall were irregularly powdered with crosses and other ornaments. First, beginning at the west end, came a grand "Doom," in three horizontal compartments, one over the other, painted with great care and in a greater variety of colours than usual—red, green, yellow, and pink. Over one of the lancets was a large circle, with two smaller circles on each side of it: in the larger circle a head of our Lord; in the four smaller circles the evangelistic symbols; and below—one on each side of the arch—two angels censing. In the next compartment is a Crucifixion, inclosed within a yellow border foliated at the corners. There is a figure on each side of the cross; but instead of the conventional SS. Mary and John, one figure is St. Francis, the other is a tonsured and cowled figure which we might have taken for St. Dominic but that his robe is red. Next to this, without any frame, is a "Crucifixion of St. Andrew," and then comes another window, over which is an angel distributing crowns. On the other side of the window is a "Virgin and Child," and then another angel kneeling and censing, but not towards the Virgin. The space of about 62 ft. between this and the last wall (which, perhaps, came within the screen of a chantry chapel) seemed not to have been painted. On the opposite wall of the same aisle there was one painting at the east end, and rather high up over a hagioscope and piscina in the respond wall which divides the chapel from the chancel. This was a very interesting painting, in excellent preservation, of the "Martyrdom of St. Thomas à Becket." Other paintings existed on the spandrels of the arcade between the aisle and church, and on the wall over it: their curious arrangement is represented in the woodcuts which illustrate Mr. Baigent's paper in the *Journal of the Archæological Association*, vol. ix. A vertical border of scroll foliage marks the commencement of the paintings at the west jamb of the rood door. A similar band of foliage runs over the points of the arches, and there is a series of paintings very much defaced and undecipherable in the long horizontal compartment between this band and the roof. Then the spandrels were occupied with other single subjects, of which one remained tolerably perfect, and is represented in the drawing. The way in which this subject is supported on the hands and head of a crowned sitting figure is very curious.

A series of paintings at Battle Church, Sussex, probably of early fourteenth century date, gives us other modes of arrangement. One series is on the clerestory wall, between the windows. The wall spaces, which are almost square, are divided by two vertical lines crossed by one horizontal line into six compartments each, and there is a subject in each compartment; there is also a saint painted on each of the window splays. The east end of the nave is also painted. The space between the tie-beam of the roof and a little above the spring of the chancel arch is divided into two long horizontal rows of saints under canopies. The wall-space above this, between the tie-beam and the rafters, is occupied by two subjects of the popular Triumph (or Dance) of Death. The paintings are executed in red outlines, with occasional flat tints of red and yellow.

In a chapel of Notre Dame des Pas, in the churchyard of St. Brelade, Jersey, which is interesting as an example of the detached chapels which used not unfrequently to exist in churchyards, there are some interesting paintings of the fourteenth century. The building itself is very plain, and devoid of architectural ornament; its plan is a simple parallelogram, with a plain Pointed vault. The paintings were apparently confined to this vault. Along the apex of the vault is a line of scroll foliage. Each side of the vault is divided into three long horizontal lines of painting, executed in red outlines with considerable artistic skill, on the ground of pale buff-tinted plaster, the subjects running continuously without separation, as in the Bayeux tapestry. On the north side the subjects, so far as they remain, seem to relate to the Passion of our Lord. Beginning at the west end, we have first the "Trial before Herod." Herod is sitting on a throne in the costume of one of our Royal Edwards, with a scroll above him, "Herodes Rex." Our Lord is between two soldiers in the costume of fourteenth century men-at-arms. The next subject is the "Binding of our Lord." The second row begins with the "Scourging;" next the "Bearing the Cross." The lower line of painting is obliterated. On the south side of the vault the subjects, so far as they remain, relate to the Nativity. Beginning at the west end, in the first subject is seen a portion of a royal figure, but the subject is so far obliterated as to be undecipherable. The next is an "Annunciation." At the west end of the chapel is a "St. Michael weighing Souls." The vacant spaces in the background between the figures are powdered with a very simple pattern consisting of five small circles.

When we come to the fifteenth century, there do not seem to be nearly so many wall paintings as in the fourteenth century, and many of them seem to be merely decorative. In very many instances, the original Early English and Decorated paintings have been washed over, and the walls covered entirely with powderings of roses, fleurs-de-lys, and other patterns. One of the most complete series of paintings of the time which has come under our notice, is that in the lady-chapel, Winchester Cathedral, which is of unusual merit, and in very good preservation. They occupy the space between the windows and the floor, and are arranged in two rows, framed in a painted architectural panelling: pillars divide the wall-space into compartments, with a flat cusped arch; each compartment is divided into two panels by a transom, and the upper angles of the lower panel are also rounded off into a flat arch. The subjects, which possess great artistic merit, appear to be scenes from some legendary story. They are engraved imperfectly in Carter's "Ancient Painting and Sculpture," and more accurately in the Winchester volume of the British Archæological Association. The piscina has its architectural features decorated with painting, and a subject painted at the back of its niche.

* See p. 724, *ante*.

† See p. 741.

On the south wall of Hadleigh Church, Essex (whose thirteenth century paintings have already been noticed), to the east of the south door was a large painting of St. George, rather finely designed and executed,—an unpublished drawing of it is in the collection of the Essex Archæological Society. The fine picture of the "Incredulity of St. Thomas," painted on one of the Norman piers at St. Alban's, has already been noticed. At St. Laurence's Church, Melcombe, near Banbury, opposite the north door, was a painting of the martyrdom of the patron saint. On the north wall of the nave were two horizontal rows of paintings which have been conjectured to represent the seven deadly sins. They are of the time of Henry VII.; drawings of them, which are, we believe, unpublished, lie before us.

At St. John's Church, Winchester, there were two or three figures (fig. 14, p. 740) well executed in black outline on white, and set in a red ground. From the same series of paintings we obtain one of our few examples of merely decorative wall-painting of this century. It is a powdering of alternate crowns and oak sprigs on a red ground * (fig. 15). Another wall pattern of leaves springing from ascending spiral stems we give in the woodcut from Beckley Church, Oxon† (fig. 16).

One of the most complete examples of this style of decoration we obtain from the fine late Perpendicular church of Great Coggeshall, Essex. "During the restoration of this church," says the Rev. Edward L. Cutts, in a paper read before the Royal Institute of British Architects, which we have already several times quoted, "I looked carefully for all indications of its original coloured decoration, and I think that its entire plan could be made out. The plan of the church is chancel and nave, with aisles running through from east to west, west tower, and north porch. Colour seems to have been very sparingly applied to the architecture. The walls generally seem to have been left unpainted, with only a line of red in the moulding round the edge of the window splays. The bell of the capitals of the pillars was coloured red. The arches across the chancel and its aisles had a few stripes of plain colour, chocolate, bright red, and yellow. The east walls of the chancel and aisles had been painted over with a tapestry-pattern of a character common about the reign of Henry VII., which pattern returned a short distance along the adjoining walls to form an enrichment above the altars." [We may here add that on the wall face to the left of the window of the north chancel aisle there were traces of a different tapestry pattern, powdered with sprays of a flower with leaves like a wild anemone, which was also a common pattern at the same date.] "There was, moreover, a whole series of dedication crosses on the walls of the chancel aisles beneath the windows, all alike,—a cross patée within a circular rim, the cross dark red and the rim dirty grey (probably faded green). There were two under the windows of the north wall of the north chancel aisle, and one higher up on the right side of the east window of that aisle; one under the east window of the south chancel aisle, and four others under the windows in the south wall; in the absence of other paintings this series of crosses must have been conspicuous. It will be seen that there is very little painting indeed; and for that very reason I think it is worth noting, as a proof that in a fine, large, handsome church the system of decorative colour was sometimes of a very simple character. I presume the painted glass in the numerous and large windows afforded abundance of colour of the most brilliant kind, and it was desirable that the wall-spaces between should be left plain as a foil to the glass paintings, with only a line of colour here and there to give emphasis to the chief architectural features, and to carry the colour into the body of the building."

We may mention one example of groining decoration of this period; it is in the north chancel aisle of St. Alban's. The groining ribs are picked out with red; four rays of masonry pattern, of which the intersecting boss is the centre, extend into the spandrels of the vaulting, and across each ray is written a large *tfje* in what now looks like black, but may be discoloured red lead. The greater part of the painting of the fifteenth century is to be found on the woodwork which was so largely introduced during this period, viz., on rood-screens, roofs, pulpits, &c., and on tombs. It is generally much more elaborate in design and brilliant in colours, and more minutely finished, than the bold distemper paintings on the walls. It is a very extensive branch of the subject into which we have not space to enter; and we leave it untouched with the less regret that a considerable number of excellent examples of it are easily accessible in Mr. Blackburne's "Decorative Painting" and Mr. J. K. Colling's "Examples of Gothic Ornament."

The Tudor painting at Headington, Oxon (whose Early English painting has already been noticed), was unusually elaborate. The pillars had been painted in broad stripes of deep red and yellow, each 8 in. wide, from top to bottom. The capitals had dark red in the hollows, and a few red cinquefoils painted at intervals in the hollow of the bell. The chamfers of the arches were also red, and over the hood-moulding of the arches was an engrailed border in black, each point of the engrailing terminating in a rudely drawn trefoil. An example of this bordering will be seen over the south door, in the large engraving of the Headington Early English paintings. The same border was used over all the windows and doorways. The narrow piers between the windows on the south side had an ascending wavy line of black, branching at top into three flower-stalks, supporting three Tudor flowers, all black (fig. 17). All the window splays were crossed with diagonal bars in black outline, budding out at about every foot into semicircles and trefoils. Some black and red hangings to the left of the south door (over the "St. Christopher" in the drawing), seemed to belong to this period, but the chief decoration of the walls seemed to be black-letter texts, surrounded by red borders; in one instance the border consisted of a red stem, with green ivy leaves springing from it, which, however, was poor in execution and effect.

The Jacobean texts which were written on the walls, and which from the last style of mural decoration, often have ornamented borders, were found at Hadleigh Church and at Little Braxted Church and at Kelvedon Church, all in the county of Essex. The accompanying woodcut (fig. 18) is from an ornamental border on the wall, a little above the level of the seats, which formed part of this Tudor decoration at Kelvedon. We may note here that the Lord's Prayer, the Creed, and the Ten Commandments, as originally written in obedience to the Canon, still remain in some cases, at the east end of the church, *i.e.*, of the nave, *e.g.*, at Bradfield, Essex, where they are written on a boarding (probably original) over the rood beam. The latest text we have met with is in Langdon Church, Essex, of the time of the Restoration of the Monarchy and the Church after the Commonwealth; it runs along the west side of the rood beam, over which the arms of King Charles II. had been put up; and the text chosen to be thus placed in sight of all the people is significant:—"My son, feare God and honour the King, and meddle not with them that are given to change."

THE GREAT EXPLOSION; AND THE BREACH IN THE RIVER-EMBANKMENT.

Warnings of danger to this metropolis from the storage of large quantities of gunpowder, even at places so distant as Purfleet, Plumstead, or Belvedere, have been occasionally uttered,—though they have not received the same attention as those referring to the accumulation of petroleum and other combustibles, in buildings amongst the streets of London. But the magnitude of the danger has been demonstrated since our last number appeared; and consequences hitherto unapprehended, involving, from the particular explosion, the inundation of a large area of valuable reclaimed land, and that of the extensive low-level inhabited districts in the south or south-east of London itself, besides injury and delay to the sewerage works, have been averted only through a most fortuitous conjuncture of circumstances, the presence of mind and the skill of one or two individuals, and the immediate energy and laborious exertions of a great force of men.

On Saturday morning last, at about twenty minutes before seven o'clock, there occurred at a certain spot on the southern bank of the Thames, near Belvedere, and distant about one mile above the church of Erith, and the same distance below the reservoir and Outfall of the whole Main-drainage of that side of the river, an explosion of a quantity of gunpowder which appears to have far exceeded in the amount, that of any explosion in time of war, whilst the sound and concussion reached to places at a distance of eighty, ninety, or approaching one hundred miles. The quantity is estimated to have been 1,040 barrels of 100 lb. each, or in all nearly 16½ tons. It was contained in two magazines, which stood close behind the embankment or river-wall of the Thames, and in two barges outside; but the quantity that was in one of the buildings formed a considerable portion of the whole, and amounted to 750 barrels. The destruction of life, or personal injuries, by the explosion itself, fell almost exclusively upon the few individuals, and their families, who were in charge of the magazines, or on board the barges, or engaged in the work of loading or unloading; and it may not have exceeded about twenty individuals, five of whom are dead whilst we write, and five are "missing" or represented by fragments of heads, arms, feet, or mere pieces of flesh. Individuals not connected with the magazines, nor on board the barges, however were killed or injured; amongst the killed being two men who were at the time about proceeding to their work in certain repairs to the river-wall at a place adjacent to the scene of the explosion. The destruction of property however was immense; though it is rather to be realized from the accounts, albeit inadequate, than discovered by a visit to any single spot. Where stood the buildings, there are now scarcely ruins, and the bricks of the magazines strew the ground as so many pieces cleaned of their mortar, better than could have been done by hand. A wide cavity in the earth shows where stood the principal building, a substantial structure, belonging to Messrs. John Hall & Son, of the Faversham Mills, and about 50 ft. square. It was erected five or six years ago, at a cost of about 3,000*l.* The other magazine, variously stated as about 60 or 70 yards distant, or as about 300 or 400 yards, belonged jointly to the Elterwater and the Lowood Gunpowder Companies, and measured about 40 ft. by 30 ft. Each building was in two floors, and had a wooden jetty for the unloading and loading of vessels. The other buildings were three cottages, occupied by the two storekeepers, one of whom is living, and by the workpeople, and were at some distance from the magazines. The barges were blown into fragments, which fell into the river, or, with some portions of the buildings and their furniture, and of human limbs, were projected to incredible distances. Some of the business-papers were carried into Woolwich Arsenal, distant four miles. This latter place was, by the inhabitants of Woolwich, at first thought to be that of the explosion. The embankment-wall, for about 300 ft. in length, was forced into the river; and the marshes of Erith and Plumstead, and parts of London itself, which the water covered before the period of authentic history, were laid open to the rising tide. The consequences of this portion of the calamity, to which we have alluded, have at present been averted, as we have said; but in their full extent, they are to be estimated only by professional readers, acquainted with the districts in and east of London, and their levels, with the formation of the banks of the Thames, and with the accounts of some previous breaches. Now, the public mind rests impressed chiefly with the recollection of the concussion, and with the facts including those of the injury done in the villages of Belvedere, Erith, and Plumstead, in the town of Woolwich, and in parts of the eastern and southern districts of the metropolis proper. Glass was broken, and window-frames were forced in; so that in Belvedere, distant about three-quarters of a mile from the magazines, and in the other places, houses have been rendered uninhabitable. Ceilings and chimney-pieces were broken, and walls were so shaken, that at least one house, and this one at a considerable distance, has since fallen. Even in London, in the Minories and Aldgate, plate-glass was broken; whilst at the Crystal Palace a door was burst open; and in Norwood, a house that was in erection has been greatly injured. Such effects as these last were experienced at distances of ten or twelve miles. Though three distinct shocks are reported to have been felt, the almost instantaneous spread of combustion from grain to grain of the powder, barrel to barrel, floor to floor, and building to building, is surprising, even with the knowledge of the properties of gunpowder, and the infinitesimal thread of a train, or leakage, that suffices to establish a connexion between one enveloped quantity and another. The occurrence will doubtless receive attention from men of science;

but we may note that one statement refers to the falling down of grains of powder apparently unconsumed.

It is now seriously discussed, whether the storage of large quantities of gunpowder in places distant but one mile, or even ten miles, from a populated district, should be permitted. Half-way between the site of the catastrophe, and that of the Southern Outfall of the sewerage, is another magazine, to which happily no matter in combustion gained access, though glass was broken. Tiles were blown from roofs of buildings further distant. Close adjoining the property of the Metropolitan Board of Works, is yet another magazine, which was empty, but to which the attention of the Board is, we believe, pointedly directed. Further west, or above Crossness Point, is still another magazine, this last belonging to Government.

The chimney and buildings of the Outfall-works, received no damage, beyond that of the fracture of plate-glass of the value of about 150*l*. But had the marshes been inundated, the Outfall-sewer itself, with its numerous ventilating-shafts, as well as side entrances,—and without considering the existing state of the several channels in connexion with the reservoir,—would have been flooded; and the sewage would have been dammed up, even as far as Battersea. The invert of the sewer at the outfall, is 28 ft. 6 in. below the high-water level; whilst the surface of the ground where the engine-house and other buildings stand, is itself 6 or 7 ft. below the level. A breach in the embankment, beyond the jurisdiction, or works, of the Metropolitan Board, is thus seen to be a serious matter of consideration. Fortunately, on this occasion, there was a body of workmen who were able to proceed at once to the scene of the disaster.

Every circumstance of time and tide, availability of competent direction, presence of men at the works of the Outfall, vicinity of a great and disciplined military force with tools and appliances, and even the soil at the spot, happened to be favourable; and a more serious disaster than has occurred within recollection, by a breach in an embankment of the Thames, was by the greatest exertions staved off, and at length was, as we have said, averted. The manner in which the whole business was conducted, merits record in these pages; and the instance may be instructively compared with the experience of previous accidents as related in various books, where the loss to landowners, and the injury to the navigation of the Thames, through the years' duration of breaches, and by the repeated failures of attempts to close them, is graphically related.

In our volume for 1855, under the title, "Some Memorials of Father Thames," we published a series of papers in which will be found much historic and other information concerning the river; and in 1861, in two of our numbers, we printed a communication from Mr. C. H. Smith, on "The Present and Past Boundary of the River Thames at London," which contains some matter having a particular connexion with the present subject. Later in 1861, appeared Mr. Samuel Smiles's "Lives of the Engineers," in which considerable attention is given to the early attempts in embanking and draining in England. The efforts made about the seventeenth century were greatly due to foreigners, more especially the Dutch. Holland furnished to us the chief engineer, Cornelius Vermuyden, (who was knighted,) much of the capital, and a large number of the workmen. Vermuyden's name is connected with the reparation of breaches in the Thames, as also is that of Captain Perry, who stopped the Dagenham Breach. Perry's name, like Vermuyden's, holds honourable place in Mr. Smiles's volumes. Much of the information about early attempts in embanking is derived from Sir William Dugdale's "History of Imbanking and Draining Fens and Marshes;" and Perry's operations at Dagenham were the subject of a book by himself to which we shall refer shortly. The matter which this latter book in particular contains is not simply interesting at the present time; it is highly instructive for the future.

Whatever decision may be arrived at as to the required distance between powder-magazines and dwellings, it is quite clear by the recent occurrence, that they should not be placed close behind sea or river walls, and below the level of the top thereof, on land that has been reclaimed, and is lower than the highest level of the tide or stream. To place them so, is simply to ensure at some day, the blowing in of the embankment to the river, and such danger as has been run at Belvedere. When we come to notice Perry's labours, we shall find his account of them suggestive now of several points that require attention, beyond the matter of the location of powder-magazines.

Even residents in London require to be reminded that the Thames, in its present course, is to be considered, as it has been called, an "artificial river," almost throughout the distance from Richmond to the sea. But a walk along the top of the embankment-wall, as below North Woolwich on the one side, and Plumstead on the other, must set any one of an engineering turn wondering about the time when, and the people by whom, a work altogether so stupendous as the embankment of the Thames and reclamation the embankment of the marshes" was achieved. The earliest of references to the embankments speak of breaches in them, and thus point to a still earlier period as of their formation. Sir William Dugdale thought that they were works of the Romans, the Britons being unequal to them, and the Saxons likewise. Sir Christopher Wren, as reported in the "Parentalia," also concluded that these embankments were Roman, the Saxons being too much busied with Continental wars. The late Mr. James Walker, in one of his reports to the Navigation and Port of London Committee, in 1841, spoke of them as works of the Britons under Roman superintendence. Mr. R. P. Cruden, in his "History of Gravesend and the Port of London," doubts whether the Romans had sufficient inducements to construct such works, asks why the earliest notice of them is not till later than the Norman Conquest, shows by allusion to Romney Marsh, that the Saxons were capable of the execution of embankments, but finally rejects the Saxons, as well as Gundulph. He quotes from Hasted's "History of Kent," a record of the foundation of an abbey at Westwood, about a mile and three-quarters westward of Erith Church,—the spot being represented as "at the edge of the marshes;" and a coincidence with a similar foundation and position in the case of the Abbey of Stratford, in Essex, suggests to him the probability that the embankment of the Thames was commenced about the time when these monastic establishments were founded, in the twelfth century; and he says, "these were not attempts to grapple with the difficulty of restricting the channel of the river, but a beginning at the foot of the uplands to make gradual approaches to the great line of embankment that was ultimately executed."

The earliest printed statutes relating to embankments, are of the early part of the thirteenth century, in the reign of Henry III.; but they refer to laws of a previous period. They tend to show that in the reign of Henry II., or between 1154 and 1189, embankment had become an object of public importance. According to Crudon, Lambarde in his Perambulation of Kent (edit. 1596) "says that the Annales of St. Augustine do report, that in the year 1279, the Abbot and Convent of Lyesnes (Lesnes near Erith,) enclosed a great part of their marshes in Plumsted, and that within twelve years after, they *inned* the rest also to their great benefit, and this it may be contended, means, that between the years 1279 and 1291, the wall of Plumsted level that restricts the channel of the river, was completed." On this evidence says the same writer, it must be presumed that the embankments between London and Gravesend were commenced early in the twelfth century by easily executed approaches; were extended in the reign of Henry II., between 1154 and 1189; and were generally completed in the century following.

The appearance of the marshes between Crossness Point and Erith, certainly favours the correctness of this view, of the gradual reclamation. Old embankment lines may be seen or traced; although none of them, probably, would have been perfect, so as to have stemmed the tide, on Saturday last, had it not been kept out at the spot where the breach occurred. In the formation of the Outfall-sewer, several of these lines were cut through, and were found to have been originally well constructed, with proper clay-puddle in them. In several of the *levels*, as the divisions of the marshes are called, on the north side, the inland lines are not very conspicuous. The main or river-wall, and the sluices to let off land-water, or irrigate the marsh, of course have to be kept in repair. Lengths of the embankment, extending many miles, are under the control of one or other Commission, the members of which generally have not much practical acquaintance with engineering-work, but who keep some men employed patching, though too few in number, of course, to cope with any great disaster. Some of these men were engaged on Saturday last, near the scene of the explosion, as already mentioned. The Commissioners of old time had power not only to distrain for rates, but to impress labourers to repair.

Until recent times, breaches in the embankment, on each side, were frequent. Mr. Smith, in our pages, gave a list, compiled from Dugdale, of fourteen of them, as well authenticated, commencing in 1295 in the time of Edward I., and ending with the breach at Dagenham, which occurred in 1707 in the reign of Queen Anne. There must however have been many others. One in particular, we find mentioned by Cruden, on the authority of Lambarde, as having occurred in 1527, when the river made an irruption at Plumstead and Erith, and so much land was submerged, that it was not all regained till after 1590, notwithstanding there was provision by statute that money should be raised to defray the charge. There are ponds, and an inland embankment, as indications of one breach, at a short distance east of the Outfall-works. Another inundation, not amongst the fourteen of the list, occurred on the north side. It flooded the whole level between Purfleet and Grays; and amongst the results was the formation of a shelf which, we believe, still obstructs the navigation. Breaches at Bermondsey were numerous.

The breaches were liable to occur when a north-easterly wind blew; and we may form some idea of what would have been the effect of the wind that has been blowing since Saturday last, had the gap at Belvedere not been closed, or had the new work not been of a substantial description.

In the time of Henry VIII., the marshes of Plumstead and Lesnes, now the Woolwich practising ground, were submerged by water coming from Erith Breach; and for a considerable time all measures to reclaim them were ineffectual. Combe Marshes, east of the palace at Greenwich, also were inundated. One Acontius, an Italian, reclaimed some portion of these; and Baptista Castilione another portion. We were not then very clever in engineering, and did not become much better up to Perry's time. The first Italian was rewarded with a grant of 400 acres of the land.

Mr. Smith's statement in the first portion of his communication, relative to the absence of record of any breach from the time of Henry VIII., to the date 1707, is not exactly borne out, even by his table. The Isle of Dogs was often overflowed; and perhaps it is owing to the desire to preserve the position of Deptford Dockyard, that the river has been kept by artificial means to the course round this low land. When the breach occurred at Limehouse in 1676, houses were swept away by the current which ran across. After a breach at West Thurrock, the water remained on the marshes during seven years; and the breach, and lake, are still marked on maps. The long bank forming the frontage to the Dagenham and Barking Levels, was particularly liable to be burst through; and, says Mr. Smiles, the whole valley of the Lea, and that part of Essex were frequently under water. This, however, we have seen sometimes in late years, without the occurrence of a breach. Vermuyden was employed in 1621, to stop a breach at Dagenham, having been invited to England for the purpose. He recovered a large area; but there seem to have been other breaches from time to time. Finally the great breach occurred in 1707, at the spot, still known as Dagenham Breach, which is exactly opposite the Southern Outfall of the London sewerage. It remained open for thirteen years, during which many efforts were made to close it. All these proved abortive, till Perry, at the end of eight years, undertook a contract, and in five years more succeeded. He had nearly failed, however, several times, and was involved in serious losses. His description of the breach, and of the measures which he took, given in an 8vo. volume of 132 pages, with a plan, is valuable as an engineering record, and is particularly important just now as showing what might have occurred at Belvedere, and what attention to the state of the embankments generally and sluices, still is needed. The volume is scarce; but we have a copy now before us. The title runs:—

"An Account of the Stopping of Dagenham Breach: With the Accidents that have attended the same from the first Undertaking. Containing also proper Rules for performing any the like Work. And Proposals for rendering the Ports of Dover and Dublin (which the author has been

employ'd to survey) commodious for Entertaining large Ships. To which is Prefix'd A Plan of the Levels which were over-flow'd by the Breach. By Capt John Perry. London: Printed for Benj. Tooke at the Middle Temple Gate, in Fleet-street, and sold by J. Peele, at *Lock's-Head* in *Pater-Noster Row*. MDCCXXI."

In describing the breach, as he found it, Perry says:—

"And first, As to the Nature and Extent of the Breach. It was occasion'd by the blowing up of a small Sluice or Trunk, made for the Drein of the Land-Waters in the Banks of the *Thames*: And might, if proper and immediate Help had been apply'd, have been easily stop'd with a small Charge; the Ditch, or Drein, of the Marsh Grounds, which led to such Sluice, being at the first blowing up of the Sluice, not above fourteen or sixteen foot broad, and might, in a Day or two Days time, have been easily stop'd, by the bringing on a small Dam in Form of a Semicircle, to the *Thames* Wall, if many Hands had been set to it, but through the Neglect thereof, the constant Force of the Water setting in and out of the Levels, soon made the Gap wider, and when it once came down to the Moor-logg, Gravel and Sand, which lies but a little way below the common Surface of the Levels, the Water then gulf'd to such a depth, and took such Power, that there was no Remedy found for the mastery of it.

"It is now about Fourteen Years since the Breach happen'd, and it has in that length of Time worn and spread it self into several large Branches, like the natural Arms of a River, by the Force and Fall of the Water, returning from off the Marsh Ground upon every reflux of the Tide; the longest of which Arms is above a Mile and a half in Extent, and in some places is 4 or 5 hundred Foot in Breadth, and from twenty to thirty or forty Foot depth. There is by Computation, about a hundred and twenty Acres of solid marsh Ground, washt into the Thames, in manner above mention'd, the surface being compass'd of Bay-e Ground, the next Moorlogg, then about a Foot or fifteen Inches blue Clay, and afterwards Gravel, and a sort of Quick-sand, as it has been esteem'd by the Undertakers before me, but I have found no other than common Gravel and Sand."

Perry proceeds to explain how "this sullage," driven into the river, was deposited at the mouth of the breach, and above as well as below it, in the reaches of the Thames. He remarks that the deposit had been particularly detrimental to Erith Reach; and that even in Woolwich Reach, as he had been informed, the depth of water was lessened. All breaches, he observes, must be attended with a considerable flow of "sullage" into the river. After mentioning breaches that had occurred, before his time, including one in "the Levels of DAGGENHAM Beem, not three Years and a half since," and several near Daggenham since he had been concerned there, he says, he attributes all such breaches not to any damage from the tides washing down or running over the tops of the banks or wells, but to the "bad Workmanship, decay, or defect of the Sluices or Trunks which are made for the drein of the Levels," &c.; and he alludes to sluices made of wood as "a prevailing Custom in ENGLAND," and as generally insecure and unskilfully placed. He recommends, therefore, a law to oblige all sluices on the banks of the Thames to be made "with Stone Cemented with Tarras." The reasons why they have not been made so, he thinks, are, first that men in England are not very willing to depart from the way of their fathers; and secondly, the matter of foundations. He argues however that if the foundations were constructed after the manner of buildings in Holland, the sluices might be formed of stone, or a sort of brick, as in Holland and Flanders, and might endure thousands of years. Perry's advice does not seem to have been attended to: at least, we have observed that sluices or penstocks of wood, are still existent. The construction of these is sometimes of the most primitive character; and many of them are quite out of repair; or, in some cases, the wood is rotten.

The breach in 1707, beginning with the failure of a sluice that had been allowed to get out of repair, quickly extended from the gap of 14 ft. to 16 ft., and ultimately led to the obliteration of about 1,600 acres of land. But that was not all: about 120 acres were washed away, as above described by Perry; and the soil formed a bank about a mile in length, and reaching half-way across the river. Perry gives a somewhat humorous account of the means adopted before he became connected with the work, such as sinking old ships filled with chalk and stones; and he shows that such devices rather tended to produce scour underneath the vessels or stones, and the still further scooping out of the soil, and its deposition in the stream.

The great destruction of property, and probably of life, and the loss and delay which we have endeavoured to convey an idea of, would have ensued from the breach at Belvedere, but for the circumstances to which we have alluded, and the course immediately taken. When the explosion occurred, it was the most fortunate circumstance that the tide was low; but there were only about four hours wanting to the time of high-water. The explosion had forced the greater portion of the materials of the embankment, in the 300 ft. of length acted upon, into the river, only throwing up on the foreshore a low mound, not capable of affording any protection. In the 300 ft. gap which was formed, the space which had been occupied by the foundation or base of the embankment-wall was filled with broken and shapeless masses of earth or clay, which had formed part either of the consolidated mass of the wall, or of the site of the magazines. The few men who were engaged on another portion of the embankment, were, at the moment, the only hands available for work obviously necessary for the exclusion of the rising tide, but which to be finished, not in the most substantial way, in three or four hours' time, demanded the labour of many hundred men.

Amongst the residents of Erith, who were all roused by the explosion, was Mr. Lewis G. Moore, an engineer who has been connected with Mr. Furness, in the contrivance of some of the means of executing the work of the Thames Embankment of these present days. Led to the spot, he immediately saw and appreciated the impending calamity, and recognized the necessity of setting to work a much larger force than that of the few men who were at hand. He at once despatched his card, with a hurriedly written request, to the resident engineer of the Main-drainage works, or his representative, to bring immediately all the men, with barrows, picks, spades, and other requisite tools, that he could muster.

The explosion had startled every one at Plumstead. Mr. F. R. Houghton, one of the engineering staff of the Metropolitan Board, and representing Mr. Grant and Mr. Bazalgette, is resident there; and he was aroused, and was soon on his way. He was met by Mr. Moore's messenger. The men at the Outfall-works seem to have had the idea at once, that their services would be required; and they started, about 400 in number, on the moment that Mr. Houghton gave the order. To both Mr. Moore and Mr. Houghton the highest praise that we could give them would not be too much; and the first of these gentlemen has most deservedly received the thanks of a public meeting at Erith. Whilst Mr. Houghton, with Mr. Webster's navvies were on the way, and immediately upon their arrival, Mr. Moore directed the filling-in of the interstices of the lumps of earth, with puddle, rather as the best extemporized foundation, than as a sufficient substitute for a properly consolidated one. The work was punned in and rammed as well as time would permit; but it became evident almost immediately to Mr. Moore and Mr. Houghton, that the force under them would be insufficient. They then forwarded a communication to Major-general Warde, the commandant at Woolwich; and the result showed that "the system" must have undergone a change calculated to gratify the people of England; for, by half-past nine o'clock, detachments of sappers and artillery, to the number of about 1,500, were on the ground, with appliances of military engineering. They were under the immediate command of Colonel Hawkins, of the Engineers; but General Warde was also present. They were followed by the 5th Fusiliers and the Marines, some of the force being necessary to keep the ground; for, as the day advanced, great crowds were attracted from the surrounding places and from London. A considerable amount of work had been done before the troops arrived; but it was necessarily hurried, as it was essential to keep above the rising tide. The work contended with the tide, to use the words of those who were present, "inch by inch;" but it was kept always above the tide.

The troops brought with them a few thousand bags, such as, filled with sand, are used in the construction of sand-bag batteries; these were filled with clay, which was fortunately to be had by digging; and the bags were passed from hand to hand, and laid in the form of an arch on plan, to make the landward-side of the upper half of the embankment, puddle being filled in between them, and the whole being rammed down, now in a more complete manner than had been possible at first. At length, about two or three o'clock, the work was completed, having withstood the tide. In the night of Saturday, it sank, as had been expected, 6 or 8 ft., and water trickled through. The military and navvies were actively occupied, backing up and ramming the work, on Sunday, when the embankment was exposed to the waves washed by a heavy gale, and stood the test. Next day, we believe, it passed into the hands of the Dartford Commissioners, when a band of navvies were engaged, still further consolidating; and the work was reported as secure as the original wall. On Wednesday, however, there were still 200 navvies engaged; and it had been deemed prudent to fill up the hole in the foreshore, caused by the explosion of the barges, with chalk stone, of which 100 tons were thrown in. At one time, on the Saturday, the danger seemed so imminent, that Mr. Moore proposed, if he did not actually make arrangements for, the scuttling and sinking of a dozen barges loaded with clay, to form a breakwater in front of the breach; but this arrangement, if Perry's reasoning on his experience at Dagenham be correct, could have been only a forlorn hope; as there would have been scour under the bottoms of the barges; and, in two or three tides, a deep channel might have been scooped out.

The manner in which the military went to their work, elicited the admiration of all who saw it, including that of the navvies; and the civil engineers named, have expressed their warm acknowledgments. It is evident that without the force and dicipline of the great body of men brought upon the ground on Saturday, and again on Sunday, the previous labour (not bating a particle of the credit due for it) would have failed to cope with the difficulty.

How the matter of accounts with Mr. Webster, is to be settled, we have not heard; but there seems some doubt whether actions will lie against the proprietors of the magazines, by any of the parties who have suffered, or whether the insurance offices can be expected to treat the injuries to property insured only against fire as having resulted therefrom; though one or two offices are understood to be ready so to consider the injuries.

We have hinted that there is some reason to apprehend that the embankments of the Thames, which are said to make in the total 300 miles, are not as they should be for security. The danger averted, -and, as we have shown, through a most fortuitous conjuncture of circumstances, —will we hope incite the several Commissions, and the Conservators of the Thames, to consider whether better survey, and more frequent reparation of the embankments and sluices are desirable; and whether it would not be well to prevent such risk as is proved to be incurred by the storage of gunpowder in a position where explosion may cause a breach.

We are sorry we are unable to agree with some of our contemporaries respecting the arrangements of the Railway Company on Sunday. Giving all praise for the rapidity with which the military were despatched from Woolwich; the arrangements, with the single exception of the not despatching a train from a station before the line was clear, seem to have been made expressly to lead to accident. Tickets, down, were issued at the intermediate stations to crowds for whom there could be no room; and the journey was in consequence, a continual battle between those who had seats, and those who thought their tickets gave them a right. Instead of only one carriage being on fire, we know that there were several. On these occasions, the metropolitan police should be called in to assist the porters and railway-police. The force at Belvedere, on Sunday, however, was quite inadequate; and many of the men were withdrawn to London, before the chief need for their services was experienced. Disgraceful scenes at railway stations, on Sunday nights, are not unfrequent: they tend to accidents such as occurred at Belvedere and Plumstead stations on Sunday last; and they discourage respectable persons from travelling. There is some defect in the reporting arrangements of a section of the daily press; so that a report (the same appearing in several papers) is allowed to state what the writer saw, as being the whole of what took place.

WEDGWOOD INSTITUTE, BURSLEM.

CERAMIC ARCHITECTURE.

LAST week six tenders were sent in for the erection of the proposed Wedgwood Institute; and were of the following amounts:—4,293*l.*, 3,739*l.*, 3,671*l.*, 3,562*l.*, 3,497*l.*, and 3,360*l.* The lowest, which was that of Mr. T. B. Harley, of Burslem, was accepted.

Our readers may remember that the committee advertised for designs for the façade of the Institute in ceramic manufactures, and that Messrs. Edgar & Kippell, of London, obtained the first premium. The committee found that

the design of those gentlemen was impracticable on account of the expense. They were, therefore, desired to prepare another design for the decoration of the façade; and this has been done by Messrs. Edgar & Kippell, to the satisfaction of the committee and the judges.

We give a description of the proposed front in the designers' own words:—

"To fulfil certain requirements, we have been commissioned — after receiving the first-prize design in the late competition—to prepare a design for the ceramic decoration and external arrangement of the Wedgwood Institute. The task was one which imposed many difficulties on us; and these chiefly arose from the circumstance that the main condition on which we had to work was a strict adherence to the plan prepared for the internal arrangement of the building by its architect, Mr. Nichols. Whatever features of external effect we might have been disposed to introduce were bound to be subordinate to the fixed and approved design of Mr. Nichols, who must necessarily look at the building from a different point of view.

The most insuperable of these difficulties, as they occurred to us, was the omission of all windows or other openings in the first-floor wall of the building, the whole of the front apartments on that floor having to be lighted from the roof. As far, therefore, as the exterior of the building was concerned, we had a blank space of dead wall of formidable dimensions presented to us. It would be idle and uninteresting to recapitulate now the various methods we successively essayed for dealing with this portion of the façades. It is sufficient to say that we finally resolved on the treatment shown on the design now exhibited; and that our consulting referee — Mr. Beresford Hope — (who kindly undertook that office) approved of the exterior without qualification. What we propose is, to introduce into the blank space of this first-floor wall a series of terra-cotta panels representing the twelve months of the year by half-length female figures all variously designed and modelled in relief. These will be contained in a moulded framework of architectural character, and surmounted by a triangular pediment, the space inclosed by which will contain the sign of the zodiac corresponding to each month, and will be surrounded by brilliant-coloured mosaic.

The whole of this part of the design will be executed in red terra-cotta, of a colour and texture which will show out against the red-coloured brickwork with which the exterior of the building is to be faced.

A cornice in buff-coloured terra-cotta will surmount the story in which these panels are placed, and will be crowned by a rich ornamental cresting in the same coloured material, the roof above being coloured with a deep rusty green-coloured tile, such as we have ascertained can be secured in the immediate neighbourhood of the building.

Between the two stories a coloured frieze is to be introduced, 2 ft. 6 in. in depth, divided into eight compartments, which will represent so many of the industrial processes of the modern manufacture of pottery. It was originally intended by us that these subjects should be modelled and coloured in the manner of Della Robbia; but, as the expense of producing in this case would form a very serious item, and make a large inroad on the whole sum allotted to us for our design, we were very reluctantly compelled to abandon the idea of carrying out this feature in relief, and resort to painting the same subjects on the flat. It would be a matter of congratulation to us if we could hope that the introduction of the Della Robbia ware would never be practicable at some subsequent time before the work is actually undertaken. When we consider, however, the secondary object for which the ceramic design is conceived, there is none argument which should probably reconcile us to these subjects being painted on the flat as compared with the modelled treatment. If the Wedgwood building is to serve as a pattern-card, so to speak, of the uses to which modern pottery can be put in architecture, and of the market prices at which it can be produced, it is no doubt desirable that all the ceramic work should be of a kind and be introduced in such a manner as will best answer to the modern notions of economy in building. In regard to this particular feature of our design, such a result will no doubt be best obtained by having this frieze of subjects manufactured in numbers of flat pieces, as tiles, rather than in large modelled and moulded slabs, which would necessarily be much more costly in the process of making and in the risk of firing.

The windows of the ground-floor are proposed to be decorated with buff-coloured terra-cotta, in various modelled designs, somewhat after the type of the windows in the great court of the hospital at Milan. The space contained within the arched window-head will be filled with red Mansfield stone, to serve as a framework or back-ground for richly-coloured portraits of the most celebrated potters of ancient and modern times. [The chairman intimated that this was a mistake, as it was proposed to introduce Brindley and other of Wedgwood's contemporaries, who were not potters at all.] These portraits will be painted in Majolica colours on large circular plaques, and the remainder of the space, or spandrel outside of them, will be in enamel mosaic.

The porch, or front entrance to the building, is designed to form a central object on the ground-floor. Varieties of ceramic material are employed in its principal parts. The shafts on each side of the door, which carry the archway over the entrance, will be fluted in buff terra-cotta, and the flutes filled in with rich mosaics. In the face of the porch, and over the archway, three small panels, in Wedgwood Jasper-ware, are introduced, and are surrounded by an enamel mosaic ground. The small panels will probably contain some heraldic subjects connected with the Wedgwood family and the town of Burslem.

In the more architectural features of our design, moulded and ornamental brickwork will be used, and the entire façade of the building, both in its constructive and decorative parts, will thus be almost entirely composed of ceramic material."

THE WINDOWS OF GLASGOW CATHEDRAL.

An enterprise of which we have taken notice at various times is now completed. On the 3rd of this month the last window of those under the charge of the committee was placed in its destined position.

The first window erected was formally inaugurated on the 19th of November, 1859: it was the great west window of the church, the artist being Mauritz Von Schwinde, and the donors Messrs. Baird. The last and forty-sixth window of the series now completed is a triplet, the subjects being from the life of Saul, king of Israel; the artist Strahüber. The donor is Sir Andrew Orr, chairman of the committee.

The first painted window erected in Glasgow Cathedral arrived from Dresden in April, 1857, and was placed in the crypt: since that time, seven years and five months ago, eighty-one windows have been erected in various parts of this cathedral, viz., forty-six in the nave, choir, and lady chapel, under the direction of a committee of donors, upon a plan of Scripture illustration agreed upon, and a scheme of harmonious design and colour arranged for the entire series, all from Munich; four in the chapter-house, from London; fifteen in the great crypt,—that under the choir,—being two from London, two from Edinburgh, three from Milan, four from Dresden, three from Brussels, and one from Munich. In Blackadder's crypt, one from Brussels, three from London. In Lander's crypt, twelve from London. Ten windows are still in the course of execution, and two others are allocated.

This seems pretty well in a country where, only a few years ago, ecclesiastical or church decoration was not merely unthought of, but was disliked.

On the 23rd of February, 1856, a letter (from Mr. Heath Wilson) to the Lord Provost of Glasgow was published, which contained the following proposals:—

"I might quote other examples from the great periods of art, as well as from modern works, of adherence to a general plan in the decoration of ecclesiastical and other public edifices: it is obviously desirable that a similar plan should be adopted in our cathedral. The number of windows is so great that a magnificent series, commencing with subjects taken from Genesis, and ending with the Ascension, might be represented in succession."

In the same letter the importance of making these windows *works of fine art* was urged. By the harmonious action of the donors these ideas have been realized. The windows contain Bible subjects chronologically arranged, from the expulsion of our first parents from Paradise, in the first window, to the resurrection of our Lord, in the last. They are certainly works of art—some very poor, but not a few of them of very fine design, however opinions may differ as to the *principles* upon which they have been designed and executed.

A SYSTEM OF HANDRAILING.*

The first person who printed any directions concerning the mode of forming a wreath rail, was Mr. Francis Price, surveyor to the cathedral church of Salisbury. In the first half of the last century he published a work entitled, "The British Carpenter," in which the wreath rail was mentioned. This work was dedicated to the Earl of Hertford, and the titlepage bore the following certificate:—"Having perused this treatise of carpentry, compiled by Mr. Francis Price, we think it a very useful and instructive piece, and as such recommend it to every one concerned in works of that kind.—N. Hawksmoor, John James, James Gibbs." Notwithstanding the approval of these celebrities, Mr. Price's work was superseded in the public esteem by that of Mr. Peter Nicholson, who, in "The Carpenter's New Guide," laid down a plan by which wreathed handrails round circular and elliptic well-holes could be squared upon geometrical principles. Hitherto the method of forming a rail was that of tracing it like an angle bracket, from the rise and tread of as many steps as the rail was supposed to occupy in winders, and making the face mould of a parallel breadth, after obtaining the middle of the concave side; and this was always found to give a false result according as the difference in the circumference of the arc at the plan was greater than its chord. In 1822, Mr. Nicholson, with additional experience and research, condensed the whole art of handrailing into the necessity of finding the section of a cylinder to pass through three given points on its surface. With much elaborate labour he described the various processes required in the projection and construction of handrails according to his views; but to these we need not refer, as, in turn, Mr. Nicholson has been superseded by a new teacher. Mr. Joshua Jeays, in applying the rules laid down by this writer to practice, found the face-moulds given by them incorrect, the lines given as the butt-joint lines of the face-moulds being entirely out of their proper place. This led him to consider the subject; and having arrived at a new method, he communicated it to the Society of Arts, and afterwards laid it before the public.

Mr. Jeays urges that the construction of the handrail upon the principles of the orthogonal system is more economical than those previously practised; and that the face-mould is more easily applied to the plank by this method than by any other. He contends that it is also a more simple mode, and mentions as an example of this fact that the problem for determining the direction of the ordinates in the construction of the face-moulds is solved with four lines, which number is less than one-third of that employed by Nicholson for the same purpose. The construction of the butt-joint lines of the handrail upon strict geometrical principles, and the determination of the scroll from the logarithmical spiral, are among the additional new details in the volume now under notice, for which the practical man will thank Mr. Jeays.

Stairs are an undeniable growth of civilization. Contrasting the high houses of Belgravia and Paris, or the tall gable-ended homes of the honest burghers of the Middle Ages, with the stairless huts of primitive races, or the one-storied cottages of the agricultural districts, we might infer that, the more stairs, the higher the culture of those for whom the houses containing them were built. But we are so used to these accommodations that we scarcely heed them. Of the thousands of persons using them a score of times a day, there is but a small proportion that give a thought to the principle upon which they are formed, or are even aware that the construction of a staircase is a geometrical question. But to this small proportion the art of forming a staircase, with its handrail, is an affair of great moment and interest. The smartest joiner considers the projection and formation of a handrail the test of his capacities; and the town or country joiner completing his apprenticeship reserves the mastering of the difficulties of this art as the finishing strokes of his proficiency. There are, probably, few experienced joiners but can call to mind the evenings they spent, after their day's work was over, in pondering over the various problems required to be worked out before they became adepts.

The first process in the construction of a stair-

* "The Orthogonal System of Handrailing, with Practical Illustrations of the Construction of Stairs." By Joshua Jeays, author of "The Geometrical Construction of a Hip-roof." Second edition. London: Simpkin, Marshall, & Co. 1864.

case is to determine the proportion of the steps, for these vary in breadth from 8 in. to 16 in., and in height from 4 in. to 8 in. or 9 in., and there is a limit to the variations in these proportions, which cannot be exceeded without an unsatisfactory result. Mr. Jeays does not lay claim to novelty in his general theorem for determining the height or breadth of a step. "Let R represent the riser, and T the tread of a step, the proportions of which have been determined, and r and t the riser and tread of a required step. By having the two values R and T, we are enabled to find a fourth, proportional to another given value, r or t. That is, if we have the height, r, of the riser given, we are enabled to find the breadth, t, of the tread; or if we have the breadth, t, of the tread given, we are enabled to find the height, r, of the riser, by the following proportions:—

$$r : \mathrm{R} :: \mathrm{T} : t;$$
$$t : \mathrm{T} :: \mathrm{R} : r.$$

The value of the fourth or last quantity is found by multiplying the second and third quantities together, and dividing their product by the first, as expressed in the following formulæ:—

$$\frac{\mathrm{R\,T}}{r} \ldots (1) \text{ or } \frac{\mathrm{T\,R}}{t} \ldots (2),$$

accordingly as the riser or tread of the required step is given." The next process is that of dividing the story-rod. Then follows the planning. For the simple dog-legged stairs the rectangular parallelogram is the form generally chosen; but departures from this kind of stair call for especial plans. In olden times the turret stair or steps winding round a newel was the general form, as may be perceived in the various remains of the architecture of the Middle Ages. It was not until the castellated residences of the nobles of the land were superseded by the mansions built in Tudor times, that the staircase began to be treated as a consequential feature in dwelling-houses. At this date the steps were made parallel with one another: the flights were made wider: landings or resting-places were used: the walls were panelled; and the parapets formed of carved balusters or open fretwork. This new fashion was eventually carried to extremes, and staircases may be seen in some houses of a spaciousness not warranted by the size and number of the rooms. The circular well-staircase was a later fashion, and the oval well a variety of the same form. A staircase that is very effective and simple, consisting of a wide flight of steps, with two narrower flights branching off right and left from the landing-place, is a still greater favourite. All these varieties call for the handrail; and, as modernised, for the wreath.

Mr. Jeays commences his instructions concerning the formation of the wreath by the consideration of problems necessary to complete the theory of the orthogonal system. After explaining his method of projecting a simple curve upon an oblique plane, he proceeds to carry out the same principles in the construction of the common face-mould, and shows how the plan of the butt-joint line may be found. Directions concerning the best modes of squaring the wreath, of constructing the falling mould, and the scroll, follow. After directing the student's attention to details upon the construction of the moulds of a wreath for a quarter-space, and for a half space, and for a wreath over winders and other knotty points, Mr. Jeays proceeds to consider the application of the common face-mould to the plank, and to the orthogonal solid. The art of joining the wreath upon the bench is another difficult process, simplified by Mr. Jeays; and he also goes into the question of veneered handrails. The core of the wreath got out by the orthogonal system, the veneer is cut into shreds about 3-16ths of an inch broad, with a cutting gauge, and glued, five or six at a time, upon it. Steam should be brought to play upon them by a nozzle attached to a pipe, with a universal joint. Altogether the treatise is as comprehensive as the joiner could desire, as far as directions for the execution of work are concerned. If the various descriptions of staircases had been pointed out little more could have been desired.

New Park at Llanelly.—The opening of a new park has been celebrated at Llanelly by a public demonstration, a procession forming in front of the town-hall. The occasion was also made available for laying the foundation-stone of a new market, about 3 acres in extent, on Col. Stepney's park.

THE FRESCOES IN THE HOUSES OF PARLIAMENT.

At the recent meeting of the British Association for Science, Mr. W. Poole King, of Bristol, read a paper in the chemical section, on "The premature Decay of the Frescoes in the Houses of Parliament: its Cause and Remedy." He said: "Having lived for many years upon the Durdham Down limestone, and for a long course of time made observations on the walls built with mortar from this stone, which I understand has been brought from Bristol, and used for the plaster on which the national frescoes have been painted by special recommendation from authority, and having frequently examined those walls, both in and out of doors, I immediately recognised, from the description given by Mr. B. Atkinson, in a paper published in the journal of the Society of Arts, that exactly similar effects were taking place on the walls of the Houses of Parliament to those which I had been accustomed to see in constant operation. All the beds of Durdham Down limestone are of marine origin, being full of marine shells; and, although, in the long lapse of ages since they were deposited, the marine salt with which the stone must have been saturated has, for the most part, been washed out, yet still a trace of it remains insensible to an ordinary analysis. It is the general practice to burn this stone into lime with braize, (or cinder taken from the scavenger's yard,) and this braize always contains sulphur. In this chemical section, I need hardly say that in thus burning the minute quantity of marine salt in the stone is converted, for the most part, into sulphate of soda, or the salt well known in commerce as "Glauber salt." On most of the walls that grow cold in winter, I have found needle-form crystals, varying from a bloom 1-100th of an inch to needles of an inch in length, and in some instances in damp old walls, such as the cloister walls of a cathedral, the crystals stand out to the length of 1½ inch. At first I examined these crystals chemically. They were generally composed of sulphate of soda, in rare instances found mixed with nitrate of potash, and sometimes with small quantities of muriate of lime and magnesia. I soon became familiar with these bunches of needle-form crystals, and from their taste and general appearance, could not mistake them. When the weather becomes dry, all these bunches of crystal efflorescence are converted into a loose white powder, much of which drops from the wall, carrying with it shales of plaster, or flakes of paint, or films of whatever material the surface of the wall is covered with. Moisture will condense on the wall, if allowed to grow cold, in damp weather: the white powder is then dissolved, and the liquor, a solution of sulphate of soda, is absorbed by the mortar or plaster. Architects are in the habit of proving the value of the various kinds of stone presented for their use, for the endurance of frost, by a saturated solution of sulphate of soda, similar to this liquor, which, on crystallising, imitates the heaving and splitting action of ice forming from water. Accordingly, this liquor is no sooner absorbed as the wall dries, than it aggregates into ice-like crystals, and the plaster is disintegrated and heaved by the dynamical force developed in their formation. The plaster having sustained this injury, the salt transforms itself, and shoots out into bunches of needle-formed crystals, only to fall again into the terrible white powder, as the air becomes warm and dry. Thus a constant succession goes on of solution and desiccation, with the changes of the weather and temperature; and if the wall be permitted to cool with the frost, the ruin of the plaster is insured. Sulphate of soda exists, not only in Durdham Down limestone, but unfortunately also in much abundance in all the lias mortars, in London clays, and in many other stones. In fact, I doubt if any London wall is entirely free from its presence. We may, therefore, observe this kind of action of destruction going on more or less almost everywhere. A marked instance of its injurious effect can be seen in the Crystal Palace, where not only the surface of the richly-decorated walls is attacked, but also the plaster-cast statuary suffers, and requires constant renovation. In Rome and Florence, indeed, many frescoes have remained entire, with their colours smooth and in good order, for hundreds of years; but then these frescoes are on plaster made from travertino,—a limestone of fresh-water formation, free from salt, and the lime has been burnt with wood charcoal, in which there is no sulphur. In a late view which I had of the admirable fresco which Mr. Herbert has just finished, I find that the robing-room in the House of Lords was kept with a wet floor. If this apartment be ever allowed to grow cold, can we doubt that the fate of this glorious work of art is sealed? Damp will condense in drops on its surface, and be absorbed. These drops will dissolve whatever trace of sulphate of soda exists in the plaster, or, perhaps, in the mortar of the wall. The salt will aggregate together (probably by the force of dialysis), then form ice-like crystals, to heave the plaster, and show itself in a bloom on the surface of the fresco, and then desiccate into a dry powder, to be re-dissolved by the first moisture which comes over it, and then be re-absorbed again, till at last it aggregate into blotches, and the destruction be complete. To preserve this fresco, I should recommend that the robing-room be kept always warm, and as dry as possible, so that the sulphate of soda may not pass into solution and aggregation; and surely such a work of art, of which the nation is so justly proud, is worth the cost of any expense incurred in its preservation. The "liquid glass process," I understand, has been tried to secure the preservation of Mr. Herbert's fresco; but I doubt its power to prevent the plaster absorbing any drops of moisture which may come on its surface. Indeed, if there be any soda in the preparation of liquid glass, it may accelerate the work of destruction; for carbonate of soda is almost as efflorescent a salt as sulphate of soda, into which, however, the former is often converted by the sulphurous acid gas seldom absent from London air. I conclude that fresco-painting on fresh-water limestone walls, kept constantly warm and dry, will have the best chance of endurance for ages yet to come, for the delight of our remote successors."

SOCIAL SCIENCE IN YORK.

One of the most important papers brought before the Social Science Association at the York Congress was the address of the president of the fourth department (Mr. Edwin Chadwick, C.B.) on social questions generally. It was cheering and encouraging, as well as instructive, and might be usefully circulated in a cheap form. In the course of an account of our gigantic system of cotton manufacture, he said, as illustrative of the progress of this manufacturing system, and with it the progressive reduction of manufacturers' profits, on the piece, he had been told that there were persons recently living who saw a stockingless boy carrying milk in the town of Bury—saw that boy become a cotton printer by hand—then a great manufacturer by machinery—then a member of Parliament, and a baronet with a princely fortune—the father of a Prime Minister, and the founder of a house of statesmen. On a late visit to Manchester he was shown some cotton cloths, printed with dyes brought from India, of a pattern and sort printed by the first Sir Robert Peel, that were to be sent out and sold in India—cloth, printwork, and all—at about half the price which Peel had charged for printing alone. The progress of our cotton production may be represented by the fact that the cost of the pound of No. 40 yarn cotton included was, in 1812, 2s. 6d.; in 1830, 1s. 2½d.; and in 1858, 11d. Great manufacturing improvement, he said, has been due mainly to successive periods of manufacturing distress. It was an axiom of the late Mr. John Kennedy, father of the cotton manufacture, that no manufacturing improvements were ever made except on "threadbare profits." When the trade is doing well, the axiom is, that they cannot be better than well, and they remain as they are. But when the market is overstocked, or when from any other cause there is no sale at the then prices, the manufacturer, whose machinery is unemployed, and large capital wasting, is driven to his wit's end to exercise invention, and listens greedily to any by which production may be cheapened, prices lowered, and consumption stimulated. Stocks of goods being unsold and kept in hand, the manufacturer does not like to go about with "sacrifices," or throw them upon the depressed market at home. He has a young fellow, a son, or some one else whom he trusts, and he sends him with a shipload of goods on a venture like a travelling packman—on a venture to most remote parts of the world, to get any produce in return for them—ivory, skins, anything. The purchaser, who has got these adornments at low prices, has a strong motive to get them on the backs of the natives, and once on them, there is admiration and a permanent de

and for them, as there is now, not only in the mote parts of India, but in China, Egypt, Asia inor, Greece, Turkey, Persia, Mexico, and the razils. By such successive pressures of dis-ess, the production has been raised in 1860 to 5 millions, or six millions more than the gross venue of the United Kingdom, of which the eclared value of the exports was 52 millions. he wholesale dealers put 10 per cent. generally n the price of the manufactured article, and the tail dealers generally add to that 20 or 25 per ent., or, on the whole, some seven millions to he 24 millions paid for the cotton produce onsumed at home.

At the close of his address, after describing he unsatisfactory and unwise conditions under hich the majority of workmen labour, Mr. hadwick thus suggestively perorated:—As it ould be with soldiers in a garrison, the aggre-ation of people in factories, without due pro-isions outside the factory, is productive of irre-ular and inferior service, and frequent unintel-gent action within the factory. As, however, anufactures on a larger scale have become more ettled and systematised, and the consumption f goods more regular, and as capital has accu-nulated, many better educated and more liberal apitalists, with leisure to look beyond the walls f their manufactories, have introduced various mprovements in the condition of their work-eople; some by providing better houses for hem, others by providing improved schools for heir children; and they have generally found hat the improved external conditions, by bring-ng and keeping a more respectable class of eople about them, have been attended by im-roved internal service in the manufactory. Sanitary science and economical science will now nable them to invite new comers by saying to hem, "If you join us, you may rely upon having ellow-workers of respectable conditions, and of being protected from the annoyance of associa-ion with habitual drunkards, or with persons of disreputable conduct; for we permit none such o remain with us. Our place of work is warmed nd ventilated on the best principle, and pro-ision is made for the personal cleanliness and omfort of our workpeople. You will have a convenient self-contained house for your wife and family, well drained and ventilated, and pro-vided with pure water, as also with warm water laid on from the condensing water of our works for baths and for washing, with a garden plot attached to it. Our workpeople have a co-opera-tive store of their own, in which you may obtain wholesome food at wholesale prices, by which you may save 20 per cent. on your expenditure for food. Your children will have the advantage of a school under good teachers for physical as well as mental training on the half school-time prin-ciple. We have engaged, for the protection of the health and working strength of our people, the services of a medical officer of health, less to cure than to prevent disease by seeing to the re-moval of its causes. If you attend to his sug-gestions, for yourself and family, whilst using your working and living rooms, you may reduce your sickness and insurance charges more than one-half, and extend the period of your working ability more than ten years beyond the periods obtained in other places. This will enable you, under Mr. Gladstone's Annuity Act, by increased savings, to obtain a deferred annuity that will give you easy and respectable independence when you are past work. In the ordinary con-ditions elsewhere, your doom, a premature death, after a wretched life, is certain. In the common conditions, in ill-drained, ill-conditioned, cess-pool-tainted houses, without proper supplies of water, for which you will have to pay higher rents in low neighbourhoods, half your children will be in their graves soon after their fifth year, as you may see by the registrar's returns all workmen's children are in Manchester, in Glas-gow, and elsewhere. But here your wife may rear them all, and educate and train them all well, and you may enjoy with her and them the comforts of a cheerful home, to which com-forts each child as it grows up may, by duly moderated and salutary labour, contribute." If the million and a half of money lent by Parlia-ment for the employment of the unemployed cotton operatives should be wisely expended in putting the habitations of the workers in a pro-per sanitary condition; and if the experience of the results of proper works should lead to their general application to all places in the manufac-turing districts, where such works are needed; if the habitations be put in a condition as homes befitting a better trained and educated popu-lation; and if the better training of the in-comers be provided by the due application of half-time education; then this late and large dis-tress will, like others, be attended by adequate compensation. If the principles of economical and social science which I have indicated in their relation with the means of intellectual, moral, and physical improvement, be duly re-garded and applied, the conditions of the manu-facturing population, instead of being deplorable, will be brought up to advanced moral and social and intellectual conditions, commensurate with the increased and increasing wages derivable from the extraordinary improvements in the mechanical arts of which they are the ministers and the servants.

THE METROPOLITAN BOARD OF WORKS AND THEIR CONTRACTS.

We have at various times received a number of letters respecting the acceptance of Mr. Furness's tender for the first section of the Embankment instead of that of Mr. Ridley; the asserted connexion between Mr. Furness and the engineer of the Board; and the more recent use by Mr. Furness of dry rubbish from land, for permission to shoot which a contractor pays him, instead of Thames gravel and sand, as stipulated, for which he would have to pay,—a change calculated to put into his pocket, it is asserted, about 80,000*l*. The sum and substance of the majority of these communications was an attack on the engineer as the cause of Mr. Furness having the contract instead of Mr. Ridley; and the Board having distinctly stated that it was not on account of anything said by the engineer that Mr. Ridley's tender was not accepted, we have persistently refused insertion to them, and have been duly abused in conse-quence. A fresh correspondent, however, now writes more irately than the others concerning the formation of the Embankment: out of doors a suspicious feeling exists; and members of the late Parliamentary committee on sewage are making publicly such injurious assertions with reference to the contracts, that we are disposed to think the Board of Works would do well by putting forth at once a clear and precise state-ment, setting themselves and their engineer right with the public, as doubtless they could do.

On one point let us add a sentence. If, as the engineer considers, the rubbish and earth obtainable from land, not merely without cost, but at a money gain, is equally good for the formation of the embankment, there can be no occasion to pay for Thames ballast. There is, of course, a clause in the contract which would admit of the substitution, and save the money to the ratepayers.

METROPOLITAN BOARD OF WORKS.

At the last weekly meeting of the Board, Mr. Miller, M.P., referring to the correspondence which had taken place about the filling in of the Thames Embankment, said it appeared from that correspondence that the contractors had engaged to pay a certain price for dredged material to fill in with, whereas they had been paid money to allow of brick ballast being cast on the Embank-ment; and he asked the engineer whether the Board had any claim upon the contractors for the difference in cost. He also wanted to know whether the contractors had the authority of the engineer to use the land ballast, and whether he approved that material. The engineer (Mr. Bazalgette) said the first question of the hon. member could only be answered according to the interpretation put on the language of the Act, and it would be satisfactory to him if the Board would consider what construction could be put upon it. He thought the contractors had been justified in using the land ballast as they had; otherwise the work would have been much de-layed, as dredged material could not at first be obtained in sufficient quantities. The land bal-last was excellent for the purpose for which it was used. None of that material, however, would now be used, unless that supplied by the Thames Conservators failed in quantity or quality. Mr. Newton was of opinion that, if no other material but that dredged from the Em-bankment were used, the consequence would be an inferior embankment, as that material had no "binding" quality in it, and was of a sloppy nature. It was agreed that the whole subject should be referred to the Thames Embankment Committee, to be considered and reported upon.

ARCHITECTURE IN PARIS SCHOOL OF ART.

The exhibition of the works of the pupils of the Paris School of Art competing for the grand prize of Rome has just taken place, with the remarkable exception of paintings. The omission of the last arose out of an accident, under the new system. The subject given to the architec-tural pupils was, "An Hospice on the Alps," and the results are a number of most elaborate drawings. M. Guadet obtained the prize, but no exhibition ever illustrated more fully the objec-tion made by M. Viollet-le-Duc and other re-formers to competitions in which the pupils are fixed to a given subject, and that subject a fantasy. The exhibition adds another blow to the existing mode of education which fixes all the conditions beforehand, and ties intuitive genius or talent hand and foot.

SCHOOLS OF ART: THE SOCIETY OF WOOD CARVERS.

We are glad to observe in the last report of the Society of Wood Carvers a considerable im-provement in the position of the society. The present number of members is 164, twenty-two having been elected during the year. The report says,—

"The principal order for wood carving during the past year has been for the Baron Rothschild's mansion in Pic-cadilly, the carving for which has employed on an average twenty carvers for the last six months, and is still in pro-gress at the works of Messrs. Myers & Son, the work being designed and modelled by M. Joyau."

It refers with great satisfaction to the prizes given last year by the architectural Museum and those offered by the Society of Arts. The following passage calls for comment:—

"The members of the School of Art, attached to the Society of Wood Carvers, do not show any increase in numbers during the past year, which is traced to many unavoidable causes. Mr. Vaughan, to whom the thanks of all members are due for the warm interest he has taken in the society's welfare, it will be remembered presented to the society the sum of 10*l*. 10*s*., that being half the amount of fees for twenty-eight members at the school of art for twelve months; but as the members attending did not reach half the number required, the society, according to previous arrangement, returned to Mr. Vaughan 5*l*. 5*s*., which sum it is that gentleman kindly presented to the funds of the society."

The fact that wood-carvers do not take ad-vantage of the Marylebone Art School, thus made cheaply accessible, is much to be regretted. Never more than a dozen went, and only half that number went regularly, though two of them took the highest honours. The chief reason assigned in the shops privately is the dislike of the men to mix with the juvenile students, with whom the schools abound, and whom, in the preliminary course of outline, the men generally find to be their equals. Some mode of obviating this objection might be hit on.

SCHOOLS OF ART.

The annual report of the Reading School says,—"The number of pupils who have attended the school during the year has been 24 in the morning class, and 40 in the even-ing; total, 64. The master has been aided in his work by one local scholar, partly paid by the Department. His duties are to assist the master in the evening classes, and to teach in schools for the poor, five of which he has at-tended in Reading, and one at Henley: the total number of children taught by him has been 661. The knowledge of drawing and geometry gained by the children in this way is very considerable, and cannot fail to be of the greatest advantage to them, particularly to those who may become carpenters, stonemasons, engineers, or, in fact, be engaged in any industrial occupation, as it will not only enable them to make drawings themselves, but likewise to understand and work from a drawing or a plan when it is placed before them. At the examination held here and at Henley, on the 30th of last May, about 220 pupils were examined, of whom 163 were suc-cessful, some passing in two and three, and one in four and one in five subjects. 76 first grade prizes, and 11 second grade prizes have been awarded, and the remainder who were successful have received cards of merit. Contrary to most Government Schools of Art, we are not aided by subscriptions: beyond the aid received from the Department, the school is self-supporting; but the committee would suggest that a local effort be made to encourage the school, by offering prizes in the advanced stages of instruction."

THE COLOURED DECORATION OF CHURCHES.

THE SO-CALLED "CRYSTALLIZATION" OF WROUGHT-IRON.

Few questions have been more discussed than the "crystallization" of iron,—the term being used to express the deterioration of the metal under more or less accurately defined circumstances. The greater number of the talkers and writers on the subject seem to have forgotten that iron is a crystallized body from its very nature, so that the first bar which issued from Tubal Cain's forge was just as much crystallized as the iron being manufactured at this very moment. On the other hand, it is impossible to doubt that some change is produced in the internal structure of iron, as the same bar which, when new, is found to stand sudden pulls or deflections without rupture, often gives way—showing but little, if any, external change—under loads of much smaller amount. High degrees of heat, and certain magnetic and electric conditions, undoubtedly produce an internal effect on iron; but such conditions are rarely, if ever, present in ordinary practice, so that it cannot be to such causes we must ascribe the sudden ruptures of railway and carriage axles, of chain cables, and similar objects. In an interesting article in the last number of our contemporary, the *Engineer*, on "Internal Changes in Wrought-iron when Cold," it is observed that:—"To cite the different instances of sudden and apparently unaccountable fractures that have been brought forward, would be to give a catalogue of almost every important application of wrought-iron. The sudden breakages of railway axles and rails are the most public instances. Chains, in the form of chain cables for ships, and as used for cranes, inclines, mining shafts, forge slings, and even for suspension bridges and similar purposes, in which they have to undergo impulsive forces, are peculiarly subject to a deterioration, due to whatever cause, resulting in fracture. The gags of helve hammers, and the porter-bars temporarily welded under the hammer to the blooms, are also remarkably subject to sudden fracture. Amongst minor and domestic instances may be mentioned the wires of pianofortes, and the spindles of watch escapements, which often break in an unaccountable manner."

If it could be shown that iron becomes brittle by mechanical means, such as undue strains, this would account for its giving way suddenly under impulsive forces; and the fact of the suddenness of the fracture would, as has been shown by Mr. Kirkaldy and other experimenters, account, *per se*, for the crystalline fracture. This is clear on reflecting on, 1, the nature of an impulsive force, and on, 2, the nature of the latent resistance to any extraneous force of an object with a brittle structure. A bar of glass would break suddenly even under a gradual strain, and the same would take place with a piece of brittle iron.

Our contemporary goes on to observe that:—"As soon as a bar of iron is strained in excess of the elastic limit, a certain amount of elasticity (or the power of temporary elongation) and of ductility (or the power of permanently elongating), are taken out of it. The amount of latent work it contained at the beginning is therefore diminished. If the experiment be carried still further, and the bar be broken three or four times, the bar at the last time of breakage will be found not to elongate at all, but its powers of resistance to a statically applied load are wonderfully increased. Taking longitudinal tension, merely, into consideration—as it may be called the representative strain of the major portion of most other strains—we see that the bar is elongated in a longitudinal direction, and that this elongation is accompanied by a contraction of its cross-sectional area, which actually brings the particles nearer together, probably causing them to very closely interlace each other. The hardness, therefore, of our bar, and, consequently, its powers of resistance to a static load, are immensely increased, but all its elasticity and ductility have been taken out of it. We will now cite a number of experiments in support of our explanation,—experiments, however, which, from a more or less forgetfulness of mechanical principles, have, one and all, been actually cited in support of the supposition that a breaking load increases the 'strength' of the iron. In one sense the 'strength' was increased; but it was a hard or brittle strength: the tough strength, or the elasticity and ductility was, on the other hand, annihilated. The most remarkable and important of these experiments were those made some years ago at Woolwich, by Thomas Loyd, Esq., the Admiralty Inspector of Machinery, and they are given at length in Dr. Fairbairn's 'Useful Information for Engineers.' Out of a number of other results of the same kind, we will take the successive effects produced on a 1⅛ in. S. C. crown iron bar by four successive breakages. Twenty pieces of this iron, each 10 ft. long, were cut out of the middle of twenty rods of iron. These

WALL PAINTINGS, HEADINGTON CHURCH, OXFORDSHIRE.

[See p. 733, *ante*.

10-ft. lengths were cut into two parts of 5 ft. each. Taking that one marked F, we find that it broke with 32·25 tons, with a stretch of 10·5 in. in a total length of 54 in. At the second breakage it ruptured with 35·50 tons, with a stretch of 1·12 in. in 36 in. At the third breakage it ruptured under a load of 37·25 in., with a stretch of only 0·62 in. in a total length of 24 in.; and at the fourth and last breakage it gave way under a load of 38·40 tons, but with no stretch at all. By this time the section of the bar was reduced from 1·39 in. to 1·18 in. The constriction of area at the point of rupture is not noticed, but the rise of breaking strength, under a static load, *of from 32·25 tons per 1·37 in. section to 38·10 per 1·18 section, is remarkable.*"

Here is certainly a sufficiently simple explanation of the "crystallization," or, more properly speaking, the deterioration of wrought iron:—A brittleness gradually induced by a succession of strains in excess of the limits of elasticity, and rendering the material unable to withstand a sudden force, while this very brittleness would make the bar give way suddenly, and therefore with a crystalline fracture. Our contemporary states that it has derived the explanation from a paper on testing chain cables, read last May by Mr. Paget, C.E., before the Society of Arts, and portions of which we, at the time, gave in our own pages.

OUR DOMESTIC STREET ARCHITECTURE.

The architectural conundrum proposed by "Art-lover" in the *Builder* (p. 671, *ante*), is apt to raise many and various thoughts with regard to our domestic street architecture. It is a sad fact, that while stately piles are being reared for commercial purposes,—while banks, insurance offices, and mercantile buildings vie with each other in nobleness of form, and richness of decoration, our private houses,—our homes,—are mean and plain, and sometimes even have actual appearance of poverty. Long brick walls, black with dirt and smoke, with rows of oblong holes for windows (certainly improved of late by the introduction of plate-glass), doors conspicuous only from their plastered jambs, areas in front protected from the pavement by hideous iron railings,—these form the fronts of our streets, gloomy, uninviting, nay, even repulsive. There is one variety, but that is worse even. I allude to stuccodom; the head-quarters of which are near Regent's Park, and a large and, alas! rapidly increasing colony gathering round the British Museum. There is something, however, about these stuccoed houses, which would make them preferable to the others. They are more *truthful*. Yes, stucco as they are,—lying deformities as they are,—they are more truthful, in a certain sense, than the naked brick. They show more what their interiors are: they, in their falsehood, reflect the falsehood of the rooms behind them. The stuccoed front is in keeping with the oil-cloth pavement, with the grained doors, with the marbled walls, with the plastered ceilings which conceal the construction of the floors and of the roofs. A lie without, by expressing a lie within, becomes a truth, but a very sad and reproachful one.

There is no feeling, no spirit in our homes. Look at the residences of the rich and titled in the west of London: they display no art: all the attractions they have are their fittings and finishings, put up with due regard for modern comfort and civilization. Civilization! Come from the west to the heart of London, and see a wine-merchant's warehouse, — the venerable Crosby Hall. Cut in two by a thoroughfare, loaded internally by a gallery used some years ago by the musicians in concerts, its blazoned windows dilapidated, and its interior decorations irretrievably impaired, it stands there a noble and impressive object, a monument of the taste of our ancestors, and a reproach to ourselves. It silently tells us how, nearly four hundred years ago, when our country had not one-fourth of her present population, nor one-tenth part of her present wealth,—a simple knight reared for himself, his children, his children's children, for his descendants for centuries, this stately home. And the grey walls seem to frown, and then sneer, while they remind us that our proudest nobles live in constructions meant to last for a limited time, then to be rebuilt, and then built again, for the present generation only; those to come, uncared for.

But, it may be asked, Do you wish to make Crosby Hall our model for imitation? Not at all. Crosby Hall was built in the beginning of the sixteenth century. This is nearer the end than the beginning of the nineteenth. It is not the building that I wish imitated, but the spirit that produced it. The same feeling that moved the good old knight to erect his beautiful hall should move us also. *He* meant his hall to last: cannot we mean the same with ours? *His* hall was a part of his inner self: he felt for it, and with it: why cannot we do the same? Who is there among us now who loves his house in London? who, for its own sake, is loath to leave it? We love a place for its associations, for its remembrances; but that is all, and not always that. I myself, within the last four years, have "moved," and live now but a quarter of a mile from where I used. Do I ever go and bestow a fond look on the old house with stuccoed ground-floor and pseudo-Doric plaster portico? The imaginary question is ridiculous. Were it real, I should be inclined to think the questioner insane. But this should not be so. We talk and sing about hearth and home, and we have no homes! We are, in fact, nothing but wanderers,—if not always actually, at least careless whether we are or not.

It is this apathy which makes our domestic buildings so void of solidity. It has this effect, not only in London, but in country towns where better things might have been expected. I was lately in the ancient city of Chester, and there a great deal of building work was going on. Most of the new buildings are in the style of the old; but, instead of modern resource being employed to render them more substantial and lasting, their increase of height has no corresponding increase of thickness; and the pitiable cry of expense cannot be raised here, for I saw quantities of wood-carving exposed on the exteriors, much of it *ecclesiastical*.

I will now endeavour to show what I think our town homes should be. Be it far from me to attempt to lay down rules on the subject. "*Chacun à son goût*," say the French; and I have no doubt I shall be sadly at variance with many, though I sincerely hope the fundamental principles upon which I work will be approved.

My house will be of the same size as most in London; three windows in a row, and three stories above the ground-floor, with a basement and open area in front. I will begin from the bottom. Firstly, then, the basement. This I would have more massive than the upper part, projecting a few inches by weather-mouldings. The windows should be rather broad, on account of the scarcity of light; and as this breadth would take somewhat from the appearance of massiveness, they should be divided into two or three parts by mullions or shafts, though I think the former are preferable. These windows, owing to the thickness of the walls, would have a deep splay, which should be left plain or nearly so. In fact, the greatest simplicity should be observed in the basement, —first, because it is the lowest, and therefore should be the strongest; and, secondly, because it contains the menial offices. Under the doorstep of the house should be the door of the basement: this should be arched, with a segmental or with an obtusely pointed arch; the door itself should be plainly painted with some dark colour. Alongside of this door should be another large window, to light the passage along the basement. This should be similar to the others, only it might be made lighter, as it has comparatively but little weight upon it. The weather-mouldings, mentioned above, should be *an external indication of the joists of the ground-floor*. Some houses have a small outhouse in the area against the wall of the house: this might be roofed with slate, and, well treated, would be a very pleasing object.

Rising from the area, we come to the area-railings. These I would send to the right-about, without compromise, and substitute a low wall, about 3 ft. in height, and of considerable thickness, with boldly projecting mouldings, and a stout iron gate for the area-steps. This wall should run all round the three sides of the area: at the angles, and, particularly where it meets the doorstep, it should become more substantial, and might be somewhat ornamented.

The doorstep I should like, if possible, to be covered in entirely, making the space so gained a part of the entrance-hall. There should be a narrow window in the side overlooking the area. The doorway should occupy the entire breadth of the hall, and should be arched. The walls of this projecting hall should be as thick as possible, to give depth to the splays of the window, and to the jambs of the door. These jambs should have rich mouldings. I consider that, in domestic architecture, the door should be more ornamented than any other external feature, as being by far the most important. The roof of the porch should be flat, and should form a part of the balcony for the first-floor. Should it be impossible to build such a porch, the doorway should be the same, excepting that a window should fill up the arch. The door itself would be best of oak; and if not that, of deal, painted black or invisible green.

I have not said what material I would use. The bulk should be brick, of a light colour if possible, with stone dressings in the basement story only. The area wall would look very well if made of stone.

The windows of the ground-floor usually light the dining-room: they should be lofty and broad. As the principle of *substance* would extend through the whole of the building, these windows would have deep splays, though of course not so deep as those of the basement. These splays should be moulded; and, should ornament be desired at all, the windows would be by far the most fitting objects of it: they might be square-headed, containing an arch, the spandrels of which might be filled up with stone carving, either natural or heraldic. I decidedly object to ornamental details being executed in brick: mouldings only should be the ornament in brick.

Above the ground-floor windows would come the balcony, which I would support on stone brackets instead of the microscopic iron affairs now in use. The balcony should have a light iron rail running round it, and round the top of the porch, which would form a part of the balcony, as I have said above.

The windows of the one-pair floor light the drawing-room, and are generally the largest in the house. The splays of these windows especially should be made as deep as possible, taking care that, inside, they are not flush with the wall. I think that the most inveterate supporters of sash-windows will admit that in a drawing-room opening on to a balcony they are not indispensable. They are, in fact, almost as much doors as windows, and should therefore receive somewhat of the treatment of doors. Their large size makes it almost a labour to lift them high enough to enable any one to pass from the room to the balcony; while, arranged as double doors, nothing could be easier; and their width, divided into two, would be far too small to cause any inconvenience inside the room.

Next above these windows would be a bold string-course marking the next floor; and then would come another row of windows, on which no remark, however, need be made. Above these would be another string, and then the top story windows, which, however, do require a few words to be said about them.

In the first place, the form of the roof must be considered; and the roof must depend a great deal upon the staircase inside the building. I would build the staircase projecting from the back of the house, and thus leave the body of the building clear, and save all trouble about the roof; but as this would in a great many cases prove impracticable, owing to the limited area at the back, I should prefer to keep the staircase *entirely within* the house, lighting it either simply by a skylight, or, with greater pretension, by a lantern. This skylight or lantern would fill up the interior and one side of the area of the top of the building, leaving three sides to be roofed. I would do this with a roof of uniform high pitch, for the better protection from the weather; and I should make this roof useful, by making it a part of the rooms on the top story, the windows of which would thus be partly in the wall and partly in the roof, and which would give great scope for variety in the designing of the dormers. On each side of the house I would have a wall, sloping down in the front and back by means of sets-off; but always being higher than the roof,—being, in fact, for the purpose of protection from fire. Resting on this wall would be the chimneys, the tops of which should be diamond-shaped, which would have a very good effect.

I have thus given my idea of what our street architecture should be. I have purposely avoided inclining to any style, but have expressed myself in general terms. I have introduced no parts unnecessarily, but have done my best to produce the most with the least. No doubt, I have committed several grave errors, and I hope that these will be conscientiously shown up in some future number of the *Builder*. But whatever objections may be raised against my remedy (which only professes to be empirical), nobody

will deny that the disease exists, and ought to be cured in some way or other. It is quite sickening to walk through the streets of domestic London, and see what Canova called the long brick walls, with rows of slits in them. Reform we must have, and, to be thorough, it must be founded on some principle. I think that the great root of all evils now existing is the want of substance, and I have made substance the great principle in my plan for reformation. Several other remedies might be proposed, but as yet I think that more substantial construction is the best. Next to substance I have made bold horizontality the most important feature. When buildings rise 80 ft. in height, some horizontal lines are necessary to correct this. I have made my horizontal lines show the position of the floors, and thus rendered the exterior an index of the interior.

Ex Stirpe.

WASTE LANDS, SEWAGE, AND EMIGRATION.

During the last 100 years, agricultural skill and knowledge have advanced throughout Great Britain in a most remarkable manner. Wide spreading tracts of marsh and moor have been converted into profitable lands. In the southern parts of Scotland, even within the past quarter of a century, the changes have been great and the progress satisfactory, as in steam machinery for preparing food for cattle, sheep, &c., for thrashing corn, and for ploughing, or otherwise preparing the land.

We believe, however, that we are on the eve of the introduction of measures which will have a greater and more beneficial effect on agriculture than anything that has been done during the present century: we allude to the safe and cheap application of town sewage to the cultivation of the soil. The best mode of doing this on a large scale has not yet been ascertained; nor do we think that the effect upon the health of towns, of collecting immense masses of sewage in their vicinity has been clearly shown to be unobjectionable; but it is not likely that these problems will be solved except by actual experiment on a scale of sufficient extent. If these experiments are brought to a successful issue, however, this will be the means of putting into use vast quantities of land at present comparatively useless, and greatly increase the native production of human food:—it would also increase materially the demand for agricultural labour,—a point of much importance when the gigantic extent of the emigration going on from the British islands is considered. Month by month, great ships carry away multitudes, composed for the most part of the cream of our industrial population,—not to our own colonies alone, for great numbers seek their homes in the United States, which are in constant rivalry with, and often show anything but a friendly feeling to, the mother country.

In the six months ending last June, 123,000 persons, chiefly consisting of the working population, left these shores. In Ireland, instead of an increase of population, there has been, in thirty years, an actual decrease of nineteen per cent.; and even in the last ten years, a decrease of twelve per cent. In 1841, the population of Ireland was 8,175,124: in twenty years this number has declined to the extent of 2,401,587. This state of our population is a matter which demands grave thought. There are immense tracts of waste land at home which might, if proper facilities were held out, be improved so as to provide for a large amount of labour. In England alone, the waste land consists of nearly *seven million acres;* in Wales, 1,635,000; Scotland, 14,473,000; Ireland, 7,316,664; in the British Islands, 735,569; in all 30,871,563 acres of waste land. These figures show that within a comparatively limited space, and close to our own markets, we have lying absolutely waste, the enormous extent of nearly thirty-one millions of acres of land, which, as a contemporary observes, would give about an acre of ground to every one of our population, or five acres to every family. Are there no means as yet available by which this loss can be prevented? Might not tracts be selected by way of experiment, and offered, in allotments, on advantageous terms, to those of honest and industrious character, who would like to remain at home instead of crossing the seas? In the colonies small pieces of land are granted for trifling sums,—in some instances for nothing,—provided that within a certain time stipulated improvements have been made; and it does not seem unreasonable to suppose that if the needful measures were taken, many would devote their energies to the cultivation of land at home instead of going to some more distant clime.

No doubt, the labour would often be hard and the difficulties great; but let a man go where he may,—to the colonies or elsewhere,—to struggle for the means of independence and comfort, he cannot succeed unless he works long and steadily, and endures much privation. There are now throughout this country facilities of railways and other means of transit not in existence a short time ago, which would materially lessen the troubles which would necessarily have attended the carrying out of any scheme of this description formerly; and should the right mode of applying town sewage to the soil be at length ascertained, further cause for emigration on the part of our agricultural labourers might soon be in a great measure obviated.

FACILITIES FOR TOURISTS.

Wonderful as are the means at present in use for those who have time and disposition to see the beauties and curiosities of their own and foreign lands, these facilities are constantly increasing; and in the columns of the newspapers we see tempting advertisements of cheap excursion trains, which go in all directions.

From Blackfriars Bridge we may now daily go to the Crystal Palace, Ramsgate, Herne Bay, Broadstairs, Chatham, Stroud, Sheerness, &c.; or we may make a cheap excursion from the same place, or from the Victoria or London Bridge stations, to Calais and back; seeing, besides other matters by the way, the white cliffs and noble castle of Dover: this can be done for 7s. 6d. From the metropolitan station of the Brighton railway, the tourist may take cheap excursion tickets to Paris, which is reached in eleven hours and a half: by third-class the fare is 22s., or return ticket, available for a month, 36s. From the Euston-square station, cheap summer excursion trains run frequently. The fare from London to Windermere and back is 15s. On Sundays, trains start from the Charing Cross station by means of which persons are enabled to spend eight hours at Boulogne, and return on the same night,—fare there and back, 7s. 6d.; children under twelve years of age half price: so that the Londoner, at a very moderate cost and little loss of time, may speak of his visit to the Continent.

Cook's monthly tickets are available for express and ordinary trains and steamers to Paris and Switzerland: the cost of conveyance from London to Switzerland, and thence home, is, by first-class, 5*l.* 5s.; second-class, 4*l.* 14s. This gentleman has also planned excursions to some of the most interesting parts of Italy. He accompanies these excursions, and leads his companions to spots of the greatest interest, and to picture-galleries and libraries, thus saving trouble and delay; and also finds accommodation and local conveyance at moderate cost. All these facilities, it is true, deprive travelling of much of its romance; but for the man of business and for those whose summer holiday is limited to a short period, the plan has advantages.

The Great Western has excursion trains which start to the north, dropping passengers at Oxford and Banbury, Leamington, Warwick, Birmingham, Shrewsbury, Oswestry, Llangollen, Liverpool, Manchester, and many other places; and a similar arrangement is made respecting towns in the direction of Falmouth and Penzance; but the mere enumeration of the tempting routes which are made cheaply available by the railways would far exceed our present limits. All this contrasts in a remarkable way with the methods of travelling thirty or forty years ago. Nor do those increased facilities apply to rail alone; for the Londoner who may have an inclination for the sea may have that taste gratified, and in a short time may steam to St. Helena and back, and derive from the journey both health and pleasure. Or he may go direct from London to Norway, the fare for the chief cabin being 4*l.*, or 6*l.* return. Or he may go to Jersey, Guernsey, or St. Malo. Those who choose may take a steam yacht excursion round the sea coast every Sunday; the fare of the railway and yacht being 6s. 6d. It is a nice little voyage to Ipswich, Harwich, Dovercourt, Felixstowe, and Walton-on-the-Naze. Those with less spirit of adventure, or smaller means, may spend a pleasant day by making a trip from Hungerford or London Bridge to Sheerness, sailing round the Great Eastern and the ships of war in the Medway.

SURVEYORS' FEES UNDER THE BUILDING ACT.

Mr. Geo. Vulliamy, as superintending architect of the Metropolitan Board of Works, has made his eighth annual report on the monthly return of district surveyors.

A general abstract of the returns of fees for the year 1863 is appended to the report, along with a list showing the comparative revenues of the several districts into which the metropolis is divided.

The total of the gross fees for the year is 29,440*l.* 9s. 9d., received in respect of 17,954 works, of which upwards of two-thirds were done within the year.

The gross fees received in 27 districts vary from 54*l.* to 384*l.*—8 being under 200*l.* each, 6 under 300*l.*, and 13 under 400*l.* each. In 28 districts the incomes vary from 400*l.* to 1,545*l.*

The expenses of district offices are 5,793*l.* 19s. The fees remaining due for all arrears are 20,113*l.* 11s. 6d., but probably mostly of little value. The sums abated or lost are 1,178*l.* 4s. 7d.

Compared with the results of former years, the present abstract shows a large increase.

ARCHITECTURE IN UNIVERSITY COLLEGE, LONDON.

Professor Donaldson has issued his sessional circular, and takes the opportunity as usual to offer some remarks for the consideration of students themselves, and of those who take interest in architecture and construction,—the result of his experiences. He says truly,—"After all, the main question must be not how much is taught, although that is essentially important, but how much is learned by those who attend such courses. Discipline, kindness, earnestness, and confidence in the right on the part of the teacher will do much to create habits of attention, to arouse the faculties, and to create a deep interest in the topics treated upon. But on the part of the student it will be asked how much has he done with a little honest hard work to avail himself of the painstaking devotedness of the professor? How many evenings of the week does he devote to follow up the instruction given, and to perfect his notes of lectures and sketches of the illustrations? What books on the art has he read in furtherance thereof? and in what fruitful mode has he made himself master of the works that he may have consulted."

"There has been a specious popular outcry in regard to architecture fostered by public writers, and very much the result of ignorance, and which has induced an impatience of the control of rules in art, an ostentatious disregard of authority and a craving for novelty.

By some it is stated that a mistake lies in retaining the Greek and Roman as the standard, and that the youth had better devote himself to the Gothic style, as the more patriotic, Christian, and reasonable, and above all unfettered. I have more than once entered my protest against such narrowminded convictions; for I think that no architect should regard his art under an exclusive and *sectarian* point of view, but with a generous and universal spirit, rendering justice to *all* the varied phases which art has assumed in different countries, and at various epochs, and neglecting none."

NEW GAS-LIGHTING APPARATUS.

Mr. T. C. Eddy and Mr. M. Burdon, of Durham, have brought out an apparatus for lighting gas, intended to obviate the necessity of its being done by hand. It is called the "Electro-magnetic gas-lighting apparatus." The invention may be applied to any description of gas-lamp without their requiring alteration. The apparatus is about three times the size of a lady's thimble, and very much like an ordinary gas-burner. The principles upon which it is based are stated as follows:—An ordinary telegraph wire communicating with the negative pole of a galvanic battery is connected with the "Electro-Magnetic Burners" in succession, according to the number of lights required, and the extre-

mity of the wire communicates with the earth, or is conducted back to the battery, and attached to the positive pole, when the circuit is complete. Therefore, to light and extinguish the lights, it is only requisite to connect or disconnect one of the poles of the battery. Immediately the electric current enters the "Electro-Magnetic Burner," it passes through an insulated wire, which is lapped round a soft iron tube, which immediately becomes a powerful magnet, and attracts a piece of soft iron, which opens a kind of valve, and permits the gas to escape through the burner: at the same time the gas-valve is opened, the current passes through a piece of platinum wire close to the burner, which turns red hot and lights the gas. This effect is produced at every burner at the same instant.

WHO'S WHO?

The tremendous flood of photographic portraits which is now thrown upon the public is extraordinary, and leads to no little imposition and to some confusion in the great markets of the poorer classes of the metropolis. In the New-cut, Lambeth; the Brill, Somers Town; and in other busy places, the photographic effigies of the men of the day are sold in enormous numbers. Certain faces are so well marked and so familiar, that no mistake can be made; but there is many a man of mark whose visage is not generally known to the multitude; and in these cases great imposition and confusion take place; and portraits of learned professors, ministers of state, and even royal personages, are sold as that of the man of the moment, even though he be a murderer. Recently there has been a remarkable instance of this: the extraordinary excitement in connexion with the murder of Mr. Briggs has caused an immense demand for the photographic portraits of Müller, the suspected murderer; and on the Saturdays, in the markets mentioned, a familiar cry is,—"Portrait of Müller—only a penny!" "Here is the authentic portrait—only a halfpenny!" On examining the proffered sun pictures, we found amongst them the familiar features of Professor Owen, Sir Roderick Murchison, the Archbishop of Canterbury, the Crown Prince of Prussia, Prince Louis of Hesse, and many others. The morbid taste which has given to Müller a passing notoriety as great as that of famous warriors and statesmen will be the means of clearing out the otherwise surplus stock of many a photographer and seller of photographs; but persons of fame and respectability will at the same time have their portraits imposed upon the public as that of a man charged with a foul crime, and whose features do not belie the charge.

ST. JOHN'S, NEW BRUNSWICK.

Our correspondent writes from this colony, Thus far, this has been a very busy season in our line, perhaps more so than any for the last ten years: a large number of first-class buildings, both public and private, have been erected or are in course of erection, of which I shall only mention the recently-erected dwelling of Mr. George Carvill. It is of red brick, with grey freestone dressings, and is one of the largest dwellings in our city. A building in course of erection, of red freestone with grey dressings, much smaller in size (though not in pretensions to architectural beauty) than the former, is owned by one of our most extensive builders, Mr. E. J. Barteaux. Of the stores, that belonging to Mr. J. R. Ruel, and the larger one of Messrs. Daniel & Boyd, are the principal.

We are getting well along with the new German-street Baptist church, on the site of the old one, pulled down to make room for its more pretending successor. It is of the Gothic style, of the fourteenth century, with slight adaptations. It is small in size, being only 50 ft. by 75 ft., with tower and spire, 160 ft. to vane.

It is built of red stock brick, with grey freestone rather freely used. The spire will be of wood. Messrs. Hart & Sons, of your city, supply the ironwork, as we have no art-workmen in that department. The architect, Mr. John A. Munroe, hopes to make this the finest Protestant church in the city.

Our Government is making extensive railway improvements in the city, having just commenced a deep water terminus of great extent for a city like ours; but we are growing fast, and will need all by and by. The work is being executed from the surveys and under the superintendence of Mr. J. E. Boyd, chief engineer of railways in this province. There will be an exhibition of provincial productions opened at Fredericton, on the 4th of October, and it promises to be very successful.

Gold and marble have just been discovered in this province, the latter of very fine quality, of various colours, and in great quantities, it is said. The gold I have seen specimens of, but the marble I have not, so I cannot judge. We have freestone of the finest quality, and if we can get marble in any quantity we will soon have the latter in as extensive use as the former. There is a convention sitting at Halifax, trying to bring about a union of the British North American provinces; I wish it every success.

THE REMEDY FOR OVER-CROWDING.

Sir,—I have read with much pleasure and profit your able paper on over-crowding; and having also enjoyed the advantage of reading most of your previous works on these sanitary sins and sorrows of the City, I think, perhaps, you will allow me to make two brief observations on the subject.

1. In the first place, your observations and researches (which entirely coincide with those I have made in a more limited field) would seem to establish beyond a doubt the necessity of a thorough-going and systematic inspection of the poorer class of dwellings.

2. But as you do not indicate the method of inspection otherwise than as an extension of the Lodging-houses Act; and as the power of appointing inspectors under that Act rests with the "local authority;" I wish to state, in the second place, that I do not think such local authority either competent or proper to exercise this power; and that if you wish inspectors to be honest and impartial in the imperative discharge of their duties, you must place them beyond the reach of local influences altogether. Such was the view taken by Lord Derby's committee regarding the inspectors of nuisances under the Alkali Works Bill. I speak from my own experience.

An Inspector.

*** Our correspondent is right in his inference, but not wholly so in his premises. The execution of the Common Lodging-house Act within the metropolitan police district is vested in and well carried out by the Police Commissioners of the metropolis, to which body we would confide the appointment of inspectors of tenemented houses.

SLATING.

Having had twenty years' practical experience in the trade, and opportunity of observing provincial custom, I give you the result of such observation.

Slates are now without exception secured to battens (about $1\frac{3}{4}$ in. by $\frac{3}{4}$ in.) by two nails at a distance of $13\frac{1}{2}$ in. from the bottom (such distance being regulated according to the pitch of the roof), and not at the upper end. The exposure to wet being from the vertical joint, copper nails are confessedly preferable, although Vieille Montagne zinc, and sometimes malleable iron, are used when repairing old Westmorcland grey slating, which was secured by an oak peg in the centre of the upper end, which is generally round. I have observed a dry rot in the slate, rendering the peg useless. The peg is still used in Yorkshire, where roofs are covered with a thin stone, about 1 in. thick; but for Bangor, Port Madoc, Llangollen, and other blue slates, the custom of the trade is to nail the slate "the distance of the gauge, plus the lap." The superiority is evident from the position of the nails. By mechanical laws the power over bodies is increased by extension of leverage; and so, in this instance, instead of a lever of about 23 in., the power is reduced to about 13 in., with a counter force in the lath on which the head of the slate rests.

S. C.

THE SURVEYORSHIP OF WEYMOUTH.

Sir,—At the meeting for the election of a surveyor for the borough of Weymouth and Melcombe Regis, last Wednesday, a local man was appointed to the office. There were thirty-two applications; but the town council actually did not open one—an unheard-of proceeding, which ought to receive the greatest censure. They were bound in common justice to have perused them and selected the most fit and proper person for the office. I ask, why did they advertise for applications, when it was already known who would be appointed? It appears that most of the members of the council are led by one man, and instead of the welfare of the town being considered, it is party spirit.

Fairplay.

SUGGESTIONS FOR THE NEW STREET.

I beg you will, through the medium of your journal, call the attention of the authorities interested in carrying out the new street from Oxford-street, through the heart of St. Giles's to Charing-cross, the Act for which was obtained last session, to the rare opportunity it affords (by a competition among architects) for fully developing the renowned Chester-row feature, with all its glorious artistic effects of light and shade, allowing the highest graces of art being lavished on every variety of arcade, pediment, pillar, pilaster, frieze, and embellishment of the truest constructive architectural character; while no better opportunity could be desired for a display of the picturesque element, by varying the elevation of each block of houses, or of even nearly every house, as in the new Cockburn-street, Edinburgh.

In the new street all the grandest features of the Venetian palaces might be emulated, as well as the Rialto and other bridges in the streets to be spanned, for making the covered promenade continuous from end to end of the street, of course providing good access to all the intersecting thoroughfares.

When you reflect on what might be done with all the modern appliances of wrought and cast iron, terra-cotta, encaustic tiles, Lucca della Robbia and other ceramic ware, and with a right development of the wood-carver's art, you will see a result might be attained that would fairly enter into rivalry with the far-famed human and animal sculptured decorations of a structural character that still exist on the fifteenth and sixteenth century houses of Italy; whilst, for the most important edifices in the line, frescoes might be introduced, with the highest artistic effects, in the ceilings, pilasters, &c., of the lofty arcade.

I venture to say, if such a plan could be carried out, it would exercise the most powerful influence in promoting a love of the arts, and an improvement in the skill of the artisans, whilst adding to the value and business attractiveness of the street.

Vast improvement in stone carving has been brought about in a few years by its free introduction as a structural decoration on the fronts of our new hotels and warehouses, and an amazing increase in stained glass workers, caused chiefly through the press arousing the public mind to the elevating use made of those arts in the countries where the mind and manners of man have been developed in their grandest forms in past and present times. English oak or walnut wood sculpture and carvings might be made a much more important adjunct of decoration on the elevations of our new banks and other houses of business, and would give a characteristic charm of noble yet picturesque beauty no other material can produce.

With good designs from architects and sculptors, proper models to guide and assist the young students, and the aid of steam machinery, as well as an enlistment of the surplus male and female labour, the supply of carving at a reduced rate of cost, might be soon secured to meet any increase of the demand, the establishment of such an example as the new street would give rise to.

At all events, the publicity of the idea in your journal might lead to an elegant embodiment of it in a few drawings for the next architectural display at the Academy.

George Lock, Designer.

ASSESSMENT OF GAS COMPANIES.

At the Glasgow Appeal Court, the Glasgow Gas-light Company appealed against the valuation of the assessors. Mr. Donaldson stated that the company had been allowed all the deductions which they claimed, with the exception of the depreciation of meters. These deductions reduced the valuation by about 400*l*., leaving the estimated value within the Parliamentary boundary at 20,397*l*.

Mr. Allardice, who appeared for the Gas Company, said the ground on which he opposed the valuation was not upon the question regarding the meters, but upon the general principle upon which the valuation was made up. The assessors took as the basis of the valuation the revenue and expenditure of the company. The Gas Company was a company established by Act of Parliament for the manufacture and sale of gas, and was therefore just a manufactory, and should be dealt with in the same way as other manufactories, the profits realized from which were never gone into by the assessors. In support of his argument, Mr. Allardice referred to several cases disposed of under the Poor Law Act.

Mr. Donaldson maintained that the practice all over England was to take the revenue into account in estimating the value.

Mr. Govan said the Gas Company was a public company, authorised by Act of Parliament to levy rates, which a private company could not do.

The Court dismissed the appeal.

CHURCH-BUILDING NEWS.

heddleton (Staffordshire).—The parish church been restored. The pews have been swept y, the plaster ceilings pulled down, the roof ired, the floors relaid, the foundations under- ed, and the stone-work renewed where abso- ly necessary. The only external alteration, des the addition of the vestry, is the restoring he gabled roof to the north aisle and the pletion of the tracery of its east window, ch had been cut off when a flat roof was put

In the interior the change is great: the s have been replaced by oak benches, and chancel is separated from the nave by a high en, which now forms the principal feature of interior. It being doubtful whether there ever been a chancel arch, it was thought rable to mark the distinction of nave and ncel by a screen of this description. Four of windows of the chancel have been filled with s by Messrs. Morris & Marshall, of London. designs are taken from the fragments of inal glass which were still left in the win- s. All the old fragments have been worked in the new windows. The figures which py the windows are all said to have some nexion with the dedication of the church. y represent kings who have been sainted, or been connected with church history. In are Constantine and his mother, St. Helena; nother St. Charles and St. Louis; in the l, Ethelbert of Kent, and Peada of Mercia; in the fourth, Alfred the Great and St. Ed- l, the church's patron saint. These four lows are the gift of the Lady of the Manor. e windows consist in great part of grisaille s. In one of the windows of the north aisle ainted glass window has been placed by Nall, of Leek, as a memorial of his daughter, late Mrs. Edwin Heaton. The subjects are n from the 23rd Psalm and the parable of Good Shepherd. The organ, which is being by Mr. G. Walker, of London, is to stand at east end of the south aisle, where an old ace and piscina are visible. Mr. Thomas dle has placed in the tower a sixth bell, to memorate a deceased member of his family. old churchyard cross, part of the shaft of h alone remained, is to be completed and ed with a suitable cross. This is also the of Mr. Wardle, who is one of the church- ens. The church has been warmed by ens, of Leamington, on the Mitchell plan of oxes and flues below the tiling. The whole e restoration has been under the supervision r. G. G. Scott, jun., the son of the well- wn architect. Mr. Evans, of Ellaston, was ontractor; and Mr. J. Saville, the clerk of works. The total outlay, it is expected, will out 2,200*l.*

orcester.—In less than a month the work of ring the tower and the northern portion of cathedral will be commenced by Mr. Hughes, istol, whose contract has been accepted by Restoration Committee, the terms being r 10,000*l.* It has been estimated that the sum required for the completion of the rations and improvements will amount to 00*l.*, and of that sum 16,223*l.* have been ributed. —— At a vestry meeting of the h of St. Nicholas to acknowledge the gift 000*l.* from Mr. W. Perrins for increasing the wment of the church, a resolution was imously passed that this is a fitting time to ere and reseat the church.

derworth (near Rotherham).—Operations ow going on for the enlarging and beautify- f Kimberworth Church. It was built in but its want of architectural beauty has unted its becoming an object of interest. nterior of the church has presented as un- ing an appearance as the exterior. It is osed to build a square tower, some 70 ft. at the west end of the church. On the side of the tower will be an organ-loft, un the south side the entrance-porch. The gallery across the west end will be re- d, and all the extra space obtained will be wn into the body of the church. By this the church will be lengthened nearly one- h. The new sittings secured will be unap- riated, and it is hoped, eventually, all will ne free. It is estimated that, to carry out improvements, about 400*l.* will be required. is sum 50*l.* have been subscribed by the Earl dingham, and 50*l.* by the Earl Fitzwilliam. t. J. Bentley has given 25*l.*, and other sums romised. The church is built in the plain c style, and the architects (Messrs. Black- & Withers) will carry out the same style in the tower. Mr. Ripley, of Masborough, is the contractor.

Grantham.—A numerous and influential meeting of the gentry and tradesmen of Grantham and neighbourhood has been held in the Town-hall, Grantham, to concert measures for the restoration of the parish church. Earl Brownlow occupied the chair. Mr. Scott, he said, had thoroughly examined the fabric, and prepared a report. The alterations and restorations he recommends will cost about 14,000*l.* Mr. Scott had spoken of the spire of Grantham Church as only second to Salisbury Cathedral. To give effect to the resolutions passed at the meeting, Sir John Trollope proposed that a subscription for the restoration of Grantham Church be commenced forthwith. The subscription list now amounts to 6,000*l.* The stonework, according to Mr. Scott's report, is in good preservation, but requires careful reparation throughout. The internal surfaces require cleaning from whitewash. The south-eastern angle of the church must be underpinned, and otherwise strengthened, as it has given way considerably. The two porches require extensive repair and restoration. The general system of reparation spoken of as necessary to the stonework, must be applied, continues the report, to the tower and spire; and, while the scaffolding is up, it would be desirable to restore the upper portion of the spire to its original height, several feet of which have been lost through unskilful reparation. The foundations of the church should be examined throughout, repaired where they are found to require it, and protected from damp by concrete, a stone channel being formed all round, and the whole system of drainage rendered complete and effectual. No part of the roofs, excepting that of the nave proper, retains the original pitch. Every portion is, more or less, in a state of decay. Mr. Scott thinks that, in this case, it would be best to renew the whole of the roofs, restoring them to their proper pitch. The whole of the interior will require to be refitted.

Consett.—The foundation stone of a new church, according to the *Newcastle Courant*, has been laid at Consett, which, until a short time ago, was in the parish of Benfieldside. Consett having been made into a separate ecclesiastical district, a school-room, near the Consett Iron Works, was used temporarily as a church, until means could be obtained for erecting a church. A site was selected for the building west of the village, and there the first stone of the new edifice, which is to be called Christ Church, has been laid. The church will be built of stone, in the Early Norman style, from designs by Mr. Corey, architect, Carlisle, and will be quite devoid of ornamentation. It will consist of the nave, chancel, and north aisle, with a low tower at the west end, which it is intended shall be surmounted by a spire. North of the chancel will be an organ chamber and vestry. The nave will be so built that, should the congregation require it, a south aisle can be added, of the same form as that of the north aisle. The principal entrance is from the west end, beneath the tower, and it will be the most ornamental part of the building. The extreme length of the church will be 137 ft., the chancel being 26 ft. long; the width 54 ft.; and the height of the roof of the nave 35 ft. The tower will be about 40 ft. high, and the spire about 30 ft. more. The church will be fitted with open benches, to accommodate 520 adults and 100 children. The roof will be of open timber, and the aisle will be separated from the nave by six arches. The cost of the building will be 1,825*l.*, of which 600*l.* require yet to be raised. The contractor is Mr. Lowes, of Durham, builder.

DISSENTING CHURCH-BUILDING NEWS.

Plymouth.—The Sherwell Chapel, a large structure in Tavistock-road, Plymouth, for the increased accommodation of the Congregationalists, has been opened for divine service. A prominent feature of the structure is the tower, surmounted by a spire, being about 140 ft. from the ground to the top of the vane. The design is Gothic, with details of the Second Pointed period. The front of the chapel is parallel with Tavistock-road, and set back 10 ft. from the line of boundary. A flight of steps leads to the central front entrance, vestibule, and lobbies, communicating with the ground-floor seats, side entrances being provided to the galleries, that on the north side being under the tower. The centre front gable is flanked by enclosures to the gallery staircases. Over the south staircase there is an octagonal roof, corresponding in position with the tower on the opposite side. Above the central front doorways is a five-light window, with traceried head. The side windows are in two tiers; the lower range beneath, and the upper range above the side galleries; and all have geometrical tracery. Internally, two rows of iron columns, 6 in. in diameter, and coupled transversely, with 3-in. space between, and 13 ft. apart, divide the whole width of the chapel into the three compartments of the aisles. The capitals are surrounded with leafage. Above the columns are pointed and moulded arches, five in number, on each side and supporting the central or nave roof. The roof is constructed so as to show the inner ceiling, with sloping sides, divided into compartments by moulded timbers and hammer-beam trusses. The roofs over the aisles are similarly treated, the spaces between ceilings and roofs being made available for the purposes of ventilation. The side galleries are four seats deep, exclusive of passage next the walls, and the end gallery extends over the front vestibule, and contains a large number of sittings. At the western end is an apsidal recess, occupied by the organ, which is being built by Mr. H. Willis, of Regent's Park, the builder of the great Liverpool organ, and of those of Wells and Winchester, the latter being the Exhibition organ of 1851. It is a full church organ, containing three manuals, from double C to G. The organ front, which is of polished oak and carved, was manufactured by Messrs. Yabsley, of Plymouth. In front of the organ recess is a platform 18 ft. by 16 ft., with carvings and railings decorated with ironwork. The pulpit is in the Gothic style, and consists chiefly of pitched pine fir, varnished. The transepts have ceilings of semi-octagon shape, which abut against the nave arches, to prevent the acoustic defects generally accompanying transepts. Underneath the organ-recess is a chamber for Haden's warm air apparatus, and in the rear are vestries for minister and deacons, adjoining each other. Accommodation has been provided for about 1,200 persons, of which number about 700 are on the ground floor. Additional accommodation can be provided, if required, by enlarging the transepts. The dimensions of the chapel internally are 53 ft. wide, 94 ft. 6 in. long (exclusive of apsidal recess, which is 15 ft. additional), and 48 ft. from floor to apex of ceiling. The side walls are 30 ft. high from floor to plate, and the front gable is 75 ft. high from the ground surface to the top of finial. Portland stone has been used for all tracery and delicate dressings, and for the spire; and the walls are built of native stone and lias lime, faced with limestone of dark colour, ranged in courses and pointed with dark mortar. Light-coloured limestone has been used in bands and for all quoins; and the relieving arches over all doorways and windows are varied in voussoirs of purple slate and red limestone. The roofs are covered with Welsh slates in bands of red and blue. The building has been erected by Mr. John Finch, of Plymouth, under the superintendence of Messrs. Paull & Ayliffe, of Manchester, who were the architects, Mr. Mayjor, of Plymouth, being clerk of the works. The cost will be over 6,000*l.*

ROMAN CATHOLIC CHURCH BUILDING NEWS.

Hoxton. — The foundation-stone of a new Roman Catholic Church has been laid at Hoxton. The edifice is dedicated to St. Monica. In connexion with the site of the intended building we may mention that the house No. 12, Hoxton-square, now standing there, is at present occupied by the Augustinian Fathers. In the time of Charles II., it is said, this house was the resort of that monarch, and there are in relation to the old red brick building various tales of Nell Gwynne. In the course of the necessary excavations in the grounds attached to the house, traces were found of a subterranean passage—in some parts quite complete, with brick walls and arched roof—leading, it is imagined, to York House, a place not far distant at that period, and another of his Majesty's oft-frequented spots. This is the first Augustinian church in London since the time of Henry VIII. The new edifice is to be 124 ft. in length by 40 ft. in breadth. The plan is a parallelogram, and the building is divided into nave and aisles by pitch-pine columns, which support the main principals of the roof. The nave is separated from the chancel by an arch ornamented with marble shafts. The chancel is lighted by nine windows,—eight lateral lancets

and one rose window. Beneath the window the chancel opens upon the side chapels by an arcading of eight arches supported on small stone columns. The roof of the chancel will be waggon-headed, and divided into panels by wooden ribs. The roof of the nave is open, with ornamental metal work. The nave is entirely lighted from a clerestory worked in Bath stone. Behind the sanctuary is a sacristy 40 ft. long by 12 ft. in width. The height of the building is 51 ft., and it will cost, when completed, about 3,300*l.* Mr. Oxborn, of Clapton, is the contractor; and the architect is Mr. Welby Pugin.

Barnet.—A new Roman Catholic Church has been commenced at Barnet, the first stone being laid by Bishop Morris. The church is to be Gothic in character, and the architects are Messrs. Willson & Nicholl, of London. It will be about 50 ft. long by 32 ft. wide, and will accommodate about 200 persons.

STAINED GLASS.

Chichester Cathedral.—Almost all the lower windows of the building are already filled with painted glass. There are only four plain windows left in the nave aisles, and one of these is about to be filled with stained glass. It is to be a memorial window, like most of the others, the glass being manufactured by Messrs. Clayton & Bell, of London.

St. James's, Dover.—This church has received recently an addition to its numerous other embellishments in the shape of a stained glass window, which has been inserted in the west end of the church, immediately above the cross gallery. It has been placed there, we understand, at a cost of 400*l.*, and is intended by the building committee to serve as a memorial of Lady Morrison, who rendered valuable assistance to the funds for the erection of the building. The window consists of five principal lights, each containing two Scripture subjects taken from the Old Testament, and intended to illustrate the chequered experiences of the Israelites of old; while underneath are passages of Scripture showing their spiritual meaning. Surmounting these are seventeen lesser lights, two of which seem designed to represent the creation of our first parents; and lower down, over the centre of the larger compartments, appear the initials "I.H.S." The artists are Messrs. Heaton, Butler, & Bayne, of London.

Hereford Cathedral.—A window in memory of the late Archdeacon Freer, according to the local *Times*, has been erected in the north transept. The window has been designed and executed by Messrs. Hardman, of Birmingham. The cost is about 1,300*l.* The window is one of the largest of the Geometric period (temp. Edward I.) in this country, the glass being 48 ft. 6 in. in height, by 21 ft. 6 in. in breadth. The predominant colours are ruby and Canterbury blue (about five or six shades of each). Plain white glass has also been largely used in the upper part of the window. The details of the new glass are in accordance with the architecture of the north transept. The various medallions are filled in with a variety of figures representing Piety, Fortitude, Knowledge, Counsel, Wisdom, &c.; "St. Paul before Festus," "St. Peter and St. John confirming and enlarging the Church in Samaria," "St. Stephen distributing Alms," "St. Philip baptising 'a Man of Ethiopia,'" "Angels with spiritual Armour," "The Crucifixion of our Lord," "Our Lord sending forth his Apostles to establish the Church," "St. John the Baptist preaching in the Wilderness," "Martyrdom of St. Stephen," "St. Peter healing Æneas of the Palsy," "St. Paul shipwrecked," "St. Peter imprisoned by Herod," "Angels crowning the Just," &c., "The Heavenly Jerusalem," and other subjects.

Wellesbourne Church (*Warwickshire*). — A stained-glass memorial window has been fixed in the east end of this church, containing the following subjects, viz., the "Annunciation" and "Nativity," and in the centre opening, the "Crucifixion," under canopies; and on pedestals under the above the subjects of the "Baptism," "Christ before Pilate," and "Last Supper." On a brass plate at foot is an inscription to the memory of Cecil Henry Paulet, son of Lord Charles Paulet. The window was executed by Mr. W. Holland, of Warwick.

Whatfield Church, near Ipswich.—The west window of this church has been filled with stained glass, executed by Mr. W. Holland, of Warwick. It contains four subjects in side-lights, representing the Acts of Charity, under floriated canopies, and in the centre opening "Our Saviour healing the Sick," with angels on pedestal bearing a scroll, with the words "He healeth all thy diseases." In the tracery are figures of the four Evangelists, with their appropriate emblems, the Lamb, pelican, I.H.S., &c. Running across the bottom of the window is the inscription, "To the memory of Sir Robert Harland, bart., of Wherstead Park."

Halifax Church.—The pupils of the late Rev. John Henry Gooch, incumbent of Stainland, and head master of the Free Grammar School of Queen Elizabeth at Heath, have erected a painted window, in memory of their late master, in Halifax parish church. The window is Perpendicular in style, and formed of three openings and tracery. The subject, which is extended over the three lights, is taken from St. Luke iv. 32, "And they were astonished at his doctrine; for his word was with power." The whole is the work of Messrs. Edmundson, of Manchester.

St. Matthew's Church, Knott Mill, Manchester. The teachers and scholars connected with the schools attached to this church have subscribed to defray the cost of two painted windows which have been placed in the sides of the chancel. The style is Perpendicular, and each window is composed of three lights and tracery. In the centre opening of one window is a representation of the Saviour blessing little Children; and in the side-lights, life-sized figures of the Evangelists Matthew and Mark. The second window contains "Christ's Charge to Peter;" and in the sides, figures of St. Luke and St. John. These windows were executed by Messrs. Edmundson, of Manchester.

Peterborough Cathedral. — A stained glass window, the production of Messrs. Heaton, Butler, & Bayne, of London, has recently been placed in the north transept. The subject in the sinister light is "Christ's Agony in the Garden;" and in the dexter light, "Soldiers and Rabble, with Judas at their Head;" beneath, the "Disciples asleep;" and in the tracery, "Angels holding Emblems of our Lord's Passion." This window was erected by Mr. G. W. Johnson, of Peterborough, in memory of his mother, Margaret Johnson.

FROM SCOTLAND.

Glasgow.—The extensive ship-building firm, Messrs. Tod & M'Gregor, whose works occupy a site of 14 acres at the confluence of the Clyde and the Kelvin, have found it requisite still further to extend their accommodation (on a portion of their own land), by the formation of a new slip dock. The working plans were prepared in the spring of the present year, and the work let in May last; and it is now actively progressing towards completion. The slipway is 557 ft. in length, and will be capable of taking in a vessel of 800 tons. The foundation of the slipways is formed of four rows of piles, from the top of the slip down to the extreme end of it, and a portion of these piles will be driven and cut off under water. The upper portion of the ways is formed of timbers laid upon beams of whole logs set across the entire breadth of the slip over the bearing piles, the spaces under the ways between these cross bearers being filled with concrete made of gravel and hydraulic lime. Upon these ways four lines of massive cast-iron rails are laid. The lower part of the slip is formed of an immense raft or platform of timber 210 ft. in length, formed of sleepers of whole logs bound together with diagonals and runners, strongly bolted and trussed to this framing. Upon this a continuation of the ways and rails is formed. Wharfs of stone and timber are constructed on each side of the slip, from which the ships are set, steadied, and adjusted on the cradle. The hauling power consists of Miller's hydraulic purchase, which hauls up the cradle by direct action, without intervention of wheels or machinery. The pumps which work the purchase are driven by a steam-engine. The line of rail which is about to be formed through Partick in connexion with the Edinburgh and Glasgow Railway goes directly past the end of the slip, and a siding will be formed into the dockyard. The contract for the masonry, piling, &c., of this slip-dock were let to Mr. Hugh Kennedy: Messrs. A. More & Sons are constructing the hydraulic purchase; and the proprietors the steam-engine and cradle; the whole of the work being done from the plans and under the superintendence of Messrs. Bell & Miller, civil engineers.——The Maxwell Church, in Pollok-stree is now near completion: the site was given b Sir John Maxwell, of Pollok. The church wi hold about 900. The tower and spire, which al about finished, will be about 140 ft. in heigh The entire cost will be about 4,000*l.* Mr. O'Do noghue is the architect.

Partick (*near Glasgow*). — The spire of S Mary's Church is now completed. Its height about 130 ft., and it is surmounted by an orna mental finial and weathercock. Mr. Maxwe of Partick, was the contractor, and the architec was Mr. G. H. O'Donnoghue.

Arbroath.—The architect of the projecte public hall for Arbroath describes his design being in the Old Scotch style modernized. T site and locality suit this style of building, remarks, which is always greatly enhanced whe viewed in angle direction. A large gable, wit turrets and treble-light window, forms the prin cipal or leading features in the design: by the features the position of the hall is at on marked. A little decoration of an excessive simple kind has been shown on this gable. T height of the building to the eaves of roof about 40 ft., shop-floor 13 ft., and hall 26 ft.; th supper-room and museum together being equ to hall, or 13 ft. and 12 ft. respectively. T subjoined probable estimate of the cost in erec ing a building of this extent is given:—

Mason work	£1,600
Joiner work, including hall seats and open roof	1,500
Slater work	110
Plaster work	135
Plumber work	100
Iron work	150
Glazier work	240
Painter and stainer work	105
Total	£3,950

Perth.—The Commissioners of Police havi had their attention directed to the state of th drains, sinks, and cesspools, at Marshall-plac King-street, and King's-place, Perth, by th inspector of nuisances, the superintendent police has submitted a report thereon, whic shows a fearful state of things with regard drainage in one of the most respectable parts the town. He concludes his report as follows: "I am of opinion that before those residing this locality can expect or ever hope to be fr from fever and other diseases well known originate by the inhalation of poisonous gas generated in bad drains and foul cesspools, t whole cesspool system now existing in the d trict must be done away with;—that a ma drain of sufficient capacity to carry off and dra all water, nightsoil, and sewage, from t kitchens, should be laid down;—that in place the present square-built drains, through whi the sewage oozes and gets out, good fire-cl pipe drains should be put down, through whi the sewage cannot escape, but by which it wou be carried away from the houses without bei lodged about the grounds, and producing the smells which are so offensive, and those diseas which baffle the skill of our best physicians heal successfully." Mr. John Young, C.E., Pert has also submitted a report as to the best mea of draining the district in question. He es mates the cost of the drain at 1,248*l.*; avera cost to each proprietor, 18*l.*

THE POLYTECHNIC.

Very instructive as well as entertaining is t new lecture by Professor Pepper on the Ph nomena of Sound, wherein he brings together whole century of experiments illustrating vario branches of the subject. An arrangement sho ing on a screen the vibrations produced in ree when blown through is exceedingly interestin a complete circle revolving in various plan when sounded in unison; a jumble of for when discord is introduced; thus showing, as says, a certain plain gold ring to be literally t symbol of harmony. A speaking head is show the voice of a confederate being conveyed throu tubes; but we cannot say, with some of the da papers, that the mystery of the Anthropogloss now exhibiting in Piccadilly is thereby solv the latter having no pedestal or other screen a communicating pipe. The sounds in the lat case *may* be conveyed by a pipe or pipes, but so it must be done in a much more artificial a ingenious manner than that exhibited at the Po technic. There are many other entertainmer for the shilling at the Polytechnic, includi Paganini's Ghost, which, though no ghost all, includes a very quaint and curious perfor ance on the violin.

Books Received.

Archæological Collections. Published by Sussex Archæological Society. Vol. XVI. ton, Lewes. 1864.

Sussex Archæological is a flourishing so- This goodly volume of between three and hundred pages contains various interesting s read at its meetings, including one on rural paintings in Westmeston Church, first ht under notice in the *Builder*. The paper the Rev. C. H. Campion, and is illustratsd coloured and other engravings. There is paper on a Romano-British cemetery and man camp at Hardham, in West Sussex; n Decorative Tiles found at Keymer, by ev. E. Turner; and one on the Church of Sussex. All of these are illustrated by ivings. The volume contains various other s of more or less interest.

Sussex Archæological Society we observe, selected Ardingly for a meeting on the instant, when the members will, in addition ewing the Church, pay a visit to the family of the Culpepers, Wakehurst-place.

VARIORUM.

is always with pleasure we take up the new er of Dr. Lawson's *Popular Science Review* dwicke, publisher), as we are sure to spend a table hour or two with it ere we lay it down, s returning to it at the first opportunity. October issue contains an excellent paper r. E. Lankester, on good food, with some some advice to the Bantingites. There is tely paper on the Metric System, by Mr. J. ; with engraved illustrations of decimal ures; and of course various other interesting rs, as on Rock Metamorphism, on Coral, besides the usual reviews of scientific s, and the very full and valuable scientific mary of the month.——"Transactions of the ution of Civil Engineers in Scotland, vol. Glasgow: Bell & Bain. 1864." This volume ains some instructive papers, as on the ex- ve energy of heated water, by Dr. W. J. M. ine; on turned and bored joints for gas water main pipes, by Mr. J. Downie; on the ow water-works, by Mr. J. M. Gale; on a ulic engine for working bellows; and various subjects. Several of the papers are illus- d by engravings.

Miscellanea.

RKSHIRE ART UNION.—The Yorkshire Art- n, under good local patronage, opens its d exhibition in Leeds on this Saturday. collection contains many works of interest by of metropolitan and provincial reputation.

VERNMENT SCHOOL OF ARCHITECTURE.— is to be established, we hear, in connexion the Royal Engineer establishment at Chat- a school of instruction in architecture and ating.

THOGRAPHING BY STEAM.—A Boston genius invented a machine from which 600 to 1,000 ressions from stone may be taken in an hour. merly it was considered a good day's job, it d, for a competent workman to produce 250.

ONUMENT TO LESSING.—A tower has been ed in honour of Lessing, near his native of Kamenz, in Silesia, named "Lessing- n." It is 64 ft. high, according to our rity, the *Reader;* and there is a fine view its plateau over part of Saxony, Bohemia, Russia.

T. THOMAS'S CHURCH, BEREA, NATAL.—The opolitan bishop of Capetown has consecrated v iron church at Berea. The building is the of Mrs. Danby Harcourt, of Swinton Park, le, Yorkshire, and was originally designed ntended for the neighbourhood of the Con- . The inhabitants, however, being few in ber, were unable to raise funds for its erec- and it was removed to its present site,—a once occupied as a mission post by the first ionary to Natal of the Church of England. building is of Gothic form, and is composed rrugated iron, lined with felt and wood,— ing a small vestry, porch, and a spirelet con- ing a bell. The cost of its removal to its ent site, the erection and painting, with s, has been above 200*l.* It will accommo- about 100 persons.

PLASTER OF PARIS FOR PAINT.—It has been proposed to use ground gypsum instead of white lead as paint for outside work. It is said to be equally or more durable than white lead or zinc white, and if so deserves to be widely known, as the plaster is very cheap and easily obtained. Take equal parts of plaster and white lead, with oil enough to make it the consistency of cream, and run it through a paint-mill.

GROWING BENT GRASS. In Lord Palmerston's speech at Tiverton he mentioned incidentally an interesting fact concerning his Irish estate. He had, he said, 1,000 acres of blowing sand there, "where no blade of grass grew;" and "now, in consequence of having assiduously planted that sand with bent, which dies away after it has come to a certain growth, and is followed by grass, I have succeeded in covering the whole of that barren spot with grass."

AN IRON PLATE.—Messrs. John Brown & Co., of the Atlas Works, have succeeded in rolling an iron plate, 6 ft. by 7 ft., and 13½ in. thick. The idea of manufacturing so enormous a plate originated, we believe, with Captain Inglis, of the Royal Engineers, with a view of ascertaining if it would be desirable to protect casemates with such a powerful covering. The plate has been forwarded to Shoeburyness, where it will be exposed to a very trying test.—*Army and Navy Gazette.*

THE EXCAVATIONS IN CAITHNESS.—Mr. Samuel Laing, ex-Finance Minister of India, has been making farther excavations in the vicinity of Keiss Castle. Amongst the discoveries is part of a subterranean "dwelling, or place of sacrifice," as it is described. It is "built like the Picts' houses, with narrow passages and some small chambers, walled, paved, and roofed over, at a great expense of labour, with large unhewn stones, brought from the beach at some distance." Other "Picts' houses" have also been opened, besides a number of sepulchral tumuli, on the links of Keiss, and skeletons, including skulls, one of which Mr. Laing describes as closely resembling the Neanderthall skull, with excessively prominent mouth or proboscis. Stone implements, shell *débris*, and fragments of pottery, have also been found in connexion with human and other animal remains.

THE SALFORD ALBERT MEMORIAL.—At a recent meeting of the general committee to arrange for the inauguration of the Albert statue in Peel Park, the mayor reported that Sir Charles Phipps, in reply to a letter on the subject, said that, whilst appreciating the feeling displayed throughout the country in relation to the erection of monuments to the Prince Consort, the public ceremonials connected with their inauguration, gratifying as they were to the Queen, were yet very trying to her feelings; and he was sure it would be most consonant with the wishes of the people of Salford not to give her Majesty the pain of declining any application. It was determined by the committee that the bishop should be requested to present the statue to the mayor on behalf of the corporation. The executive committee submitted a report, in which they stated that they had agreed with Mr. Noble to complete the statue, including the pedestal fixing, and all incidental expenses, for 1,100*l.* It was stated that the statue would be ready for inauguration before the end of October.

RUNIC INSCRIPTION IN CUMBERLAND.—Last winter a shepherd discovered an old inscription on one of the large rocks at Barnspike, a long range of crags cresting the hills about three miles to the east of Bewcastle Church. The inscription is Scandinavian, or Old Norse, and may perhaps be read thus:—BARNE BIRITA AT GILLHES BUETH IAS UAS DAUTHR I TRICU ROB TE VAULKS AT FADRLAN NU LLANRGSEL. "Barna cut this in memory of Gillhes Bueth, who was slain in a truce by Robert de Vaulks (*now Vallibus*) for his patrimony, again coveted." The inscription is on the north-west side of a large crag and well protected from the effects of the weather, but is almost illegible. On the top of the crags, a few yards north of the inscription is an old "ring-barrow," in which possibly the bones of Bueth or Barna have been deposited; perhaps those of Barna, as the crags retain his name. A family of the name of Barron were owners of a small estate near the crags, down to a recent period. History and tradition record the Beuths as owners and builders of the castle at Bewcastle (Beuth's Castle); and also as owners or claimants of the barony of Gilsland, this Gilhes Bueth being the only son and heir.

FALL OF THE CEILING OF A CHAPEL.—The ceiling of the Primitive Methodist Chapel, Boston, has fallen. There had been service during the evening, and the ceiling fell about two hours after the congregation left. The ceiling joists had been separated from the cross timbers of the roof, owing to being inefficiently fastened in the first instance. The chapel was erected about twenty-five years ago.

THE WORKMEN'S INDUSTRIAL EXHIBITION, TUNBRIDGE WELLS.—This exhibition is said to have been a highly successful one. It has been visited by large numbers of persons. The articles exhibited included not a few specimens of architectural modelling, such as models of Yeovil Church, of Tunbridge Wells Grammar School, and of Huntingdon Chapel as it was and is, by means of one changing model; also of carvings, one of the specimens a cabinet and book done by Lady Caroline Nevill. Many of the exhibitors, however, belonged to the working classes.

WORKING MEN'S CLUB AND INSTITUTE UNION. The secretary to the Union (the Rev. H. Solly) has, during the last fortnight, attended meetings for the formation and resuscitation or encouragement of clubs and institutes in various parts of the country. Amongst the most important of these meetings we may mention those at Winchester, Southampton, Scarborough, Bradford, and Leeds. At a recent meeting of the secretaries of the London clubs, Mr. Sales described the nature of the scheme now being extensively carried out by the Ladies' Sanitary Association for instructing the working classes in lectures illustrated by selections from the Economic Museum, collected at Twickenham, and belonging to Mr. T. Twining.

ASCENT OF SALISBURY CATHEDRAL SPIRE.—On the 28th ult. James Matthews, a workman in the employ of Mr. Frederick Richard Fisher, builder, of the High-street, performed his annual feat of ascending to the summit of Salisbury Cathedral spire, for the purpose of oiling the vane. The spire, as is well known, is upwards of 400 ft. high; but, notwithstanding this altitude, he, with the utmost possible coolness, mounted the cross above the vane, and turned the latter round with his foot as he sat upon it. The ascent from the weather door is accomplished outside by means of twenty or more small iron handles, firmly fixed to the spire.

THE STATUE DISCOVERED IN ROME.—Signor Righetti having succeeded in exhuming the colossal bronze statue at last, the opinion of its representing a young Hercules, according to the Roman correspondent of the *Morning Post*, is confirmed by several circumstances, among which is that of a lion's skin forming part of the base. The feet are detached, but are fortunately not wanting. The height of the figure is 4 metres 25 centimetres, consequently superior to that of the Marcus Aurelius. The Marquis Marini has relinquished all claim to a share in the prize, there being a clear intervening space of half a foot between the base of the statue and the commencement of his property. The Government has no claim on the treasure either, reserving to itself only the right of purchase at an equitable valuation. It appears that the statue will be bought for the Vatican Museum, and placed in the centre of the octagonal or Belvedere Court, which will be fitted with a glass roof on purpose. The actual value of the bronze is calculated at about 3,000 scudi, and that of the gilding on it at 1,000 scudi more, but it is conjectured that 100,000 scudi (21,000*l.*) will not be considered an out-of-the-way price for the statue.

STONE-CRUSHING MACHINE.—A new machine, manufactured as Blake's stone-crushing machine, by Mr. H. R. Marsden, of Leeds, has been patented in Great Britain and in several foreign countries. It is designed to break stones into fragments, to be used for road-making, railroad ballasting, concrete, or other purposes, and to crush ores or minerals, break flints for crockery-ware, &c. Every revolution of a crank causes the lower end of a moveable jaw to advance towards a fixed jaw about a quarter of an inch, and return. Hence, stones dropped in between the convergent faces of the jaws are broken by a succeeding bite, and the fragments then fall lower down and are broken again, and so on until they are made small enough to pass out at the bottom. The distance between the jaws at the bottom limits the size of the fragments, and may be regulated at pleasure. The machine can be made of any size. The usual length of the machines is from 8 ft. to 8½ ft.; height to top of wheels, 5 ft.; width, from 4 ft. to 5 ft.

Stonecutters' Strike in Dublin.—According to the *Dublin Builder*, a serious strike has taken place in that capital, the cause being the asserted right of the stonecutters to set out stonework as well as work it, which the brick and stone layers equally claim as their prerogative. Tendency being towards the latter, the stonecutters have struck.

The late Mr. Charles Winston.—Many of our readers will hear with great regret of the death of Mr. Winston, well known by his publications on stained glass, and his endeavours to improve the manufacture of glass. Mr. Winston died suddenly in his chambers in the Temple, on Monday last. At the inquest, Mr. Tomlinson Brookes, surgeon, deposed that he believed death was the result of disease of the heart, produced by over-work and prolonged abstinence from food. Mr. Winston was deputy County Court Judge, and was only forty-nine years of age.

Worcester Diocesan Architectural Society. The members of this society and their friends have made an excursion to Lichfield, for the purpose of inspecting the cathedral of that city, recently restored and re-arranged under Mr. Scott's direction. The party proceeded from Shrub-hill station to Dudley, and thence by the South Staffordshire line to Lichfield. In order to allow more time for the inspection of the cathedral, a contemplated visit to St. Chad's Church, which is situate at some little distance from the city, was abandoned; and the excursionists went direct to the new Free Public Library and Museum, which contains an interesting (though small) collection of antiquities, casts, specimens of natural history, &c. A party of about forty visited the cathedral. Canon Hutchinson accompanied them, and pointed out the principal objects of interest. The annual meeting of the society and an excursion to Norton, Stoulton, and Pershore, were to take place on Tuesday.

Value of Property in Lombard-street.—The banking premises of Hayward, Kennard, & Co., in Lombard-street, were purchased some seven or eight months since, by the Mercantile and Exchange Bank, for 20,000*l*. The house in question has a frontage of but 54 ft., by a depth of perhaps a third less; but the situation is admirable, being in the very centre of what is termed the banking world. It is stated that the directors of the Mercantile and Exchange Bank soon perceived that they had got a bargain, as they let the first floor of the house to the Asiatic Banking Corporation for 1,000*l*. a year. The amalgamation of the London Bank of Scotland with the Mercantile and Exchange Bank having made it necessary to value the premises in Lombard-street, the directors of the Bank of Scotland have just paid 10,000*l*. to the shareholders in the Mercantile and Exchange Bank; as their proportion of the increased value of the premises, which are now estimated as worth 40,000*l*.! The value has thus been doubled within the year.

Monumental.—A carved head-stone has been recently put up in the Coventry Cemetery. The design exhibits a sunken panel with a mourning border of black marble, at the four corners of which are four varieties of flowers, the rose denoting bloom and health; convolvulus, delicacy and frailty; poppy, sleep and death; and heartsease, rest and peace everlasting. The recording angel is shown in the centre of the panel as having inscribed the date of decease, and in the act of ascending through a stream of light to the final resting-place. The panel in the pediment has a medallion profile of the deceased, and filled in with foliage. The design is by Mr. V. Wyatt, of London, and the monument was executed by Mr. R. L. Boulton, of Worcester.——A monument has recently been erected in the inner chapel of South Carlton Church, Lincolnshire, by Lord Monson, in memory of the late Lord and Lady Monson, and some other members of the family. This monument, which is of Italian workmanship, is an almost exact copy of one erected in the year 1652 in one of the side chapels in the church of the Santissima Annunziata at Florence, by Florentine Foggini. The Monson monument has been executed at Florence in the studios of the sculptors Bencini and Bartolini, under the direction of, and from drawings and models prepared by, Signor Insom, with the permission of the clerical authorities. It is somewhat smaller than the original, but of similar proportions, and is affixed to the west wall of the inner obituary chapel.

Fever at Liverpool.—The prevalence of fever in the town was the principal subject of discussion at the meeting of the Health Committee last week. Mr. Alpass and the other members of the deputation who attended the Social Science Congress at York seem to have returned strongly impressed with the advisability of establishing places for disinfecting the clothes of fever patients by means of hot air. It is certainly time something was done to check the epidemic. The increase of fever, according to the local *Mercury*, is quite startling. In the week before last there were 207 patients in the workhouse hospital, and that was an exceptionally high number, but last week there were no fewer than 260.

Improvement of Lincoln's-Inn Fields.—Sir: In these days of development of national taste and improvement of all sorts, when London and Paris are emulating each other as cities contending for the palm of attraction to the foreigners, would it not be an improvement to the much-frequented though somewhat dreary Lincoln's-inn-fields, if the benchers—or those with whom the power lies—were to remove the long ugly west wall of their gardens, which separates them from the "fields," substituting in its place a suitable iron fencing? This would throw open to view the hall and library, improve the general aspect of the locality, and the circulation of air. Although the local residents are but a scanty few, there are few parts of the metropolis more frequented by men of business from all parts of the kingdom than Lincoln's-inn. Such an opening, too, on the score of health, a point in which we are all interested, would be desirable, as a boon to the crowded population dwelling in and around Clare Market on the one side, and the Holborn purlieus on the other,—people who know of no "vacation" or "out of town" whereby to give their lungs and brains a seasonable airing.—Curling Wig.

Exports of the United Kingdom.—The official accounts of the export trade show an increase in the month ended 31st August, from 14,088,814*l*. in 1863, to 16,274,269*l*. in 1864; and on the eight months, ended 31st August, from 89,751,851*l*. in 1863, to 108,716,219*l*. in 1864. Flint glass has increased in the eight months, from 62,653 to 71,625 cwts.; machinery (other than steam-engines), from 1,608,872*l*. to 1,933,850*l*.; pig and puddled iron, from 312,805 to 320,410 tons; wrought-iron, from 71,801 to 72,380 tons; unwrought steel, from 17,945 to 19,992 tons; telegraphic wire and apparatus, from 92,580*l*. to 163,804*l*.; red and white lead, and litharge of lead and lead ore, from 4,465 to 4,571 tons; and painters' colours, from 299,061*l*. to 340,052*l*.; but window-glass seems to have fallen off from 42,783 to 41,572 cwts.; and plate-glass, from (in value), 44,590*l*. to 42,971*l*.; steam-engines, from 1,030,469*l*. to 998,125*l*.; bar, angle, bolt and rod iron, from 214,572 to 200,319 tons; railroad iron, from 321,231 to 295,887 tons; iron castings, from 58,738 to 46,375 tons; hoops, sheets, and boiler plates, from 89,657 to 83,418 tons; lead, pig, rolled, sheet, piping, tubing, and lead shot, from 26,106 to 22,605 tons. The figures, taken as a whole, however, are considered to be extremely satisfactory.

Masters taking their Workmen into Partnership.—The *Glasgow Times* says:—"The dawn of a new era—a partnership of capital and labour—between master and workman has been inaugurated, the following facts regarding which have been communicated to us from a source on which we can rely:—The old and respectable firm of Messrs. Spence & Wilson, flint-glass manufacturers in York, having lately increased the wages of their workmen from 10 to 15 per cent., have since then taken an inventory of their works and stock-in-trade, which have been valued at 100,000*l*. The old partnership has been converted into a limited liability joint-stock company, one half of the capital being taken by Messrs. Spence & Wilson, 47,000*l*. otherwise taken in shares, and 3,000*l*. placed to the credit of their workmen; which arrangement was duly communicated to the secretary of the Flint Glass-makers' Society in the York district, who is one of the *employés* in the works. We also learn that the representative of the working-class partners in the York Flint Glass Company (Limited) was informed that the workmen might expect to realise at least 300*l*. per annum as their share of the profits, to be divided yearly among them in proportion to their respective wages, and thus carrying out the co-operative principle of giving dividends according to merit."

Hereford Drainage.—The Letton drainage works, which were commenced in May last by Messrs. Brassey & Field, having been completed Mr. S. Barlow, sub-contractor, gave the whole the men employed under him, about 200 number, a dinner, at the Swan Inn, Letton.

Welding by Hydraulic Pressure.—A series of experiments have lately been made at Par by M. Duportail, engineer, in the workshops the Western Railway, to ascertain whether ir might be welded by hydraulic pressure, instead of by the sledge-hammer. The latter, indeed has not a sufficient impetus to reach the ve core of the metal, while continuous pressure ac indefinitely to any depth. In the experimen alluded to, M. Duportail caused two iron bar 1½ in. in diameter, and heated to the weldin point, to be placed between the piston and th top of an hydraulic press. The bars we welded together by this means with extraord nary ease, the iron being, as it were, knead together, and bulged out at the sides under t pressure. The action of the press was suspende when the part welded was brought down to th thickness of the bars. After cooling, the welde part was cut through, to examine the insid which was found perfectly compact. To try i one of the halves was placed under a forg hammer, weighing 1,800 kil., and it was no until the third stroke that the welding was di covered.—*Galignani.*

TENDERS.

For the erection of convent, Notre Dame, Plymouth Mr. Jos. A. Hansom, architect. Quantities by Mr. Fre Chadwick: -

Elliott	£6,396	0	0
Hill & Keddle	5,860	0	0
Henshaw	5,871	0	0
Sawyer	5,825	0	0

Third Thousand. Price 1d. "The Social Condition of the Labouring Classes, resulting from the state of their Dwellings and the Beneficial Effects of Sanitary Improvement in Dwellings and the Beneficial Effects of Sanitary Improvement in Dwellings as adopted in England." By HENRY ROBERTS, Esq. F.S.A. Price 2d. Working Drawings on a large scale, with specifications, &c. of Agricultural Labourers' Cottages and for Dwellings adapted to Towns or Villages. Each Design complete on one sheet. Price 2s.

MESSRS. LAKE & HOPKINSON, ARCHITECTS and CONSULTING SURVEYORS.

Quantities of Architects' Work accurately taken.

Offices, No. 1, ADELAIDE-PLACE, LONDON BRIDGE, E.C.

A SURVEYOR, of considerable practical experience, will be glad to arrange with Architects and Builders for taking out Quantities, Preparing Estimates Measuring up Work, Arranging Disputed Accounts, &c. The highest references can be given.—Address, M. Office of "The Builder."

PERSPECTIVES, GEOMETRICAL and other DRAWINGS,

MADE and COLOURED by the Advertiser, from rough Sketches or otherwise.

ADDRESS, C. 70, CAMBERWELL NEW-ROAD, S.

MR. JAMES FENTON, ENGINEER and SURVEYOR for six years to the Croydon Local Board of Works REMOVED to 19, GREAT GEORGE-STREET, WESTMINSTER.

PHOTOGRAPHY.

COLAMORE & BULLOCK, ARCHITECTURAL AND ENGINEERING PHOTOGRAPHERS,

31, REGENT-STREET, WATERLOO PLACE, S.W.

RAILWAY and ESTATE SURVEYING and LEVELLING,

In any Part of the Country.

By C. C. No. 17, Hill-street, S.W.

MR. E. RENAULT, Architect Sculptor, respectfully solicits the patronage of Gentlemen, Architects, and General Contractors, for all kinds of Ornamental Sculpture, as well as Designs of every description of Interior and External Decorations for Public Buildings.—Address, 14, Finsbury-place South, E.C.

CIVIL ENGINEERING & SURVEYING. PRACTICAL FIELD INSTRUCTION given in Civil Engineering, Surveying, Levelling, &c. on moderate terms.—For prospectus apply at the Offices of Messrs. HYDE, SMITH, & LEWIS, Civil Engineers, Surveyors, Architects, &c. 24, Guildford street, Russell-square.—N.B. Day and Evening Instruction given in Architecture, Drawing, Colouring, Taking out Quantities, &c.

MR. MARDON, ARCHITECTURAL DRAUGHTSMAN and COLOURIST. Perspectives, Competition, and other DRAWINGS prepared.—Address, Bedford Chambers, Southampton-street, Strand, W.C.

LAND, ENGINEERING, and MINERAL SURVEYS EXECUTED, Maps Revised or Copied. Farms and Estates Valued, Civil Engineering, Accidents on Railway Surveys, &c. by ROBERT ELLIOTT, 17, Corn Market, Derby.

TO ARCHITECTS, &c.

JOHN EDWARD ORMES continues to prepare Bills of Quantities, Designs, Estimates, Specifications, measure up works, Survey Dilapidations and Railway Compensations, either by Commission or by special agreement.—Address, 69, Leadenhall-street, E.C.

ARCHITECTURAL COLOURING for EXHIBITION or COMPETITIONS. Drawings coloured and outlined by an Artist of great experience at liability. Terms moderate.—Address, CANALETTI, Office of "The Builder."

STANDIDGE & CO.

LITHOGRAPHERS, DRAUGHTSMEN, &c. 36, OLD JEWRY, CITY, E.C.

Are prepared to execute plans FOR PARLIAMENTARY DEPOSIT, and every other description of Lithography, TO ANY EXTENT, with promptitude and economy.

PARLIAMENTARY WORK. — An ENGINEERING SURVEYOR of long experience is open to an ENGAGEMENT.—Address, E. O. 2, Grosvenor Villas, Stockwell-green, S.

BUILDERS' PARTNERSHIP. — WANTED, by a person who has been engaged in the active management of a large business for fifteen years a PARTNERSHIP in a well established BUILDING BUSINESS. Any one desirous of such can be introduced, but the Advertiser's object is to enter as a working Partner, with a small but advancing interest in lieu of capital.—Address, K. H. Office of "The Builder."

TO BRICKMAKERS.

A MANAGER WANTED, for extensive BRICK and TILE WORKS, in the North of England. He must be practically acquainted with brickmaking, both by hand and machinery, in all its departments, and with all sorts of clay, and he must also understand bookkeeping. Salary £2 per week, and a free dwelling house near the works.—Address (in applicant's own handwriting), stating age, and full particulars of experience, B. C. Office of "The Builder."

APPRENTICES. — WANTED, several strong intelligent YOUTHS as APPRENTICES, in a Turret Clock Manufactory.—Apply to J. FAIRER, 180, St. George-street East, London.

AN ARTICLED PUPIL or APPRENTICE is required by an ARCHITECT and SURVEYOR having a good practice in London. Premium 10 guineas. Can reside with the principal if required.—Address, "ARCHITECT," care of Mr. G. Street, Advertising Offices, 30, Cornhill, E.C.

APPOINTMENT of SURVEYOR of HIGHWAYS.—The Highway Board for the Croydon District require the services of a competent SURVEYOR. The highways within the district (exclusive of footpaths) are in extent about 18 miles. The Surveyor must devote his whole time to the duties and keep the labour accounts, &c. Salary, 150l. per annum, to include the keep of a horse, which he must provide for the purposes of his office, and enter into a bond, in the sum of 100l., with two sureties, to be approved by the Board, for the due performance of the duties. Applications in the handwriting of the candidates, stating age, and accompanied by testimonials as to character, must be sent to me on or before the 13th day of OCTOBER next. Selected candidates will receive notice to attend the Board on the day when the appointment will be made.—By order,

ALFRED G. BLAKE, Clerk to the Board.

No. 23, George-street, Croydon, 29th September, 1864.

GLASS PAINTERS.—WANTED, experienced HANDS in FIGURE PAINTING. Liberal terms and permanent employment to really competent assistants.—Apply to CLAYTON & BELL, 311, Regent-street, W.

HIGHWAY BOARD, ROCHESTER DISTRICT. The Highway Board of the above district will, at their meeting, to be held on the 11th day of OCTOBER next, at the BULL HOTEL, Rochester, at TWELVE o'clock, be prepared to receive APPLICATIONS from CANDIDATES for the office of ASSISTANT SURVEYOR to this Board. A practical knowledge of the management and repair of highways will be requisite. The remuneration will be according as all other expenses, will be fully yearly salary, including hire, 75l. per annum; but if the Board should deem it necessary that the whole time of the Assistant Surveyor should be devoted to the duties of his office, that then the salary will be 75l. per annum. He must reside within the district, at such place as the Board may approve. Candidates must state their age, and forward testimonials as to their qualifications, character, and general competency. Applications to be marked, "Assistant Surveyorship." Applicants for the above office must be in attendance at ONE o'clock on the day above mentioned for the meeting of the Board, and the person elected will be required to give satisfactory security for the due performance of the duties.—By order of the Board. CHARLES MARTIN, Clerk.

Strood, September, 1864

LAVENHAM HIGHWAY DISTRICT, SUFFOLK.—To SURVEYORS and OTHERS.—A meeting of the Board of the above District will be held at the Lion Hotel, Lavenham, on FRIDAY, the 14th day of OCTOBER next, at ELEVEN o'clock, when prepared to receive Sealed APPLICATIONS, with testimonials, from persons willing to become Candidates for the Office of DISTRICT SURVEYOR, at a salary of 75l. per annum, Candidates to appear in person. No travelling or other expenses allowed. The District consists of 80 (the parish of Lavenham alone is 10 miles and 1,057 chains). The Surveyor will be required to keep two horses, and the Assistant Surveyor one horse, and both officers to reside in the District, and devote their whole time to the duties of their respective offices, and commence such duties on the 1st of November next. The Surveyor must provide surety satisfactory to the Board.—By order,

RICH. NEWMAN, Clerk.

Lavenham and Hadleigh, 26th September, 1864

PARISH of LIVERPOOL.—To ARCHITECTS.—The Select Vestry of this Parish are prepared to receive APPLICATIONS from Architects qualified by professional knowledge and practical experience, to fill the Office of PARISH SURVEYOR; the primary duty of the Office being the valuation of property for the Poors Rate. Pattern Sheets, and all information, may be had of R. LANGLEY, Agent, East Cowes-park, Isle of Wight.

TO BRICKMAKERS. — All Parties who BURN BRICKS in CLAMPS are invited to inspect the NEW MODE of SETTING, patented by Mr. ROBERT WHITE, and which may be seen in operation at the Brickfields of
J. B. WHITE & BROTHERS, Erith, Kent.
The advantages of this plan are two fold.
1st. Nearly all the bricks are burnt into stocks, and the yield of in- for fertile bricks is reduced from 33 to about 10 per cent of the total make, which in itself represents a large permanent saving.
2nd. The bricks are so much improved in colour and soundness as to give them a considerable additional value in the market over com- mon stocks.
Licenses for use of the Patent granted to Brickmakers, on applica- tion to the Patentees 17, Millbank-street, Westminster.

ROYAL POLYTECHNIC.—PAGANINI'S GHOST. — Engagement of this Novel, Extraordinary, and Artistic Sensation, which was received with such an enthusiastic *furore* upon the first night of its production at this Institution. Paganini's Ghost will perform daily at 4 0 and 8 45 all those difficult variations on one string and with one hand for which the late Paganini was so celebrated.—Polytechnic re-decorated and re-opened.—Admission to the whole, 1s.

TWICKENHAM PARK, near RICHMOND.—Most Eligible BUILDING LAND TO BE LET on Lease, for Ninety-nine Years, in Large or Small Plots. Money advanced, if required.—For particulars, apply to W. BACKHURST, at the Estate Offices, Twickenham Park; or EDWARD GUILLAUME, Esq. 14, George-street, Mansion House, London.

SURBITON. — TO BUILDERS and OTHERS.—LAND TO BE LET, on building leases, five minutes' walk from the station, and close to the river, for houses of not less than £35 a year rent. A portion of the money will be advanced if required.—Apply to Mr. MUDIE, Victoria-road, Surbiton.

A FREEHOLD MANSION TO BE SOLD.
The elegant Furniture may be had at a valuation. There are four reception-rooms, two being 50 feet in length; eleven best bedrooms; stabling for eight horses at present, with room for four carriages; suitable servants' offices; excellent ornamental grounds, with greenhouses, in all 2¾ acres; gravelly soil; near Surbiton Station, South Western Railway, half a mile from Windsor Great Park, and fifty minutes from the Waterloo Station.—Apply to J. BOWEN MAY, Esq. Solicitor, 57, Russell square.

RAMSGATE.—To BUILDERS, CAPITALISTS, and OTHERS. —TO BE SOLD or LET, several valuable Plots of FREEHOLD LAND, situate on the East Cliff, including the site of the proposed new Hotel.—Apply to WALLER & SON, 4, Lyall-street, Belgrave-square, London; or of Messrs. FRIEND & VINTEN, House agents, Ramsgate.

FREEHOLD LAND TO BE SOLD, or LET on Building Leases, in Glengall-road, Old Kent road And also, near Forest Hill Station. Also, FREEHOLD WHARF, on the Surrey Canal, near Old Kent-road.—Apply to Mr. MAY, Acorn Timber Wharf, Old Kent-road.

CITY of LONDON.—An extensive PLOT of FREEHOLD BUILDING-GROUND, suitable for the erection of Warehouses or Manufactories, TO BE LET by Tender, on a Building Lease, for the term of 80 years. It is situate on the west side of Redcross-street, Cripplegate (near to Wood-street), and contains a frontage of more than 73 feet and a depth of 107 feet, with an area of about 8,000 superficial feet.—Further particulars, with a plan of the ground, may be obtained of Mr EDMUND WOODTHORPE, Architect, 28A, Basinghall street; of Mr. A. J. BAYLIS, Solicitor, Church-court, Old Jewry; and at the Office of the Vestry Clerk, Cripplegate.

VALUABLE PREMISES TO LET, containing an area of 1,500 square yards, and situate one mile north of the Bank. They have lately been occupied by a Timber Merchant, who realized a large fortune in the trade; and they are well adapted for carrying on that business.—Apply to E. & W. BURGE, Bridge Wharf, City-road, E.C.

WATERSIDE PREMISES, City-road.—Messrs. FULLER & HORSEY are instructed to LET, on LEASE, from Michaelmas next, extensive WATERSIDE PREMISES, occupying a site of 21,000 superficial feet, situate on the Wenlock Basin, City-road, and comprising a spacious and substantial modern brick built manufactory of two floors, engine and boiler houses, with 50 horse power steam engine and three Cornish boilers, range of 5 brick-built offices, and paved yards with gateway entrances. There is a water frontage of about 207 feet.—For further particulars, apply to Messrs. FULLER & HORSEY, 13, Billiter-street, London, E.C.

FREEHOLD PREMISES, near Fenchurch-street, City.—A HOUSE, being No. 6, Fen-court, TO BE LET, on LEASE, for 50 years from Lady-day next, at a ground rent. The premises cover an area of 1,500 superficial feet, and the entire property is well adapted for first-class offices. Tenders are required for the above, stating the amount of rent which will be given; but no lease to exceed one less than 2,500 in reversion, upon plans subject to approval. The proprietors do not bind themselves to accept the highest or any Tender. Tenders, in writing, to be sent in by FOUR o'clock on TUESDAY, the 25th of OCTOBER next, addressed to Mr. ROBERT GRACE, 34, Moorgate street, E.C. Particulars may be obtained of Mr J. G. HEPBURN, Solicitor, 12, Copthall court, E.C.

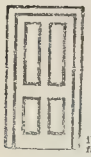
BISHOPSGATE STREET, near to.—TO BE LET or SOLD, Two Plots of FREEHOLD LAND, close to the main street, containing respectively about 3,200 and 6,000 superficial feet.—Apply to Mr HENRY DAWSON, Architect and Surveyor, 16, Finsbury-place South, E.C.

A NEWLY-BUILT FACTORY, with three floors and basement, suitable for any business, together with double-stall stable, and five-room dwelling-house, TO BE LET. A few minutes' ride from the City.—Address, C. MARSDEN, near the Bridge, Kingsland-road.

EXHIBITION ROOMS.—TO BE LET, until the end of February, the GALLERY of the SOCIETY of BRITISH ARTISTS, consisting of five large rooms.—Inquire on the Premises.
Suffolk street, Pall-mall.

VALUABLE and Extensive WATERSIDE PREMISES, close to Queen-street and Southwark Bridge, in the city of London.—To Wharfingers, Bonded Warehousemen, and others.—TO LET, the extensive block of newly-built WAREHOUSES known as QUEENHITHE DOCK, having a frontage of 144 feet to the river Thames, and almost exclusive use of the dock, where vessels of 150 tons can lay by. Further particulars of Messrs. DEBENHAM & TEWSON, 80, Cheapside.

BLACKHEATH.—First-class BUILDING LAND TO BE LET, within a few minutes' of the Station.—Apply to FRANCIS FULLER, 8, Adelphi terrace, Strand.



EXTENSIVE MANUFACTURING PREMISES TO BE LET, about three miles from London Bridge, with every facility for land and water carriage. They include a square about 300 feet by 150 feet, and comprise a Sawing Warehouse, with Workshops, Chimney-shaft, Stables, &c., with or without one or two Acres of Land.—For particulars, apply to Messrs. DEBENHAM & TEWSON, 80, Cheapside.

TO BUILDERS.—TO BE DISPOSED OF, on account of the death of the Proprietor, an excellent old-established BUILDER'S BUSINESS, for many years successfully carried on by the late Mr. Robert Curtis, at Romford.—For particulars apply to Mr S. FLETCHER, Auctioneer, Romford, Essex.

TO BE DISPOSED OF, a good JOBBING and COMPETITION BUILDER'S BUSINESS, in the West end. Old-established, and doing about a 2,000 per annum. Only reason of present proprietor giving it up being want of capital.—Further particulars, apply, Messrs. NEW & CUMING, 2, Dorchester-place, Blandford-square; or Mr. J. NAYLOR, 253, Oxford-street.

TO CARPENTERS.—TO BE DISPOSED OF, a JOBBING BUSINESS, in the above. Two men employed. Price 20 Leaving through ill health.—Apply to Mr. LATCHFORD, Timber Merchant, 61, Wardour-street, Soho.

WANTED, by a Person who can command about 1,200l. a BUSINESS connected with the Building Trade, either in the iron, stone, or bricks, lime, &c. Would not object to a partnership in a well-established business.—Address, with full particulars, to K. L. Office of "The Builder."

HYDRAULIC LIME and ROMAN CEMENT, manufactured by LLOYD JONES & CO. Halkin Works, Holywell, Flintshire. The Halkin Hydraulic Lime is the same as used in the construction of the Liverpool Docks, Manchester, and various waterworks, collieries, and mines throughout the country, being so long celebrated for its strong cementitious and connecting powers for masonry in water. Can be supplied by rail or water to any part of the kingdom, either in lump (loose), or ground, and in barrels and bags. The Limestone can be had in full cargoes, also their Cement in barrels, which is of a very superior quality and warranted pure. Orders to be accompanied by a banker's reference. Apply at the Works; or to E. & W. AARON, Agents, 86, South John-street, Liverpool.

Prices and particulars furnished on application to Mr. EVAN EVANS, Manager, Pary's Mine Works, Holywell, Flintshire.
The Company guarantee the quality of the Lime to be equal to that used by the Engineer of the Liverpool and Birkenhead Docks.
Agents wanted. No applications attended to without a banker's reference.

TERRA COTTA and Fine STONEWARE POTTERY, warranted to stand Frost
JOHN M. BLASHFIELD, STAMFORD POTTERY, STAMFORD, LINCOLNSHIRE, has greatly improved and economised the manufacture of TERRA COTTA and Fine STONEWARE for ARCHITECTURAL PURPOSES. He is able to make it of various new colours, so as to harmonize with Marble, Portland, and other Stones, and equal in hardness to Granite.
A Medal at the International Exhibition was awarded him, in Class 10, Section C, "Architectural Objects, for "Perfection in manufacture and beauty of form." A Medal was also awarded for "Terra Cotta."
Moulded Bricks, String Courses, Copings, Cills, Trusses, Balusters, Capitals, Crosses, Terminals, Vases, Statues, Brackets, Consoles, Garden Edging, Guttering, six, nine, and twelve inch Paving Tiles, &c. &c.
Also Plain and Mosaic Pavements for Halls, Churches, Conservatories, &c. in all colours.
London Office, 377, Oxford-street, W.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No 21 Wharf, Macclesfield-street North, City-road Basin, N. finally, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and 3rdly, that the "Reports of the Jurors," page 581, of the Great Exhibition, 1851, note the grant of a First-class Medal and rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

TWO PRIZE MEDALS AT THE INTERNATIONAL EXHIBITION
MAGNUS'S ENAMELLED SLATE obtained the Medal of the Society of Arts; the Prize Medal at the Great Exhibition, 1851; Two First-class Medals at the Paris Exhibition; and Two Prize Medals at the International Exhibition of 1862.
Trashy imitations of this beautiful material are being palmed upon the public. Architects are therefore requested to see that the Name of "MAGNUS" is upon each article.
Chimney-pieces, Billiard-tables, Table-tops, Baths, Wall-linings, &c., a New Illustrated Catalogue of which can be had at the Pimlico Slate Works, 39 and 40, Upper Belgrave-place, Pimlico, S.W.

PRIZE MEDAL TO MAW & CO. INTERNATIONAL EXHIBITION, 1862.
IMPERISHABLE TESSELATED PAVEMENTS, combining a highly decorative and economical substitute for ordinary floors of their perishable coverings MAW & CO'S Pattern-book, designed by M. Asphalte for Railway Arches and Iron Bridges.

READE & HEWITT'S PATENT PNEUMATIC PAN and SELF-ACTING WATER CLOSETS, RAILWAY URINAL, and SEWER FLUSHING APPARATUS.
The simplest, strongest, and cheapest Closets manufactured, acting efficiently with or without Supply Cistern, and at high or low pressure. Specially adapted for railway stations, offices, public buildings, workshops, or any situations where subjected to severe usage. Prevents waste of water, saves piping, cranks, wires, service-box, and all the complicated apparatus of self-acting closets.
The Self-acting Pneumatic Flushing Vessel flushes ranges of urinals regularly at intervals, the time between the discharges being regulated by a simple tap, thus saving an immense quantity of water, which ordinarily runs to waste.

Re-Flush Closet, complete	£2 12 6
Best Self-acting Closet, complete	2 15 0

PATENTEES and MANUFACTURERS, SHORT STREET, NEW CUT, LAMBETH.
T. L. & SON find it necessary to state that their manufactures have their NAME legibly marked thereon.

GUTTA-PERCHA MILL-BANDS.—The Gutta-Percha Company beg to state that the increasing demand for the Gutta Percha Stamping for Driving bands, Lathes' reins, &c. fully justifies the strong recommendations they have everywhere received. Their durability and strength, permanent contractibility and uniformity of substance; their non-susceptibility of injury from contact with oils, grease, acids, alkalies, or water; and the facility with which the only joint required can be made in bands of from 200 to 300 feet long, render them superior to leather for almost all working purposes, and decidedly more economical. Every variety of Gutta Percha Articles, such as Tubing, Soles, Pump-buckets, Fire-buckets, Bosses, Union-joints, Flasks, Bottles, Bowls, Toilet-trays, Curtain-rings, Galvanic Batteries, Talbotype Trays, &c. &c. manufactured by the Gutta-Percha Company, and sold by their Wholesale Dealers in town and country.

Valuable Freehold Building Land. Eight excellent Residences of the value of 550l. per annum, and stabling, in the rapidly-improving town of Worthing, Sussex.

MESSRS. PARSONS & SON have been favoured with instructions to SELL by AUCTION, in lots, at the STEINE HOTEL, Worthing, on WEDNESDAY, OCTOBER 19, 1864, at TWO for THREE o'clock, the following important FREEHOLD PROPERTY.—Several highly desirable FREEHOLD BUILDING PLOTS, with frontages to the sea, and to Steine-road, suitable for the erection of first-class abodes. EIGHT commodious RESIDENCES, being Nos. 8, 9, 10, 11, 12, and 14, and TWO VILLAS, on the Goth. style, situate on Park crescent, all of which are let to genteel tenants, and two in hand. Park crescent, one of the most attractive features of the western end of Worthing, is screened from the public road by a double row of trees, and the enclosed ground with its charming grounds have been laid out with ability, and the shrubberies have attained luxuriant growth. Buyers of the plots and residences will become entitled to the use of the ground. The Villas and the residences are furnished and the furniture may be had at the option of the respective purchasers. The well-known NURSERY GROUND and BUILDINGS thereon (in the occupation of Mr. Bushby, until December 25th next, lying to the north of Park crescent, having a frontage to the Findon-road, of 320 feet, and a depth of 455 feet, affording ample room for a large nursery, admirably adapted for the erection of several villas, a class of property in much request at Worthing. Also, PLOTS of BUILDING LAND, lying between Park crescent and the nursery ground, and STABLING and COACH-HOUSES behind Park crescent.—The property may be viewed, and particulars, with a plan of the estate and conditions of sale, had of Messrs. HUNT, CURRELY, & HOPER, Solicitors, Lewes; Messrs. SENIOR & AITREE, Solicitors, 2, New Inn, London; at the Steine Hotel, Worthing; Mr. W. L. BLAKER, Builder, Chapel street, Worthing; and of the Auctioneers, 9, Marine-parade, Brighton.

Sale of 200,000 superior Building Bricks, at Binfield, near Wokingham, Berks

MESSRS. DALLEY & SON are instructed to SELL by AUCTION, on WEDNESDAY, the 12th day of OCTOBER, 1864, at ONE o'clock in the afternoon, in the BRICK FIELDS near the Bee Hive Inn, Binfield, situate about midway between Bracknell and Wokingham, about 200,000 superior kilnburnt RED BUILDING BRICKS; also a quantity of Splay, Pilath, Rubbing, and Cutting Bricks, Club and Paving Bricks, Plain and Ornamental Roofing Tiles, Coping, and other effects.—The above may be viewed three days previous to the sale, at catalogues had by sending stamped address to Messrs. DALLEY & SON, Auctioneers, Wokingham.

BAKER STREET, ENFIELD TOWN

MR. A. RICHARDS will SELL by AUCTION, on the PREMISES, on MONDAY, OCTOBER 10, at ONE, the MATERIALS of TWO HOUSES, in Lots, to be taken down by the Purchasers comprising 30 fire bricks, tiles, timber of roofs, floors, partitions, &c. &c.—May be viewed. Catalogues obtained of HOBBS & SON, Plumbers, Enfield; and of the Auctioneer, Tottenham.

NORTH CAMP, FARNBOROUGH HANTS.—Valuable Freehold Building Land, with unusual facilities for payment of the purchase-money.

MESSRS. EDWIN FOX & BOUSFIELD are favoured with instructions from the Directors of the Farnborough and Aldershot Freehold Land and Grand Event Society (limited) to SELL by AUCTION, at the QUEEN'S HOTEL, North Camp, Farnborough, on WEDNESDAY, OCTOBER 19th, at ELEVEN for TWELVE o'clock, in 10 Lots, the 11th portion of their very valuable and important FREEHOLD ESTATE, most advantageously situate, at Farnborough, adjoining the South Camp, and comprising a variety of charming sites for villa residences, varying in extent from a quarter of an acre to an acre each many of them studded with ornamental timber, and commanding all of which will form the subject of a new church, together with numerous plots for cottages and some first-rate pastures for sheep, fronting the high road, and other equally-valuable and well-drained frontages, all of which will form the subject of sale in such manner in which they are laid out, and their proximity to the central railway stations and to the railway stores become important feature in the choice. The demand for lots of every class is very great, and high rentals are readily obtained. Within the last ten years the civil population of Aldershot has increased tenfold. There is excellent water and plenty of sand and gravel. Nominal rates. The terms of payment will be remarkably easy, viz. a deposit of 5 per cent. and the remainder by instalments, extending over ten years, with interest at only 4 per cent. and subject to the most moderate and fair restrictions as to the buildings to be erected thereon. The great success which has attended the two previous sales has induced the Directors to enlarge the thoroughfares materially, and which will be the last sale during this year. The estate may be viewed, and particulars had of Messrs. PATTESON & CORBOLD, Solicitors, Nos. 17 and 18, New Bridge-street, Blackfriars; of EDWARD CHATFIELD, Esq. the Society's Managing Director, 17, New Bridge-street; of HENRY CURREY, Esq. Surveyor, Lancaster place, Strand; at Garraway's, Sale-rooms, Change-alley, Cornhill; at the Place of Sale; at the Inns at Farnborough, Aldershot, Guildford, and Reading; and of Messrs. EDWIN FOX & BOUSFIELD, 41, Coleman-street, Bank.

Beautiful Park like Freehold Land, at Farnborough, Hants, with a charming Site for a Mansion, in a ring fence, undulating, and open to the south and eastward, 25 miles from London.

MESSRS. EDWIN FOX & BOUSFIELD are favoured with instructions from the Directors of the Farnborough and Aldershot Freehold Land and Grand Event Society (limited) to SELL by AUCTION, at the QUEEN'S HOTEL, North Camp, Farnborough, on WEDNESDAY, OCTOBER 19th, at THREE precisely, a valuable and important FREEHOLD ESTATE, comprising a beautiful Close of Land, about fifty-five acres in extent, approached by capital roads, and within one mile of the Farnborough Station, on the South-Eastern Railway, and about the same distance from the Farnborough Station, on the South Western Railway. It is singularly favourable, both as an investment of a charming character, and entirely surrounded by a belt of beautifully-grown firs. These is a fine Site for a Mansion, whence views of great extent and beauty are obtained, and meadows slope gently to the Blackwater River; Nature has done much for the spot, judgment and taste are now only required in its development.—May be viewed, and particulars had of Messrs. PATTESON & CORBOLD, Solicitors, 17 and 18, New Bridge-street, Blackfriars; of Mr. EDWARD CHATFIELD, Managing Director of the Society, 17, New Bridge-street; of Mr. HENRY CURREY, Surveyor, 8, Lancaster-place, Strand; and of Messrs. EDWIN FOX & BOUSFIELD, 41, Coleman-street.

ALDERSHOTT AND FARNBOROUGH.—Valuable Freehold Property, comprising a well-accustomed Public House, and eligible Building Land

MESSRS. EDWIN FOX & BOUSFIELD are instructed to SELL by AUCTION, at the QUEEN'S HOTEL, North Camp, Farnborough, on WEDNESDAY, OCTOBER 19th, at THREE in the afternoon, in 3 Lots, the FREEHOLD of the CRIMEA TAVERN, and two acres of valuable Freehold Building Land, situate in the South Camp, Aldershot, close to the Permanent Barracks; two plots of Freehold Building Land, in the centre of the village of Cove, near to the Farnborough Railway Station, on which a well-accustomed beer-house stood, but which has been recently destroyed by fire.—May be viewed, and particulars had of Messrs. PRICKETT & KING, Solicitors, Basingstoke; at the Queen's Hotel, North Camp; at the Crimea Tavern, South Camp; at the Swan, Farnborough road; and of Messrs. EDWIN FOX & BOUSFIELD, 41, Coleman street, Bank, London.

BERKSHIRE.—Building Land, opposite to the Wellington College and close to the Railway Station, with important frontage, for the erection of Villas or Private Residences.

MR. ROBINS having disposed of the first portion of the estate, is instructed to SELL by AUCTION, at GARRAWAY'S, CHANGE-ALLEY, CORNHILL, Change-alley, Cornhill, on FRIDAY next, at TWELVE for ONE o'clock precisely, or more lots, unless an acceptable offer be previously made by private contract, FREEHOLD BUILDING LAND: comprising about 14 acres, lying unusually compact, and forming the most valuable south frontage, for the erection of villas, immediately opposite the Wellington College, adjoining the railway station, about three miles from the market town of Wokingham. The land offers great attraction to the directors of public institutions, requiring plots of 20 acres, and to builders, lying high, gently rising from the south, the situation most desirable and healthy, adorned by timber, and having a luxuriant belt of plantations on the south side, the frontage extending to 3,000 feet, offering tempting sites for the erection of villas, which also now much required in this improving locality. There is brick earth on the estate, and a more attractive opportunity for building to advantage is not in the market.—Full particulars, with plans, may be had of Messrs. BOOTY & BOOTY, Solicitors, 1, Raymond-buildings, Gray's-inn, W.C.; at Garraway's; and at Mr. ROBINS'S Auction and Estate Offices No. 5, Waterloo-place, Pall-mall, S.W.

PURLEY, near Croydon, contiguous to the Caterham Junction Station, on the main line of the Brighton and South-Eastern Railways, about 14 miles from the South Croydon Terminus, and 12 miles from London, which is reached in half an hour by rail.

MESSRS. BLAKE will SELL by AUCTION, at the PARLEY LODGE INN, Purley, on THURSDAY, OCTOBER 13, at FOUR for FIVE o'clock, Twenty Valuable FREEHOLD BUILDING PLOTS, and Two Cottages, with Gardens, being a portion of the Parley Lodge Estate, the whole having capital frontages to the turnpike road, and to a new road through the estate. The land has a substratum of gravel and chalk, and is in a delightful rural and healthy situation. The proximity of the railway station, and ready means of conveyance to the metropolis, render the demand of a safe and sterling character for the carrying out of extensive building operations.—Particulars, with plans, may be had at the Greyhound Inn, Croydon; at Garraway's Coffee-house, Change-alley; of Messrs. WEST & KING, Solicitors, 3, Charlotte-row, Mansion House; and of Messrs. BLAKE, Croydon.

Valuable Building Materials.

MR. C. F. SMYRK will SELL by AUCTION, on the PREMISES, Meat-house, Stockwell-green, on MONDAY, OCTOBER 17, at TWELVE o'clock, the entire portion of the excellent MATERIALS, fittings, and fixtures, of the above mansion, taken down, cleaned, assorted, and put into convenient lots, to suit the trade or builders: comprising 35 squares of flooring, 1,200 feet fine ash paving slabs, coping, and steps, 12,000 feet of prime sound Dutch yellow lathes, flooring, long rafters, joists, rafters, plates, &c., other scantling, doors, sashes, and frames, wainscoting, dressers and shelves, stove, stacks of firewood, sculptured marble fittings of a dairy, and an infinite variety of other sound materials, fittings, and timber.—On view till sale.—Catalogues on the Premises, two days prior, and at the Auctioneer's Offices, 25, Bucklersbury, City, E.C.

PIMLICO.—To Builders, Dealers in Materials, Lead Merchants, and Others.—Important Sale of Building Materials.

MR. GEORGE HAINES announces for SALE by AUCTION, on the PREMISES, on WEDNESDAY, OCTOBER 12th, at TWELVE o'clock, all the valuable MATERIALS of the Wine-stained Wine Vaults, three large Houses not being, in Back Buildings, the corner of Lower Grosvenor-place: comprising thousands of prime stock bricks, several tons of lead, countless slates and tiles, strong timbers in the roofs, French and other sashes, doors, prime bullet floats, stout slabs, marble chimney pieces, four large plate-glass shop fronts, complete water-closets, the usual fittings of the mansion-house, portico entrance, and fixtures.—May be viewed; catalogues of Messrs. HAINES & SON, Auctioneers, Moorgate street; and at the Auctioneer's Offices, Gravel-or-street West, Eaton-square, and 13, High-street Kensington.

10,000 Pieces of French and English paperhangings, in immense variety; 170 statuary, fawn, Sicilian, rouge-royal, Garibaldi, gray, black, black and gold, &c. Adam's dove and other Marbles, and enamelled Slate Chimneypieces; three stoves, a few good watercloosets, and other items. Surplus stocks of several eminent firms now sold for convenience of sale

MR. EDWIN WHITE will SELL by AUCTION, without reserve, at his ROOMS, 24, Holborn-bars, and 1, Castle-street, Holborn-hill, on TUESDAY next, at ONE for TWO o'clock precisely, PAPERHANGINGS CHIMNEYPIECES, GILT MOULDINGS, STOVES, WATER CLOSETS &c.—On view Monday and morning of sale.—Catalogues this day.

NOTICE OF SALE at Camden Town, two days, MONDAY and TUESDAY, OCTOBER 17th and 18th, at ELEVEN for TWELVE; extensive STOCK of a BUILDER

MESSRS. LEREW will SELL by AUCTION, on the PREMISES, Camden-terrace, 2,000 planks, deals, battens, 400 feet range of 4ft. square, 200 squares flooring, 20,000 feet moulings, 7,000 feet wide pine, 10,000 feet quartering, 10,000 feet pencil cedar, 2,000 feet mahogany, large quantity dry cut stuff, 4 benches, doors, sash-lining, ladder, 4 sashes, paving for 200 pennys, 100 lots useful old materials, slate cistern, chimney pots, &c.—Auction Offices, Cardigan-street, Hampstead-road.

EPSOM, SURREY.—Freehold Building Ground in an elevated position, possessing 689 feet of good building frontage, and presenting a favourable opportunity for creating Freehold Ground-rents.

MR. BRAY is favoured with instructions to OFFER for SALE by AUCTION, at GARRAWAY'S, on TUESDAY, the 18th of OCTOBER, at TWELVE o'clock, either in one lot or in fourteen different lots, a valuable FREEHOLD ESTATE, consisting of 31 acres or thereabouts, which has recently been laid out for building purposes, and roads and sewers made at considerable expense. It presents most eligible sites for the erection of first-class villa residences; is within a few minutes' walk from the City and West-end Railway Stations at Epsom, and from its elevated position commands most extensive views of the surrounding country.—Particulars and conditions of sale, with a plan of the property, may be obtained of Mr. ANDREWS, Surveyor, Epsom; of Messrs. ANDREW, ATKINS, & IRVINE, Solicitors, 5, White Hart court, Lombard-street, E.C.; at Garraway's, E.C.; at the Inns in the vicinity; and at the Offices of the Auctioneer, 10A, King's road, Bedford row, W.C.

LEWISHAM and TONBRIDGE RAILWAY PLANT.—Messrs. Hawley, Turner, & Edes have instructed

MR. J. GOWER to SELL by AUCTION, at his REPOSITORY, Barbican, FRIDAY, OCTOBER 14, 1864, at ONE o'clock, 30 young powerful Cart or Van HORSES, some first class Harness, 30 one horse CARTS, Timber CARRIAGES, Pole Vans, mostly built for the contract, Thill and Chain Harness, Cliff-machine, Crabs, &c. of the Lewisham and Tonbridge line.—On view two days prior.

PADDINGTON.—Valuable Building Materials, Bristol gardens, Maida-hill, adjoining the canal.

MR. J. A. SMITH has received instructions from the Contractor, to SELL by AUCTION, on the PREMISES, as above, on TUESDAY, OCTOBER 11, 1864, following day, at TWELVE o'clock, about FIFTY LOADS of excellent MEMEL TIMBER, in rafters, joists, quartering, bressummers, and girders; 5,000 feet run of yellow joists in 26 feet lengths; twenty-five squares flooring-boards; sixty 4 and 6 panel doors; 100 sashes and frames, two capital shop-fronts, with iron supports; fifteen squares of York paving, Portland stone, cills and copings; 10,000 plain and pan tiles; fifty register and other stoves, iron columns, wrought and cast-iron; sixty fathoms of excellent firewood, in large stacks; the whole to be sold without any reserve whatever, and to be cleared with a two days.—May be viewed, catalogues had on the Premises, and of the Auctioneer, 28 and 30, King street East, Hammersmith, W.

FOR SALE BY PUBLIC AUCTION, IN THE SALE ROOM

F. K. BARNES & SONS, Brokers.

Canons' Marsh, Bristol, October 8th, 1864

SUNNINGDALE, BERKS.—A very valuable Freehold Estate, comprising about 18 Acres of Building Land, arranged in convenient plots for the erection of first-class private residences

MESSRS. DRIVER & CO. have received instructions to SELL by AUCTION, at the GUILDHALL COFFEE HOUSE, London, on MONDAY, OCTOBER 31, at ONE o'clock precisely, in Eighteen Lots, some very valuable and desirable FREEHOLD BUILDING LAND, containing, together, about 18 Acres, situate at Sunningdale, only about 45 miles from Staines and Egham, within a few minutes' walk of the Sunningdale Railway Station (which adjoins the estate), and is within an hour's ride of London. The lots are well timbered, beautifully undulated, and embellished with ornamental plantations, commanding from every point various and extensive views of the surrounding scenery, so justly celebrated for its picturesque and lovely character. Its close proximity to Virginia-water, Wick or Great Park and Forest, Swinley Forest, Ascot Racecourse, and the great diversity of walks and drives in the immediate neighbourhood, render this property unrivalled in its suitability for the erection of first-class villa residences. The drive to Windsor is between five and six miles through the parks by a direct route, and is one of the most wooded scenery in the kingdom. The dry and healthy nature of the soil and air, the facilities afforded by the existence of good railroads to all objects of attraction in the vicinity, its proximity to London, the advantages secured to constant travellers by a reduction of the present rate of season tickets, and the advantageous manner in which it is proposed to lay out the new roads over the estate, afford peculiar advantages for building purposes. It is intended to form a new road through the property, commencing at the angle of the main road, near which stands the entrance lodge and gates of Sir Charles Crossley's estate, and which property immediately adjoins the Sunningdale and Bells Yew domains. Printed part culars, with plan, are in course of preparation, and may be shortly had. In the mean time, further information may be obtained of Messrs. ESCRITT & LUCAS, 19, Lombard-street, E.C.; of Messrs. JANSON, COBB, & PEARSON, Solicitors, No. 4, Basinghall-street, E.C.; and of Messrs. DRIVER & CO. Surveyors, Land Agents, and Auctioneers, 4, Whitehall, London, S.W.

[For remainder of Auctions see p. ix.]

London:—Printed by CHARLES WYMAN, Printer, at the Printing-office of Cox & Wyman, Nos. 74 and 75, Great Queen-street, Lincoln's-Inn-fields, in the Parish of St. Giles-in-the-Fields, and published by the said CHARLES WYMAN, at the Office of "THE BUILDER," No. 1, York-street, in the Parish of St. Paul, Covent-garden, both in the County of Middlesex.—Saturday, October 8, 1864.

NOTICE.

BROWN & GREEN'S KITCHEN RANGE

WAREHOUSE is now REMOVED to the NEW PREMISES, 72–74, Bishopsgate-street Within, a few doors from the late Address, at No. 81. The enlarged accommodation for a still larger stock of their Patent Prize Medal Ranges and Stoves, Cooking Utensils, &c. to meet the great public demand; and also for the consequent more extensive execution of all descriptions of hot water, bath, laundry, and steam work.

72–74, Bishopsgate street Within.

COMPETITIONS.

CITY of COVENTRY.—MARKET

HOUSE To ARCHITECTS.—The Corporation of Coventry invite DESIGNS, PLANS, SECTIONS, ELEVATIONS, SPECIFICATIONS, and ESTIMATES for the ERECTION of a MARKET HOUSE. The Plans to be of a uniform scale of 8 feet to an inch. The cost of the entire Building, with fittings, not to exceed 6,000l. The architect whose design, in the opinion of the Council of the said City, proves the best Design, &c. to receive 50l.; the second best, 40l.; and the third best, 20l. The Designs, &c. for which premiums are awarded to become the property of the Corporation, and the architect of the Design taking the first premium to supply the Corporation with Working Drawings, if required, according to the same scale as above, with the premium will amount to 5 per cent. on the cost. The Corporation will not bind themselves to employ the architect in carrying out his designs, or to carry them out at all, and if the premium should not, in the opinion of the Council, be of sufficient merit, the premium will not be awarded, nor will they be awarded unless the Council should be satisfied that the same can be executed within the estimate. Each set of designs, &c. must be distinguished by a motto, accompanied with a sealed letter containing the name and address of the competitor, and bearing a similar motto to that on the designs, &c. which envelopes will not be opened until after the plans are decided upon. The designs, &c. must be enclosed in a sealed cover, endorsed "Plan for Coventry Market-house," and addressed to THOMAS BROWETT, Town Clerk, Coventry, and delivered in or before the 23rd day of NOVEMBER next. A block plan of the site, with approaches, levels, statement of conveniences required, and of the conditions to be observed by competitors, can be had on application personally, or by letter, to JOSEPH CREASORICK, City Surveyor, St. Mary's Hall, Coventry.

THOMAS BROWETT, Town Clerk.

Coventry, September 28, 1864

CONTRACTS.

TO BUILDERS and IRONFOUNDERS.—

NEW TOWN HALL, TODMORDEN.—CONTRACTS are required for the EXCAVATING and BUILDING of the BASEMENT STORY for the above. The plans, specifications, and quantities can be seen at the Office of the Town Clerk, Rochdale; of the Office of Mr. W. H. HOLGATE, the Architect, New Cloth Exchange, Leeds, on and after the 17th inst. Tenders to be sent in, addressed to the Town Clerk, Rochdale, not later than MONDAY, the 24th of OCTOBER instant. The lowest Tender not necessarily accepted.

ZACH. MELLOR, Town Clerk.

Rochdale, 5th October, 1864.

CONTRACTS.

WAR DEPARTMENT CONTRACTS.—

NOTICE TO BUILDERS.

TENDERS are required for the SUPPLY of MATERIALS and LABOUR for War Department WORKS, at Aldershott Camp and Permanent Barracks, in the county of Hants including Repairs to the existing buildings, under a Triennial Contract, from the 1st January, 1865, to the 31st March, 1868, determinable at any period after one year, on either party giving to the other three months' notice in writing.

Copies of the schedules, for which the sum of six shillings and nine pence for each copy must be paid on issue, together with forms of Tenders, may be obtained on application at the Office

Although the said schedules include prices for work done, and for day labour, the Contractor will, as a general rule, be called upon only to supply materials.

The Tenders to be addressed, under cover, to the Director of Contracts, War Office, Pall Mall, London, S.W. endorsed, in the left-hand corner, "Tender for Works at Aldershott," on or before SATURDAY, the 5th NOVEMBER, 1864

The Secretary of State for War does not bind himself to accept the lowest or any of the Tenders

Royal Engineer Office, Aldershott,
14th September, 1864.

BLACKFRIARS BRIDGE. — TENDERS

will be received for the OLD STONE of this Bridge, consisting of Portland, granite in blocks and in steps, Kyle, Portland, and rough rubble. Also for the headstone coins, with moulded bases and curved caps. Apply to Messrs. THORN & CO Contractors, on the Bridge.

TOTTENHAM LOCAL BOARD of

HEALTH.—To ROAD-MAKERS and OTHERS.—Notice is hereby given, that the Tottenham Local Board of Health intend entering into a CONTRACT for RE-FORMING, LEVELLING, GRAVELLING and MAKING GOOD certain LOADS on the Finsbury Freehold Land Society's Estate, Wood Green, Tottenham, according to the terms of the specification and schedule of quantities, which may be seen at the Offices of the Board, on and after MONDAY, the 10th day of OCTOBER current. Copies of the specification and form of Tender, one given to each intended Tenderer, endorsed "Tenders for Roads, Finsbury Estate," must be delivered at the Offices of the Board, High Cross, Tottenham, between TEN and FOUR, on or before FRIDAY the 21st inst. But the Local Board do not bind themselves to accept the lowest or any Tender; and the party whose Tender shall be accepted will be required to provide approved sureties for the payment of half the contract for the due and satisfactory performance of the works

High Cross, Tottenham, October 6, 1864.

PARISH of CHELSEA, in the COUNTY of

MIDDLESEX.—FLINTS.—The Vestry of the Parish will meet at the Vestry Hall, King's-road, Chelsea, on TUESDAY, the 18th day of OCTOBER instant, at THREE o'clock in the afternoon precisely, to receive TENDERS from persons willing to contract, and the 28th day of September, 1865, for the SUPPLY of the BEST CLEAN GREY BROKEN FIT ROAD FLINTS, according to a sample, to be seen here, to be delivered at the Vestry depot, in Alpha-place, Manor-street, at such times and in such quantities as may be directed. The Vestry do not bind themselves to accept the lowest or any Tender. The Flints will be measured at the said depot by an officer of the Vestry. Sealed Tenders, signed by the proposed contractor, with the numerical description of the said contract, the terms of the performance of the contract, to be delivered to the Clerk by or before TWELVE o'clock on TUESDAY, the said 18th day of OCTOBER. No Tender will be received or accepted unless made on one of the printed forms to be obtained at my Office. By order,

CHARLES LAHEE, Vestry Clerk.

Vestry Hall, King's-road, Chelsea, 6th October 1864

HALIFAX CORPORATION WATER-

WORKS.—WORKS in the LUDDENDEN VALLEY.—To CONTRACTORS. The Corporation of Halifax are ready to receive TENDERS for the CONSTRUCTION of the WORKS included in the following CONTRACTS:—

No. 4, of CASTLE CARR CONTRACT, comprising the formation of three Reservoirs, a Gauge Basin, and the Weirs, Watercourses, Roads, and other works connected therewith. The Reservoir Embankments are 27 feet, 74 feet, and 80 feet in height respectively, and the gross cubic contents will be about 350,000 cubic yards.

The plans, sections, and drawings may be seen, and specifications and forms of Tender obtained, at the Town Hall, Halifax, and at the Offices of the Engineer, J. F. BATEMAN, Esq. No. 9, Great George-street, Westminster, and 3, St. Ann's-place, Manchester, and 19, Great George-street, Westminster, on and after MONDAY, the 3rd OCTOBER. Sealed Tenders must be addressed to, and left with, JAMES LUPTON NORRIS, Esq. Town Clerk, Halifax, on or before MONDAY, the 24th OCTOBER, 1864, indorsed with the name of the particular Contract for which it is a Tender. The Corporation do not bind themselves to accept the lowest or any Tender, nor will they if they see fit, let the whole work in one or in more contracts or contracts.

N.B. No 3 Contract is withdrawn.

By order,
J. E. NORRIS, Town Clerk.

Town-hall, September 28th, 1864.

NORTH EASTERN RAILWAY.—DARLINGTON SECTION. To BUILDERS.—TENDERS are invited for the ERECTION of a PASSENGER STATION, at the Eaton Junction. Plans and specifications may be seen at the ARCHITECT'S OFFICE, Northgate, Darlington, from MONDAY, OCTOBER 17th, to SATURDAY, OCTOBER 29th, 1864. Tenders to be delivered at the Company's Office, in Darlington, not later than MONDAY, OCTOBER 31st, 1864, addressed to the Secretary, and endorsed "Tender for Works." No pledge given that the lowest or any Tender will be accepted.—Signed

THOMAS MACNAY, Secretary.

Darlington, October 12, 1864

TO BUILDERS.—Persons desirous to

CONTRACT for the ERECTION of 3 ARCHES and 10 PIERS, at Messrs. Foort & Sons' Brewery, Stratford on Avon, can inspect the plans and specification at the Office of Mr ALLEN, Architect, Stratford on Avon, on and after FRIDAY, OCTOBER 21st. Tenders to be sent to Messrs. FLOWER & SONS, not later than TUESDAY, NOVEMBER 1st.

[For remainder of Contracts see next Page.

RUGBY WATER WORKS.—To ENGINEERS and CONTRACTORS.—The Local Board of Health, Rugby, are desirous of receiving TENDERS for the EXECUTION of the undermentioned WORKS, consisting of—

CONTRACT No. 1.—The Construction of an Engine house, a Reservoir, Filter, and Filtered Water Tank; also laying about 2,250 yards of 7-inch Cast-iron Pipes, with bends, and sundry other pipes.

CONTRACT No. 2.—A Grasshopper Engine capable of raising 200 gallons of water per minute to a height of 200 feet through the 7-inch Pipes, and of Force-throw Pumps; also a Patent Centrifugal Pump, with its engines, boiler, pipes, and cocks.

CONTRACT No. 3.—Supplying about 2,700 yards of 7-inch Cast-iron Socket-pipe with bends, and sundry other pipes.

Plans, specifications, and forms of Tender may be seen at the Office of the Local Board of Health, Rugby, between the hours of TEN a.m. and FOUR p.m.; or at the Offices of Messrs. EASTON, AMOS, & SONS, Engineers, Great Smith-street, Westminster, on and after the 11th instant. Tenders may be given for any one or all of the Contracts; but in the latter case, the separate amount for each Contract is to be stated; and the price for the pipes is to be per lineal yard. The Contractor will be required, at his own expense, to enter into a bond with two sufficient sureties or to pay for their expense, for the proper performance of the Contract. Sealed Tenders, indorsed "Tender for Water Works," and specifying the number of the Contract to which it refers, must be sent in to me, at the Office of the Local Board, in Rugby, on or before the 11th day of NOVEMBER next, after which time no Tender can be received. The Local Board do not bind themselves to accept the lowest or any Tender.—By order,

THEODORE M. WRATISLAW, Clerk.

Rugby, 8th October, 1864.

LONDON, BRIGHTON, and SOUTH-COAST RAILWAY.—SOUTH LONDON EXTENSION.—To ENGINEERS and IRON FOUNDERS.—CONTRACT for WROUGHT-IRON GIRDER BRIDGES.—The Directors of the London, Brighton, and South Coast Railway Company are ready to receive TENDERS for SUPPLYING and FIXING the WROUGHT IRON WORK (about 100 tons) in 4 other Works, on the Girder Bridges on the South London Extension Railway. Drawings and specifications may be seen, and the quantities and other particulars obtained, on and after MONDAY, the 17th instant, at the Office of Mr. FRED. DALE BANNER, Chief Engineer's Engineer. Tenders, in the prescribed form only, addressed to the Secretary, not to be delivered at his Office not later than ELEVEN o'clock in the forenoon of TUESDAY, the 25th instant. The Directors will not be bound to accept the lowest or any Tender. FREDERICK SLIGHT, Secretary.

London Bridge Terminus, October 10, 1864.

TO BUILDERS.—The Committee for Building a CONGREGATIONAL CHAPEL at Uckfield, in the County of Sussex, are prepared to receive TENDERS for its ERECTION. The plans and specifications may be seen at the residence of Mr. SAMUEL EVERSHED, Uckfield, to whose address Tenders are to be sent, on or before SATURDAY, the 22nd instant. The Paving and other internal fittings will not be included in the first contract. The Committee do not bind themselves to accept the lowest or any Tender.—Tracings of the drawings and a copy of the specification may be seen at the Office of the Architects, Messrs. J. L. & C. PARSONS, Lewes.—October 7, 1864.

RIPON WATERWORKS. — The Local Board are prepared to receive TENDERS, from competent persons, for the SUPPLY of CAST-IRON SOCKET PIPES, and Appendages, for the proposed new Waterworks for this district.—Copies of the specifications, with forms of Tender, and probable quantities required, may be obtained on application to Messrs. STEVENSON & UTLEY, Engineers, Halifax; and Tenders (sealed, and marked on the outside "Waterworks: Tender for Pipes") must be sent in to me, at my Offices in Ripon, on or before TUESDAY, the 25th day of OCTOBER instant.

R. M. NICHOLSON, Town Clerk,
Ripon, 6th October, 1864 and Clerk to the Local Board.

RIPON WATERWORKS. — The Local Board are prepared to receive TENDERS from competent persons for the supply of SLUICE-COCKS and HYDRANTS for the proposed new Waterworks of their district. Further information and forms of Tender, with probable quantities required, may be obtained from Messrs. STEVENSON & UTLEY, Engineers, Halifax; and Tenders sealed and marked on the outside "Waterworks.—Tender for Sluice-cocks, &c.") must be sent in to me at my Offices in Ripon on or before FRIDAY, the 28th day of OCTOBER instant.

R. W. NICHOLSON, Town Clerk
Ripon, 11th October, 1864. and Clerk to the Local Board.

TO BUILDERS. — NEW CHURCH in CHRIST CHURCH DISTRICT, LEICESTER.—Any Builders desirous to TENDER for building the above CHURCH, are requested to apply to the Architect, Mr. G. G. SCOTT, R.A. 20, Spring-gardens London, S.W.; or to the Rev. Canon FAY, New-walk, Leicester, on or before THURSDAY, OCTOBER 20th, respecting the conditions of the competition, and the time of sending in their respective Tenders.

Leicester, October 1, 1864.

TO BUILDERS.—Persons desirous of TENDERING for the ERECTION of a SMALL COTTAGE RESIDENCE at Worthing, Sussex, for E. J. Morgan, Esq., of Kenton, Middlesex, may inspect the plans and specification at the Office of Messrs. HIDE & PATCHING, Architects and Surveyors, High-street, Worthing, on and after MONDAY, the 17th instant. Tenders to be sent in on and after the 24th instant. No pledge is given that the lowest or any Tender will be accepted.

Worthing, Oct 12 h, 1864.

OLD SAINT PANCRAS ROAD, LONDON, N.W.

APPROVAL OF THE ROYAL VETERINARY COLLEGE.

THE MEDALS OF ENGLAND AND FRANCE,

And the Medals and High Recommendation of the Royal Agricultural Societies of England and Ireland.

SECURED BY EIGHT SEPARATE PATENTS. LATEST, 1863.

PATENT WROUGHT-IRON STABLE FITTINGS

SHOULD BE ADOPTED FOR THE FOLLOWING REASONS, viz.:—

That the BREAKAGES in Cast-Iron Fittings are numerous, and that one fracture from a kick or other cause, may occasion an injury to a Horse, and involve a loss equal to the entire expense of fitting up the Stable. The fear of this has led to the use of wood, and, in the case of Cast-Iron GUTTERS, to the adoption of another and less effective mode of draining.

PATENT ENAMELLED TOP PLATE MANGER, with RACK & WATER-TROUGH,

The whole of which, except the Rack, being enamelled, can be kept as clean as a DINNER PLATE.

THE HALTER BALL, ATTACHED BY A NEW IMPROVEMENT, WORKS NOISELESSLY, AND ALMOST WITHOUT FRICTION.

PATENT FASTENINGS FOR THE DOORS OF LOOSE BOXES.

These Catches and Hangings work easily, are self-acting, and cannot be put out of order: by their use all projections by which horses are often blemished are rendered impossible,—advantages peculiarly their own.

THE PATENT HARNESS FITTINGS

Keep the Harness and Saddles in shape, and are constructed so as to admit the air getting to the underside of them when hung up, thereby insuring a quick and perfect airing from any wet or moisture.

EVERY DESCRIPTION OF STABLE FURNITURE.

FIRE-PROOF CONSTRUCTION.—

FOX & BARRETT'S PATENT.

This improved system of fire proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private. The system combines ECONOMY with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete, so constructed that each floor becomes in effect a beam of artificial stone with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon the principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the Patent,

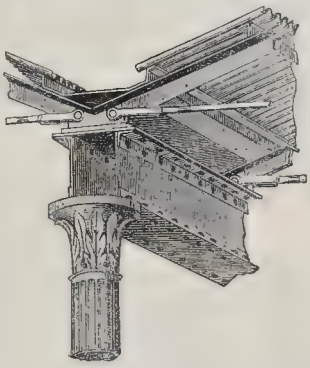
As presenting the MOST EFFECTIVE MEANS of OBTAINING SECURITY from LIGHTNING. They are economical, easily fixed, and APPLICABLE TO SHIPS and TO ALL BUILDINGS, including Private Houses, Churches, Chimney-Shafts, Dairies, Powder Magazines, &c. &c.
Price Lists and Estimates on application.
HART & SON,
WHOLESALE & MANUFACTURING IRONMONGERS
53 to 58, WYCH STREET, STRAND,
LONDON, W.C.

THE IMPROVED OPEN FIRE KITCHENER,
Manufactured by
WM. OWEN,
PHŒNIX IRON WORKS,
ROTHERHAM,

Possesses all the advantages of the ordinary Close Fire Kitchener, in having excellent Hot Plates on top of Ovens, for boiling, steaming, or stewing, with the additional advantage of having a thoroughly effective and deep OPEN FIRE for roasting purposes.
The Ovens are heated upon Bradley's Patent Principle (under which W. O. possesses the sole right to manufacture), and by which a great economy of fuel is effected.
These Kitcheners are made of all qualities and sizes, suitable for all classes of houses, from the cottage to the mansion; and can be OBTAINED THROUGH ANY IRONMONGER in the UNITED KINGDOM.

WM. OWEN,
GENERAL IRONFOUNDER, STOVE GRATE AND FENDER MANUFACTURER,
PHŒNIX WORKS, ROTHERHAM.

HENRY DOULTON & CO.'S
PATENT COMBINED SMOKE AND AIR FLUES.
BY THIS INVENTION PERFECT DRAUGHT AND COMPLETE VENTILATION CAN BE SECURED.



THE air-flue follows the line of the smoke-flue, the passages being quite distinct. The heat from the smoke-flue causes a current, which carries off the vitiated air admitted by junctions near the ceiling. The pipes or blocks are *all made to bond with ordinary brickwork.*

Where the blocks come together, each air-flue has a lip or projection, which enters the next block and completely shuts off the air-flue from the smoke-flue at the joint. This lip, with dowels at the opposite corners of the blocks, also holds the lengths firmly together.

Curves are made to suit any inclination.

Manufactured in Terra Cotta for smoke-flues equal to 12 in. 10 in. and 8 in. diameter, with ventilating-flues of proportionate size.

Small models will be forwarded to architects on application to
Henry Doulton & Co. High-street, Lambeth.

THE
TIVIDALE COMPANY

SKETCHLEY'S

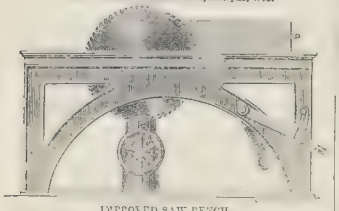
IMPROVED SAWING, PLANING, MOULDING, TENONING, RE-SAWING and GROOVING MACHINE.

Will do more work, and in a better and better than any other yet produced. Full particulars on application to the Inventor, CHEAT STREET, WEYMOUTH.

IMPROVED BAND SAW MACHINE.

SAMUEL WORSSAM & CO. invite all those who are contemplating the Erection of Sawing Machinery, to apply for a Copy of their New Priced Illustrated Catalogue of BAND SAW MACHINES, just published, which contains illustrations and descriptions of upwards of Fifty New Machines, designed for the best of work; also of a Great Labour-Saving Patent Pre-ach Saw Frame, of which W. & Co. are the sole proprietors.

These Machines may be seen at the Manufactory, 37, S.W. & Co's Works, 20, Kings road, Chelsea, S.W.



PRIZE MEDAL, LONDON, 1862.

THOMAS ROBINSON & SON,

SAW-MILL ENGINEERS,

ROCHDALE NEAR MANCHESTER.

London Office, 2, Adam street, Adelphi, W.C.

IMPROVED SAW BENCH,

for Sawing, Tongueing, Grooving, Rebating, Planing, and Cross-cutting Match Boards, Sawing Deals, Battens, and Wood Mouldings. Machinery of every description suitable for Builders, Contractors, &c. Steam Engines, Boilers, Shafting, Gearing, &c.

Full sets of Wood working Machinery to be seen in operation daily at the Works, Rochdale.

TO BUILDERS, CONTRACTORS, &c.

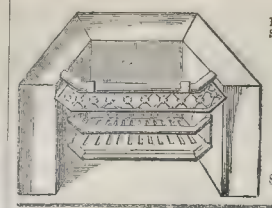
WOOD-CUTTING MACHINERY. Improved Self-acting Circular Sawing, Planing, Moulding, Circular Moulding, Tenoning, Lever and Foot Mortising, Sweep Sawing, Boring, Grooving, Tonguing, Hollowing, and Portable Hand-power Machinery. Apply for Illustrations to THOMAS LADYMAN, Rochdale, near Manchester.

THE PATENT UNIVERSAL CHIMNEY HEAD.

This Chimney Head has been designed for the Prevention of Smoke, the inventor and Patentee being fully convinced that the principle on which it is constructed is the only one that will effectually prevent smoke entering the rooms, from whatever cause it may arise. The same apparatus is equally effective in the cure of smoky chimneys, by its sticking backwards from the wind, and thus entirely doing away with the danger of the wind forcing down the chimney.

Price in Zinc..... 22s.
Ditto, Kitchen size..... 28s.
Price in Galvanized Iron 25s.
Ditto, Kitchen size..... 35s.

A Liberal Allowance to the Trade.



Manufactured solely by

BENHAM & FROUD,

GENERAL METAL WORKERS,

4, Hanover Chapel street, Regent street, London, W.C.

And to be obtained of leading Ironmongers throughout England and Country.

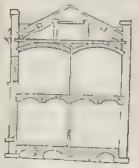
EDWARDS & SON,

STOVE, GRATE & KITCHEN RANGE MANUFACTURERS,

No. 49, GREAT MARLBOROUGH STREET, REGENT STREET, LONDON.

EXHIBITION PRIZE MEDAL, 1862, AND MEDAL OF ROYAL AGRICULTURAL SOCIETIES OF ENGLAND AND IRELAND.



MUSGRAVE'S PATENT STABLE AND HARNESS FITTINGS.

MUSGRAVE'S PATENT HARMLESS LOOSE BOXES, MUSGRAVE'S PATENT IRON COW-STALLS AND PIGGERIES.

Architects who have not seen these Fittings are requested to write for Engravings, as they are unlike those of any other maker, and were adopted to extend the work of their kind. They can be seen in direct use in almost every county in England and MUSGRAVE, BROTHERS, are now fitting several very large establishments on new directions of London Architects, noted for adopting only what is the best of its kind. Particulars of these, as well as of MUSGRAVE'S PATENT SLOW-COMBUSTION STOVE, will be forwarded on application to

MUSGRAVE, BROTHERS, ANN STREET IRON WORKS, BELFAST.

THE DENNETT ARCH.

Allowed to be the cheapest fireproof construction known, and used with the greatest success for the last ten years in the Midland Counties, and has been adopted by G. G. Scott, esq. for the New Foreign Offices, to span any form of arch, groin or dome; turned to any length, width, or height, forming a perfect floor and ceiling in one mass, from 2½ inches in the crown to any required thickness.

Address to the Patentees, England and Canada,

A. & R. DENNETT & CO. NOTTINGHAM.

TESTIMONIAL.—"I have made use of Messrs. Dennett & Co.'s material for Fireproof Arching, and though I have, happily, had no practical experience of its efficiency as against fire, I can bear witness to its strength, and to the ease and economy of application. I have made use of it in positions in which I should have found it difficult to introduce any other fireproof material, and it has this advantage, that the arches constructed of it are set entirely on one mass that they cover the space like a compact shell or inverted basin, and are, consequently, almost wholly free from lateral pressure.

"GEO. GILBERT SCOTT, 20, Spring Gardens, London."

BROWN & GREEN'S PATENT KITCHEN RANGES.

PRIZE MEDAL, 1862.

These Ranges combine the latest improvements with great simplicity and durability. They afford facility for roasting meat in front of the fire without interruption to the action of the oven, hot plate, boiler, &c. The Ovens are well ventilated, and perfect either as roasters, or for baking bread or pastry. For Efficiency, Economy, and Ventilation, and

CURE OF SMOKY CHIMNEYS,

these Ranges are unequalled. They are of all sizes and prices; and when fitted with Bath and Steam Apparatus, &c. they form the most complete appliances for good establishments. Designs, &c. may be had on application at THE LONDON WAREHOUSE,

72-74, BISHOPSGATE STREET WITHIN.

"One of the best arrangements of the 'Kitchener.'"—See *Builder*, Sept. 6, 1862.

J. B. SCAMMELL & CO. (late Thomas Pugh & Co.)

WHOLESALE BUILDERS' IRONMONGERS,

PATENTEES AND PROPRIETORS OF THE

PATENT ECONOMIC SELF-ADJUSTING MORTISE AND RIM LOCK FURNITURE,

which does not require any screws in the necks of the knobs. Perfect action guaranteed in both Locks and Furniture if the Locks are of our own manufacture.

SOLE AGENTS FOR KIMBERLEY'S FLOOR CRAMPS, AND GREEN & JACKSON'S NEW PATENT MORTISING AND TENONING MACHINES.

A large Stock of Nails, Screws, Locks, Latches, Hinges, Pullies, Brass Goods Coffin Furniture, Glue, Bond Hoop, Stoves, Ranges, Rainwater Pipes, Gutters, and Connections. Castings of all kinds, Scaffold-rope, Crab Winches, Screw-jacks, Patent Wrought and Cast Iron Windows, Patent Iron Stable Fittings, either plain, galvanized, or enamelled.

All Goods at the lowest Wholesale Prices. Illustrations and particulars sent upon application.

No. 18, KING-STREET, SNOW-HILL LONDON, E.C.

"By Royal Letters Patent."

"Indicator" Dial, 2½ in. diameter.

ELECTRIC BELLS FOR DOMESTIC USE.

BREGUET'S PATENT INDICATOR SYSTEM, with a Dial which shows when the Bell is ringing, the same as in use at the Grand Hotel, Boulevard des Capucines, Jockey Club, &c. Paris.

The superiority of Electric Bells is already settled in America and in France. For all modern works at Paris they have as effectually superseded the old crank and pull plan as, for travelling, the railway has superseded the antiquated stage-coach.

ADAMS & SON have much pleasure in stating that they have made arrangements with Messrs. Breguet, of Paris, to become their sole Agents for the sale and fixing of their Patented Apparatus upon the "indicator system," which has great advantages over all others, and is especially adapted for hotels, public buildings, and other large establishments. The details of this ingenious instrument, together with a description of the various apparatus in use for Electric Bells, may be had upon application, or by post.

WILLIAM S. ADAMS & SON,

Ironmongers by appointment to the Queen and his Royal Highness the Prince of Wales, and also to the principal London Clubs,

Engineers and Manufacturers, 57, Haymarket, and 14, Norris-street, S.W.

London Orders Received at 27, Millbank Street, and 93, Cannon Street.

IMPORTANT TO ARCHITECTS, ENGINEERS, BUILDERS, RAILWAY, AND OTHER COMPANIES.

VIEILLE MONTAGNE ROOFING ZINC.

Company's General Agency, 12, Manchester Buildings, Westminster.

Zinc properly laid has been proved by most extensive and long experience in France, Belgium, and Germany to be a most secure, durable, and economical covering, and is now preferred to all other materials for roofs. Its extreme lightness makes it most valuable for covering buildings requiring large spans with comparatively light framing. On a rough calculation it may be estimated that not less than 41,000,000 square feet is the average quantity of Roofing surface now annually covered in the above countries alone. Within the last few years persevering efforts have been made to introduce into England proper workmanship, in accordance with the principles which are observed on the Continent, and which alone can secure the sound and perfect construction of a Zinc roof. To aid in extending as much as possible the knowledge of these simple rules, models showing all the details are to be seen in the Architectural Exhibition in Conduit-street, and the following, selected out of a very great number of recently constructed roofs, are referred to as examples:—The Patent Granary, West-India Docks; Copenhagen Works, Limehouse; a private house in Holland Park; Homes for Poor Merchants' Clerks, Muswell-hill; a large Warehouse, 77, Thames-street; Ship roof, Sheerness Dockyard; the Victoria Station, Pimlico; the Stations in the Metropolitan Railway; the Stations of the Madras Railway Company (400,000 feet); the Warehouse of Messrs. Oakes, Brothers, & Co. Madras (20,000 feet); the Refreshment Rooms at the Exhibition; the Verandah of the Horticultural Society's Conservatory; Gloucester Railway Station; Messrs. Horniman & Co.'s Tea Warehouse, Wormwood-street; Messrs. Hoare & Co.'s Brewery, Smithfield; Cape Town and Wellington Railway (60,000 feet); Fifty new Dwelling Houses at Palace Gardens-terrace, Kensington; Twenty ditto, Inverness-terrace, Bayswater.

Plans, Estimates, and all useful information will be furnished, without charge, by applying to either of the Directing Architects.

JAMES EDMESTON, 5, Crown-court, Old Broad-street.
R. G. FISHER, 12, Manchester-buildings, Westminster.

N.B. No covering can be more economical, durable, and secure than Zinc when well laid, but good Zinc badly laid will spoil the roof, and, with a view still further to encourage good work, a special Discount will be allowed to all persons upon the Zinc used in roofs, when certified by either of the above Architects to be properly laid.

THE LAND SECURITIES COMPANY (Limited).
Capital, 2,000,000l.
DIRECTORS
The Right Hon. the Lord Naas, M.P. President.
The Directors of the International Financial Society (Limited), acting as a Finance Committee.

MANUFACTORY and CITY SHOW ROOMS, 147, HOUNDSDITCH.

HUBBUCK'S PATENT WHITE ZINC PAINT.
By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.
ADULTERATIONS. Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Baryte from ten to thirty per cent. And are now selling under the name of "Improved Zinc Paint," or as the produce of Two or Three qualities, no workman can produce good work with such stuff. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.
CHEAPNESS.—Not only is it cheaper per lb. in bulk weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as a ton hundred weight of white-lead and leaden oil mixed.
EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."
THOMAS HUBBUCK & SON,
WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

GRESHAM LIFE ASSURANCE SOCIETY.

F. ALLAN CURTIS, Actuary and Secretary.

ROYAL POLYTECHNIC.—Patron H.R.H. the Prince of WALES.—Re-decorated and Re-opened.—Daily at 1 and quarter to 8 (except on Wednesday Night). Professor Pepper's new Lecture "On Sound and Acoustic Illusions," which will include an imitation of the Talking Head of Albertus Magnus, Professor Wheatstone's Telephonic Concert, Mechanism of the Flying Ball trick, genuine Speaking Machines, Pepper's new and beautiful experiment, showing Harmony and Discord. The Ghost Illusion as usual (J. H. Pepper and Henry Dircks, joint inventors), by J. L. Kingsley. New Musical Entertainment by Mr. H. Cheshire, illustrating the story of "Sinbad the Sailor." Pepper's Ghost will perform daily, at 4.30 and 8.45, all three different variations on one string and with one hall in which the late Pepper's was so celebrated.—Open 12 to 5, and 7 to 10.

MEDIÆVAL PAPERHANGINGS, from the Thirteenth to the Sixteenth Centuries. Designed by G. T. ROBINSON, F.R.I.B.A. Manufactured by
WM. WOOLLAMS & CO. 110, HIGH STREET, near Manchester-square, London, W. May be obtained of the principal Decorators.

"Extracts from notices in the undermentioned publications:—
"Conventionalized patterns, often displaying great beauty of form, characterize the examples sent to us. With a few exceptions, the colouring of the specimens is commendable, in many it is worthy of the highest praise."—*Athenæum.*
"The designs are exceedingly elegant, and the colours good and well arranged. Some of the patterns are of strictly ecclesiastical character, suitable for mission churches and oratories, or they may be used as accessories in church decoration."—*Church Builder.*
"The majority of the patterns are exceedingly satisfactory, and not expensive."—*Builder.*
"These designs are infinitely varied, yet always consistent and effective; the colouring is pre-eminently good, both in the selection of tints, and in harmonious combinations; and the quality of the paper is of the highest order."—*Art Journal.*

The Builder.

VOL. XXII.—No. 1132.

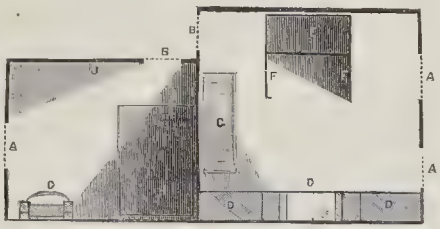
Air in the Corners.

THE writer of the paper on which the discussion on the evils of overcrowding and on its remedy was founded has reason to be satisfied with the attention that has since been given to the subject. The president of the department enforced and illustrated ably what had been said; and his remarks, as well as the paper referred to, have given a text for many articles in the public journals. There is no difference of opinion as to the extent of the evil both in town and country, and very little as to the necessity of further legislation for its prevention.

"Much as has been done by the mere spread of knowledge [writes the *Times*], Sir C. Hastings believes it to be necessary for the Legislature to interfere more decidedly than it has hitherto done. It is certain that many necessary measures cannot be carried out until a conviction has been aroused of the absolute duty of adopting them. There can, indeed, be no question that health is wealth, and that the most careful sanitary precautions are economical in the end; but such a result is not often sufficiently apparent to enable us to trust to the operation of a mere sense of interest. If it is urged, not unnaturally, that an increased spread of knowledge will be sufficient to create this sense of duty, it must be acknowledged that a glaring proof exists of the extent to which prejudice and carelessness will neglect the most obvious precautions. Although it is notorious that small-pox might be almost driven from our tables of mortality by proper vaccination, it is still a prevalent and fatal disease in this country. There is some probability of a similar preventive being discovered for scarlatina; but, even if it should be, with such an example before us, there is reason to fear that the boon would be neglected or scouted for a long time by the mass of the people. But disease is an element with which a man has no more right to trifle than he has to play with fire. It is not his own concern, it is his neighbour's, and the Legislature is but discharging a public duty when it prevents a man or a petty township from risking the lives of the public by carelessness, prejudice, or obstinacy. A sense is certainly becoming more and more deeply rooted that there are few matters of more national concern than the sanitary condition of a country. The old adage that cleanliness is next to godliness, and that moral and physical well-being are indissolubly connected, is daily more and more acknowledged." To obtain that well-being, obedience to the physical laws laid down by the Creator is needed. The generalness of that obedience will, after all, depend principally upon the extent to which the knowledge of these laws is spread among Englishmen; and it is the greatest use of such meetings as the Social Science Congress to diffuse and enforce this knowledge: but, pending the spread of it, ignorance must be prevented from doing murder. From Scotland and Ireland, as well as from London, comes a similar response. Thus the *Buchan Observer*, commenting on the paper to which we have referred, writes,—"It is obvious that there would be difficulties in carrying out this proposed extension of the Lodging-Houses Act, but they are difficulties which could be overcome. If a house be perverted from its proper use; if the health of its inmates be systematically destroyed; if the well-being of the community among which it is placed, be endangered—and all this, and much more, might be said of over-crowding—then it becomes the duty of the Legislature to interfere, and make restrictions which shall be vigorously enforced. It is the constant complaint that the Lodging-Houses Act, though good in itself, does not go far enough—that, in fact, it fails to reach a class who are notoriously in need of its supervision. In Peterhead and other towns along the Scottish coast there are peculiar reasons for demanding its extension. Here, for instance, during the herring fishing, there is an addition to the population of some 3,000; the overcrowding is truly lamentable; physical and moral degradation are the direct and palpable results. Some power of inspection by the authorities would be of the utmost value, and this the Lodging-Houses Act fails to give. Many a town in Scotland would hail the extension which has been proposed, and we trust that those who have taken up the matter will not cease to agitate till its adoption by the Legislature has been secured."

A "Herts Vicar" adds a bundle of forcible facts to the already piled-up heap, and states what occurred in his own village. "I think," says he, "the real cause of the spread as well as the fatal effects of these diseases is to be found in the overcrowding of the dwellings of the poor. The natural consequence of such overcrowding is that the poor occupants are compelled, for several hours together, to breathe a most fœtid and unwholesome atmosphere, whereby it would seem the undeveloped frames of the young are rendered unable to cope with disease of more than ordinary violence, and which, in the case even of adults, would be most disastrous, were it not that they are invigorated by their occupation leading them to spend many hours in the open fields.

And such, in fact, is our own state. While the population has increased, house-room has not increased in the same proportion; so that not only have we in many instances two families occupying one cottage, but many of the cottages having but one bedroom; we have parents, grown-up sons and daughters, as well as young children, occupying the same apartment—an apartment, be it understood, in too many instances barely large enough for the healthful occupation of a fourth part of the number usually found sleeping in it, and with a window, perhaps, opening to the extent of 24 in. by 14 in. Well, therefore, might an intelligent labourer declare to me, that should he at any time have occasion to return to his bedroom before leaving home in the morning, after quitting it for a few minutes, he found the smell 'almost enough to knock him down.' It is, then, in this overcrowding that we must look for the cause of this fearful rate of mortality on the recurrence of epidemic disease."



As remedies the reverend writer urges "the adoption of a wise, well-ordered, and generous system of emigration, under the active superintendence and encouragement of the national Government; and giving greater facilities for cottage building, by spreading the poor-rate over a larger area, so that it may not fall so heavily as at present on those localities where a large number of poor are necessarily brought together."

As we have said again and again, the condition of even the most crowded houses in London might be immensely improved if the poor possessed a better knowledge of the simplest sanitary laws, and no greater boon can be conferred upon them than to spread such information. Let us contribute a mite or two more with that end in view.

When estimating the cubical contents of apartments which are occupied by large numbers of the working classes, no account is taken of the extent of space occupied by the various articles of furniture, which are often so closely packed that there is barely room to move. For instance, in one apartment about 10 ft. in length, 8 ft. in width, and about 8 ft. high, the whole contents about 640 ft., there was one of the old-fashioned press-bedsteads, which, when put up during the day time, was so filled with bedding, &c., that it was equivalent to a solid mass of the following dimensions,—length 6 ft.; width, 3 ft.; height, 5 ft. Here we have at once 90 ft. taken away from the limited space. On the top there were boxes of different kinds, and other articles, which took up a space of at least 40 ft. more. An upright eight-day clock, set in a corner, about 7 ft. high, 2 ft. in front, and more than 1 ft. in depth, occupied about 18 ft.; a large tool-chest, 5 ft. long, 3 ft. in height, and 2 ft. in width, occupied 30 ft.; a chest of drawers, 6 ft. in front, 2 ft. in width, and 5 ft. long, about 60 ft. There were also hampers, chairs, a sofa-bed, a table, and other things, which cannot be estimated at less than 60 ft. By these various articles nearly 300 cubic feet of space were occupied; and at night, and during a great part of the day, five and sometimes six persons occupied this small ill-ventilated room, which may be taken as a type of many hundred others. Supposing that the number of inmates was five, the substance of the bodies would occupy an additional amount of space; but, without taking this into account, there would only be a fair breathing-space left of something like 68 ft. for each person,—a poisonous and dangerous limitation.

The bulky, unwieldy, old-fashioned furniture being discarded from many well-conditioned houses, still, by means of the brokers, finds its way into houses of a poorer grade, where there is not so much accommodation for its reception. May we hint that it would be well to avoid it, and to purchase such articles as metal bedsteads, which do not occupy much space, and prevent the assemblage of troublesome visitors.

In spite of the sanitary teaching which has been so earnestly given in various ways, there still exists an amount of ignorance on the subject which causes great mischief. In the dwellings of the industrious and poorer classes, there are corners as fatal to health and life as some of those to which we have referred as existing in certain hospitals. Nor is this to

The Ventilation of Corners.

AAA. Windows. BB. Doors. CC. Fire-places. DD. Cupboards. E. Press bedstead. FF. Folding-doors of the bedstead when open. G. Sofa bedstead. H. Bedstead. I. A partition, without any opening. J. Spot to which the bed was removed.

be wondered at when we glance at the actual condition of things. The accompanying illustration gives an example. The apartments consist of two rooms of very limited dimensions, one of which is used as a bed-room, and the other both as a bed- and sitting-room. Each room is entered by a door on the landing of a dark and ill-ventilated staircase. In the bed-room there is a very small window, not more than 3 ft. square, with a fire-place which is but 2 ft. wide and 3 ft. high. This, as well as the window, is situate in the angle farthest from the door. From the door, running at right angles, is a partition between the front and the back room, without any opening, and the consequence is that there is in one corner an unwholesome stagnation of the air; and it is usually the case that the worst part of a room is chosen to put the bedstead in. In this case the pillow had been placed in the corner in which the least possible change of air takes place. These bad arrangements are of constant occurrence, and we are glad to find the matter is beginning to gain the attention of some of the most intelligent medical attendants of London. From one we learn that in a bed placed in an ill-ventilated part of a room, he found repeated cases of illness. It is true that there was a sufficient amount of overcrowding when the children were in bed to account for this of itself; but on the bedstead being removed to a position where the air could circulate between the door, window, and fire-place, health rapidly returned; and, notwithstanding the overcrowding continued, there was a marked improvement in the appearance of the children. Many other instances might be given to show that the sanitary advice of the doctor, when acted on, has had as much effect as physic.

In the larger room there is both more space and better means of ventilation, for there are two windows, the door, and the fire-place; and the latter being more in the centre of one side of the room, is more effective than in the other instance. Notwithstanding, there are unwholesome corners in this room, even when attention is paid to the opening of windows; on the side opposite the windows, and on the other side of the partition, where the worst air of the bed-room collects, the atmosphere gets vitiated, and those who inhale it for any length of time complain of prostration and a disinclination to attend to their usual pursuits. Moreover, the windows do not open at the top, so that the upper part of the room at night is full of bad air. To remedy the evil conditions of such apartments is easy, and the expense would be but a trifle; the placing of three or four zinc ventilators in the partition between the two rooms, at about a foot and a half from the roof, and altering the windows of each apartment so that they might be opened about a quarter of an inch at the top, would be the means of allowing the fresh air to drive the impure from the corners; but there is such an objection to what is wholesome that it might be well to introduce perforated glass in the top parts of the windows, to make sure of the proper results. It would also be of advantage to make some openings near the top of the doors. The writer some time since knew a zealous advocate for ventilation, who, in the absence of his family at the sea-side, made air-holes through the bed-room-doors of the house by means of pistol-shots: a small centre-bit would act more safely, while securing a useful purpose.

Happening to be in some rooms on the basement of a house where the ventilation was notoriously defective, we saw some little boys amusing themselves by firing off flashes of gunpowder, and noticed how curiously the dense grey smoke became deposited for a length of time in those parts where the ventilation had been most neglected. Just in the same way as would the heavy poisonous gases which generate typhus fever, but which are not visible to the eye, did the volumes of smoke become deposited in corners where the air did not play properly about. The effect was most distinct when the sunbeams came into the place, and it was remarkable how soon certain parts were cleared, both of smoke and of sulphurous smell, while in others the atmosphere continued loaded for ten minutes or a quarter of an hour. In closets it was difficult to move it, even by fanning. The effect of firing off the flashes of gunpowder one at a short time after another, was that the smoke accumulated in dense masses just where was at first betrayed the greatest want of ventilation; and in rooms which were better ventilated every part became more or less uniformly pervaded by the effect of those miniature explosions, which soon passed away. To make this experiment is not pleasant; but in cases where ladies are sceptics in sanitary matters, it would afford the advantage of giving them visible evidence. Even in new houses, halls, and staircases, the state of the ventilation might be usefully tested by means of sulphuretted smoke. In carrying out experiments of this kind, the cordial co-operation of the small boys might be depended on; and perhaps a lesson in this way might be learned that would be useful in after-life.

By means of a ring of finely constructed metallic mesh, fitted into a circular aperture prepared for it in glass, and used either with or without a cover, and with a valve into a flue, Mr. Boyle ventilates apartments very satisfactorily. The valve, formed with pieces of mica, is so delicately sensitive, that two degrees of increase of temperature of the air of a room over that of the outer atmosphere, are sufficient to bring it into efficient action. The inventor remarks,—

"Heat, in excess, is one of the conditions found usually accompanying a bad state of ventilation; and this very quality, which now forms a portion, and that the most palpable portion, of the evil in question, is utilized by this valve, in being the motive power which keeps it in operation, whereby it not only works itself off, but carries with it at the same time the deleterious carbonic acid, and the other injurious gases and vapours with which a vitiated atmosphere is known to be charged."

In one instance, under our own eyes, Mr. Boyle has operated very successfully.

We have before now spoken of the want of ventilation in cupboards. An examination of a few, particularly those in which provisions are kept, will at any time prove the correctness of the complaint. In moderate weather, butchers' meat put in seemingly fresh in the evening, is found perfectly putrid in the morning. Chlorides of various kinds have been used for the purpose of purifying cupboards, but without effect. One housewife takes the trouble to blow air through her cupboard two or three times a day; others have tried weekly lime-washing; but nothing will do any permanent good if the proper construction of such places be not attended to, so as to admit of change of air.

The press-bedstead in such rooms is almost as unsanitary as the cupboards. The canopy passes over at about 3 ft. from the heads of the occupants; and in order to prevent air from getting to the sleeper, the folding-doors, when the bed is let down, are usually set open at right angles.

These, it may be said, are small branches of the subject; but they are none the less important. We desire to make people think of what is needed and what may be done, and to connect cause and effect. Doing this, they will soon be brought to admit the necessity of further legislation to combat the giant evil of overcrowding.

MILITARY SURVEYING.

It is almost incredible that very few officers in her Majesty's army, Sandhurst and Woolwich men excepted, can make a survey or even read a plan; yet this is stated to be the fact by Capt. Lendy.* It is, indeed, avowedly to simplify the difficulties that have hitherto precluded the attainment of topographical skill by officers that the work we are about to notice was written. The author found that the first stumbling-block was the want of fixed rules to figure the ground. The beginner was frequently daunted by the varieties of horizontal style, vertical style, pencil-brush-work, &c., and completely repulsed by the mysteries of the plotting-book. To remove as many as possible of these impediments to the progress of the military student Captain Lendy has treated only of those practical operations that are needed in actual service; but it must be owned these are so various, and involve consequences of so much moment, that it is difficult to imagine how any officer is able to pass muster without having acquainted himself with the mode in which these indispensable operations are carried on.

Simple as a military sketch of a district may appear, it tells a very important tale. A little difference in the shading of a contour, not exceeding the sixtieth part of an inch in the thickness of the strokes with which it is shaded, tells the experienced eye whether or not it is too steep for infantry to move with order, or for artillery to fire up hill, or for cavalry to trot up or canter down. Hence the great importance of a uniform mode of indicating certain gradations. Captain Scott, the examiner of military drawing, to secure this desired uniformity of expression by different draughtsmen, has proposed a system that will probably be introduced both at Woolwich and Sandhurst. An objection to his scale for shading plans consists in the difficulty of employing it, or any other precise rule, in a hurried reconnoitre made within sight of the enemy; but he contends, that under the most adverse circumstances the sketches of a dozen draughtsmen, all taught to draw with reference to one scale, are more likely to approximate to one universal language than if they had pursued different modes of delineation from the beginning. Leaving the enemy out of the question for the present, uniformity is desirable on every score. The reconnoitring of a route through which a convoy will have to pass is a frequent task; and that this should be executed upon the same principles every time that it is done must be of importance.

It would be unfair not to acknowledge our obligations to the French in the matter of military engineering. French influence is seen in many of the names applied to different objects, and felt in still more numerous ways. The lines of routes, or *itinéraires*, sketched as illustrations to Captain Lendy's volume, are French; and the table of the different subjects to be examined in a *reconnoitre* is that adopted by the French staff. Reconnoitring consists of two parts,—the plan or sketch, and the report. An enumeration of the different objects to be observed in the latter will best serve to show the proficiency in noting and drawing conclusions from minute and comprehensive details acquired by *les ingénieurs* of France. First, the order in virtue of which the operation has been made must be transcribed and placed at the head of the report; then follow five classes of observations in the following order:—1. A physical description of the country, including the geographical position of the ground reconnoitred, its general configuration, aspect, and access; the basins in which the ground may lie, its orography, its hydrography, the configuration of the coast, the nature of the soil, the aerography, the meteorological facts, such as whether the district is liable to violent storms, &c.; the plants and animals peculiar to the climate; the race of men, of mammalia, reptiles, &c.; the tides and their peculiarities. 2. Statistics, or the political and administrative divisions of the ground reconnoitred; the population, with number of inhabitants per square mile, proportion of men fit for service in arms, &c.; the number of militia and yeomanry; the language, religions, degree of instruction of the different classes of people, the number and nature of public buildings, of houses, the resources for lodging troops, materials of construction employed in the country, statistics of towns and fortified places, state of the agriculture of the country; number, condition, and products of woods and forests; cattle, the local industries, local measures, commerce, and public revenue. 3. Communications, the general outline, land communications, routes of secondary order, railways, navigation, canals, boats, and amount of navigation in rivers and ports, means of passing rivers and canals, telegraphic lines. 4. Military consideration, the advantages offered for offensive and defensive operations, suitable positions for a *corps d'armée*, with full information respecting places from which provisions, forage, water, and wood, could be drawn. 5. The general history of the country in which the ground reconnoitred is situate, its archæology, or remains of Greek, Roman, and Christian epochs, and a summary of the military events that have been enacted upon the ground in question. This document, when completed, is signed by the officer compiling it, and forwarded with the plan or sketch to the proper quarter. It will be seen that a first-class military survey is no easy matter: it calls for a wide experience, extensive knowledge, and great activity and industry. It is curious that it is at all times difficult to collect the required information. At home, alarm is taken by the residents in the neighbourhood of a survey that some exaction, either in the form of an extended billet or tax, is about to be practised upon them; and abroad, every fact is suppressed that would be likely to invite the approach of armed forces, and every obstacle magnified that would be likely to deter it. Notwithstanding this tendency, it is usual to question guides, shepherds, carriers, as well

* "A Practical Course of Military Surveying, including the Principles of Topographical Drawing." By Captain Lendy, F.G.S., F.L.S., &c., Director of the Military College of Sunbury. London: Atchley & Co., Great Russell-street, Bedford-square, W.C. 1864.

as mayors and bailiffs, care being taken to avoid alarming them. A knowledge of foreign languages is, therefore, an important item in the education of a field officer. On entering a country occupied by the enemy, information may be gained by examining and cross-questioning spies, inhabitants, hunters, muleteers, &c., concerning the roads, defiles, woods, hills, rivers, marshes, bridges, &c. When collated, discrepancies point out inaccuracies that may be successively rectified. It is a more rapid process to rectify a sketch made from tolerably reliable information than to survey and reconnoitre ground that is wholly unknown. When a survey has to be made under the eye of the enemy, scantier details suffice: the officer trusts to his memory and concentrates his attention upon those points which are of the most importance, such as the direction and inclination of acclivities, the rivers, rivulets, and their embankments. These scanned, and the time noticed that it took to walk or gallop to the chief points, he plots the various objects, by traducing time into distance, on his return to camp.

Captain Lendy gives heart to those who may hereafter consult his pages, by affirming that nothing is impossible, especially in topography. When in the field without either time or means to make a regular survey, and plans are imperatively called for to determine the movements of troops or select positions for encampments, it becomes necessary for a staff-officer to make the required sketches without instruments, or with the aid only of such instruments as he can construct on the spot. The chief requisites are measures for distances and angles. For the first of these there are three expedients, the officer's own pace, or the trot of his horse, or his watch, for distance is tolerably accurately laid down by time; and for the second, if a prismatic compass on a sextant is not to be had, a substitute may be improvised. A cross-staff and clinometer are the work of but a few minutes. A pin fixed into a plane table serves as a sundial, and nothing more is needed but a sheet of paper, pencil, piece of indiarubber, and a penknife. The more skilful the officer is who may be driven to these expedients, the more will his sketch approximate to a plan made in the regular way. He will first select a base and form a canvas (the sort of network formed by the triangulation of the chief points of the surface). He will then fill in the details. The various objects on the ground are represented by conventional forms, such as crosses for churches, parallelograms for houses, a horseshoe on an oblong base for a smithy, cones for ironworks; and the nature of the soil, whether marshy, rocky, muddy, subject to inundations, or riddled with rabbit-holes, is indicated by recognized markings. There are upwards of ninety of these signs to be borne in remembrance. Colours, too, have fixed readings. Gravel is rendered by dots of sienna over a wash of yellow ochre; marshlands by horizontal light blue patches running into green; troops are shown in the colour of their uniform; crops yellow; water blue, with shading on the shore; wooden buildings sepia; and so on. There are also conventional signs to indicate the nature of the troops, whether cavalry, artillery, or infantry; and others to show various differences in fortifications. By the aid of the plans thus formed and filled in with signs, the general decides upon the movements of his forces, where sieges, encampments, entrenchments, &c., shall be made, and battles fought.

When a plan is made to serve constructional purposes, it is made with accuracy as in civil engineering, or as in an architectural survey. It is only after arriving at a certain point that the three professions diverge. The members of each must be familiar with the nature of materials, their capacities to resist strain, the principles that govern the erection of roofs, arches, domes, &c., and the requirements of different soils in laying foundations. They may travel together so far. Then the military engineer must take a turning that branches off from the road, and leads to a closer study of the minute details of construction; for it may happen that he may be called upon to execute works with unskilled labour quite dependant upon him for instruction; and the science of military tactics must be brought to bear upon all his studies. Geodesy, geography, topography, planimetry, and levelling, must be all pervaded with one thought, that of the subjugation of the enemy, his lands, his forces, his stores, and everything that is his, and resistance to the offensive operations with which he might oppose this process. With this end always in view, the commonest objects present a twofold significance. The unpretending farmhouse, in the distant landscape, that has never echoed with sounds more formidable than the bellowing of cattle, becomes a defensive position. An old stone wall, or a ditch, or hedge, is elevated into a cover, and an obstacle for troops. Gardens, orchards, meadows, vineyards present themselves to the eye as possible forage grounds for men and cattle. Bridges give rise to a calculation of how many men, horses, and waggons they can transport, or how they can be most easily destroyed. Roads and paths, rivers and canals, are so many military communications: wayside crosses or fountains only so many rallying points for armed men. A railway station becomes a point of concentration. All ground is considered only as whether it is available for the movements of troops, or offers advantages for other military operations. All contours and under features are examined for the same information. The last-mentioned objects are those which offer the greatest difficulty to the military draughtsman. As it is a matter of the greatest moment that the altitudes and slopes of hills and mountains should be understood by the officer for whom a survey has been made, these have to be made apparent. Captain Lendy explains the principle upon which contours are shown, by describing the experiment in Burr's system of surveying. If the student would thoroughly master the subject, he should take a stone that is shaped like a hill, and fix the base of it with clay into the centre of a box provided with a plug-hole. He should then fill the box with water, stained with Indian ink. This water is to be drawn off in certain quantities at intervals, giving time enough between each abstraction to leave a watermark upon the stone. When it is all drawn off the stone, or model of a hill, will be stained with horizontal lines or contours which will mark the relative steepness of its parts; for the level of the water constitutes a horizontal plane, therefore the contours are the intersection of the model by parallel horizontal planes. To give a figure to these contours resort must be had to combinations of shade. There are three methods of doing this,—The English, French, and German systems.

The English system of giving expression to contours are of two kinds, the horizontal and vertical styles. The former is that used by Major Petley for the instructions of cadets at the Royal Military College; and by Captain Richards, the instructor of military drawing, at Sandhurst. In this style the ground is figured by horizontal strokes more or less thick, and the altitudes given in figures. The objection to this mode of delineation is, that the roads, in hilly ground, are not easily distinguishable from the horizontal strokes with which they are parallel. In the vertical style the strokes take the direction water would follow on its descent along the slopes. It is found to be no more accurate than the former style, and to labour under the additional disadvantage of requiring more time to execute. It was, however, that used by the officers of the Quartermaster-General's department in the Crimea. Every one giving his attention to this subject must see the advisability of the adoption of one mode of conventional drawing throughout the service, and echo the regret of Colonel Jackson that such a diversity should be permitted; for when an extensive district is to be sketched, and several individuals are employed, it is impossible to unite their sketches so as to form a complete whole, or to determine in which district the most elevated ground is contained. Captain Lendy says the remedy is simple enough: "Let the Council of Military Education fix upon a system, and recommend it to Sandhurst and Woolwich."

In the French system the original contours are preserved on the plan, and hachures are traced perpendicular to them, the equidistance compared with the length of these hachures giving the ratio of the slope. In this mode accuracy and expression are combined; but, like the vertical style, it is at the expense of tediousness. The German system differs from the French in so far that the hachures may be perpendicular to the normal contours with or without reference to their equidistance. The German method of shading marks the leading features very prominently in bold black strokes, but this leads to the inconvenience of obscurity in the small details. Perhaps the best mode would be that which adopts the advantage and rejects the drawbacks of them all,—such a one as Captain Lendy shows in a figure, where the original contours are preserved by representation in horizontal strokes and dots, widening and converging according as light or shade is required. The popular military map of the scene of war bears as little relation to the minute serviceable plan wanted for strategical operations as a garden sun-dial does to a chronometer. The German authority Lehman gives a series of gradations which admit of manœuvres. On a slope figured as 5° infantry may move with order, and fire and charge down hill effectually; at 10° their movements are more difficult; at 15° their fire up hill is harmless; at 20° they can only fire singly; at 40° a chasseur or rifleman must be without baggage, and use his hands as well as his feet to make an ascent; at 45° only picked men used to hilly countries can manage to do this, and even they are in danger of falling. Cavalry has its most effective shock up hill at a gradation of 5°. At 20° the descent of cavalry must be without order, and obliquely. Hussars may ascend at the gradation figured as 30°, but with great difficulty, and only when the slope is of soft earth. Artillery is still more limited in its capacities to counteract natural obstacles. At a slope only of 10° it moves with difficulty, and its effectual and constant fire ceases. At 15° it is *hors de combat*. To give these gradations accurately in the shading is the grand *desideratum*; to give them uniformly throughout the service is only second in importance to this requirement.

Military topography was originally made in writing; the imitative drawing is comparatively a novelty. Plans, as we have seen, are still accompanied by reports. By the aid of the plan, the general unrolling the scroll that contains it takes in at a glance information that would cost him some considerable time to read if it were in the form of notes. Models possess the advantage of a still more accurate representation, but they are too cumbrous to take into the field, and take too much time to make for them to be available for all purposes. As records they are serviceable, as in the case of the models deposited in the United Service Museum, and they can be understood by those to whom the most correct military plan would be a mystery. Captain Lendy gives specimens of the different kinds of plans in use,—photo-lithos of the French ordnance survey (scale 1-80,000th), of the English ordnance survey (scale 1 in. to the mile), military sketches by Major Petley and Captain Richards, the sketch given to the candidates for admission to the Staff College in 1861 and that given in 1863, all the conventional signs, specimens of the different modes of figuring the ground by interpolated contours, the horizontal style, the vertical style, eye sketches, illustrations of the various stages of copied plans; and from these a great deal of general information upon the subject of military surveying may be acquired. In these days of wars and rumours of wars there are few persons who would not find much to interest them in the gallant captain's instructions, which here and there glitter again with realizations of the pomp and circumstance of warfare. The scope of the volume does not compass any note of fortifications, but the one department treated of is so comprehensive, that the student must be very versatile in his tastes who would wish for more. When he has mastered the various intricacies of a military survey he will be an accomplished officer. We alluded to the absence of all instruction concerning the art of erecting fortifications to show that the subject has a limit, and that this has been judiciously observed. The text is interspersed with a hundred and fifty-one figures, besides the forty plates alluded to, the explanatory nicety of which prove that Captain Lendy not only thoroughly understands the subject himself, but excels in the art of conveying a knowledge of it to others. The various instruments used are figured, as well as the rough substitutes for them to which an officer may be driven. He shows how a piece of paper folded may serve to measure and trace an opening or give angles; and tells how distance may be measured by sound or by beat of pulse, or by observation of the number of yards at which men or horses appear as dots, or windows of houses can be seen, when the regular modes of computing either are unavailable. In the instrument department the French also do well. M. Trinquier has recently invented an instrument of so simple a construction that it can be made in a few minutes, which enables an officer in the field to protract bearings and lay down distances without protractor rule, scale, or compasses. The staff officer in France sees, however, that his regular instruments are made as portable as

possible. His plane table divided in strips and pasted on a piece of linen or kid, he can fold up and carry in his holsters. Major Fèvre, of the French Staff-corps, constructed a plane table for military reconnaissance with magnetic compass, scale, and sight-ruler, complete, measuring 11 in. long and 8 in. wide, that only weighed 28 ounces, and which is found to present so many excellences that it is generally preferred to any other both in his own country and this. That our neighbours are equally skilled in the art of modelling tracts of country or coast there is ample evidence in the Louvre. The officers of continental armies being thus accomplished, there is all the more need for a close application, both on the part of our instructors and cadets, to the studies, experiments, and practice, without which proficiency cannot be expected. Captain Lendy adopted a useful feature when he contrived to incorporate with his instructions an impression of the excellence at which other powers have arrived in their military skill. This will inculcate a respect for those with whom we may be hereafter allied, or to those with whom we may have hereafter to contend, which will serve the purpose of forewarning idlers that there are others in the field whom it would be unwise to count upon as reeds shaken by the wind.

Now that the volunteer force has become an institution, there is, doubtless, a more general interest in military surveying and engineering than would have been found ten years ago. Every volunteer would enjoy a military survey of his district; and to make it himself would invest it, as well as his amateur profession, with new lights, and at the same time qualify him for real work of the same kind should the need for it ever come to pass. The heads of schools, too, will find, from the same cause, a relish for martial matters in those under their care which, though always latent in Young England, has not been always apparent. To these classes of students, us well as to the cadets for whom it was intended, Captain Lendy's practical work will be very serviceable.

THE INSCRIPTIONS AT NEW GRANGE.

We have received from the Rev. James Graves, honorary secretary of the Kilkenny Archæological Society, the following letter:—

Sir,—In the leading article of your number for September 24th, which is full of interest to those who are inclined to speculate on the Pyramids, you rightly cite the Great Mound of New Grange, on the Boyne, as of analogous construction.* But you add that there is on one of the "basons" an Ogham or Runic inscription, "which has been translated as the '*tomb* of the hero;'" on the other "bason" al-o "an inscription, which has been translated as the '*house* of the god.'" And then you state, as if quoting another inscription, "The Chamber," in which these basons are, "is dedicated 'to the Great Mother, Ops.'" Now, the *Builder* is a journal of wide circulation and high authority; and statements of such importance and interest as the above must prove to all archæologists, made with such an air of absolute certainty, are sure to be quoted as facts, if now allowed to pass. I wish, Sir, that your statements were true, for then would our Great Irish Pyramid become of tenfold interest; but I am sorry to be obliged to give them *an unqualified contradiction*. Irish archæologists are well aware that there is not a vestige of an inscription (though there are many rude carvings), on any stone, now visible, in or about the mound of New Grange; or, indeed, I may add, on any other monument of a similar age and character in Ireland. I have examined the chamber myself, and so can speak positively as to their absence at New Grange; and I beg to refer you and your readers to Sir William Wilde's description of New Grange, and its cognate Pyramidal mounds on the Boyne, given in his admirable volume, "The Boyne and the Blackwater" (McGlashan, Dublin, 1850), for the latest and best information on the subject. Like the Great Pyramid, our Irish one gives no "literal" account of the object for which it was erected.

Now, before giving our authorities for what we stated as to New Grange in our review of Professor Smyth's book on the Pyramids, we must remark that we not only regard Mr. Graves as a very high authority on such a point, but that, when we ourselves visited New Grange, we, also, neither saw nor heard of any such inscriptions as those to which we have nevertheless had good authority for referring; but our not having seen them does not prevent us from believing that these inscriptions had at one time been seen by others, as stated,—whether now existing or not existing, or whether they be only visible in the dark chamber under very favourable circumstances as to light and position. As to the *latest* information, both Mr. Graves and Sir William Wilde will excuse us, we feel assured, for remarking that on such a question the latest information may not be the best. The information we have to adduce is, on the contrary, not far short of one hundred years old; and, considering that ever since the opening of the passage into the central chamber, the influence of the air has been operating on the inscribed surfaces, in such a case the *earliest* information is probably the best.

In 1770, according to the *Archæologia* (vol. ii. pp. 254, &c.), Governor Pownall read a paper on New Grange, before the Society of Antiquaries, in which he says,—

"Examining very narrowly, with a candle in my hand, all the parts of this cemetery, I discovered, on the flat stone which forms the north side of the left hand niche, what I took to be the traces of letters. Their form is given in the wooden cut annexed [it is notable that the first of them very much resembles, in style of character, several recently discovered among the Northumbrian rock symbols]. These lines were of a breadth and depth in which I could lay the nail of my little finger; and of different lengths, from 2 in. to 6 in. I tried for some time to assign, if possible, these letters to some known alphabet, by comparing them particularly with that of the Beth-luis-nion, or old Irish alphabet. . . . . These characters are evidently neither Irish, Runic, nor Saxon."

Pownall was of opinion they were Phœnician; but Higgins, in avoiding to quote Pownall's remarks as to the inscription, gives as his reason, "the old languages of Ireland being unknown to" Pownall, and hence his *opinion* on the subject, "not to be depended on," although he does not doubt the fact of the inscription having been seen, —even with a candle, we may add, and hastily, after having "remained in the cave much longer than was prudent," whereby he "caught a violent illness,"—circumstances which may account for his not having seen the other inscriptions now to be also spoken of.

In 1786, Colonel Vallancey, in his "Collectanea Rebus Hibernicis" (vol. ii. p. 211), says,—

"The most ancient inscriptions *now* [in 1786, or previously] *remaining* in Ireland are undoubtedly those found in the tumulus or mount of New Grange, near Drogheda, in the county of Meath. This curious remnant of antiquity, which appears to have been a *sepulchre and temple*, we shall defer giving a particular description of. . . . . Confining ourselves here to the explanation of the *several inscriptions found in the cave or dome* situated in the centre of the mount."

He then minutely describes and explains no less than seven of these inscriptions; but we shall only quote as to those three to which we referred in our article on the "Pyramid:"—

"No. 3 is found on the front of the covering stone of the east tabernacle, and is written in symbolic characters, signifying *the House of God*. It is remarkable that all the ancient altars found in Ireland, and now distinguished by the name of cromlechs or sloping stones, were originally called *Botal*, or the House of God; and they seem to be of the same species as those mentioned in the Book of Genesis, called, *by the Hebrews, Bethel*, which has the same signification as the Irish Bothal. The tabernacles in the mount of New Grange have an exact conformity to the cromlechs found in different parts of the kingdom.

No. 4 is found on the south side of the east tabernacle, *written in the Ogham and symbolic characters*. The symbol is that representing the earth and universal nature, and with the Ogham, which is written from the left to the right, makes *a mor an Ops*, that is, *To the Great Mother Ops*, or to the great Mother Nature.

No. 6 is found on the north stone of the west tabernacle, *written in the Ogham Bobeloth and Ogham Croabh characters*, from the right to the left; the first character being an Ogham Œ, the second a Bobeloth M, and the others in the Ogham Croabh are G, U, H, making Oenguh Oenguth, that is, *the Sepulchre of the Hero*.

At what time this tumulus was erected cannot be ascertained; it probably was not long before the art of writing became universal in the island, as all the different species are contained in the inscription."

May it not be that the inscriptions in the sorcery-hall at New Grange would still be visible under favourable circumstances as to light and position, although none at all may be seen under other circumstances? Pownall's *candle*, and his fatigue, or impatience, were not likely to reveal all those inscriptions which Colonel Vallancey afterwards so minutely describes, and hence Pownall seems to have only observed *one of them*, though the others seem to have been afterwards seen there. Just so none of them may usually be seen, even though they be still there, and might perhaps be made visible by a light such as the magnesium wire light, for example; but it may be, that during the last fifty to a hundred years, or since the passage was opened and the incisions exposed to the influence of the air, they may have all scaled off. Whatever be the case, however, in this respect, there is quite sufficient authority for all that has been said in the *Builder*.

We may add, that Mr. Graves is mistaken in supposing that we stated the inscriptions to be *on* the basons in the niches,—or kistvaens, as Pownall calls them.

These "basons," by the way, are between 4 ft. and 5 ft. long and between 3 ft. and 4 ft. broad; so that they may well be regarded as analogues of the kists of the Egyptian pyramids.

* Did the fact escape you that Gaelic tradition derives the earlier colonists of Ireland from Egypt?

TRICKS OF TRAVELLERS.

Under the heading of "The Brothers Davenport," a party of adventurers from America, five in number, here to exhibit certain "manifestations," have been so fortunate as to obtain such prominent notice by well-known writers in leading journals as will doubtless send numbers of persons to them. Written with candour, and describing, we have no doubt truthfully, what occurred, the unquestionable inference to be drawn from the notices nevertheless is, that the writers believe they witnessed an exhibition of some unknown intelligence and force,—"an annihilation of what are called material laws;" and the notices are thus calculated to do much mischief. A week ago the writer was present at a *séance* with the party in question, in the private house of a distinguished gentleman: lords, ladies, naval captains, poets, artists, and public writers, formed the circle; two of the mediums,—not the Davenport brothers, by the way, to whom the power was at first attributed, as one of them being unwell had his place supplied,—were tied to their chairs in a manner that seemed quite secure, and then very complete darkness being produced, guitars were strummed, bells were rung, and individuals touched; while, on the candle being lighted, the two mediums were seen still tied in their chairs. Other acts followed, such as have been described in the newspapers; thus the coat of one of the performers was whisked off (in the dark), and a loose coat, opportunely in the room, was whisked on. Again darkness, and the removal of the cords was heard, ostentatiously grating, and a light showed the performers unbound in their chairs, to which afterwards they were again tied up by "an unknown force!" When we say that half the eminent persons in the room, professed themselves thoroughly assured that other than ordinary agencies had been at work, it will be supposed, and rightly, that the tricks were cleverly played. The whole affair, however, is too gross and preposterous to stand a moment's reflection. Only admit that one of the two mediums so contrives, when being tied, that he can free his hands, and all else is perfectly simple. The whole proceeding is not half so difficult to comprehend as some of the professional conjurors' tricks, and it might be thought we were wasting space in thus stepping beyond our province to denounce the imposition; but when it is found that a Master of Arts more than hints that these adventurers belong to a quiet society, "the silent heralds of a social revolution, which must shake the world!"—and we know the extent of the "colossal self-deceit," which permits itself to be made stronger by such exhibitions, it becomes the duty of every man who can obtain a hearing, to assist in exposing the injurious imposture. By what curious shutting up of the reason intelligent men and women can bring themselves to believe that those cords were noisily pulled through the loops into which they had been twisted, and were afterwards put round the performer, and tied clumsily to the table, without hands, it is difficult to say. Just reflect on one of their assertions, that unless a circle is formed by the spectators, if people in the dark can be so called, holding each other's hands, nothing can be done; and that if broken some one's head will be so too; and recollect that after all it is no circle at all, only a part of a circle, and it must surely suggest that this threat is merely to prevent detection. If the writer, when his own hand was pinched by a hardish thick hand with very tangible nails, recognized with tolerable certainty as that of one of the mediums, had sprung out and seized hold of the arm beyond, he would probably have received a blow on the head with a hand-bell or guitar, but the trick would have been made obvious to those who were willing to be convinced. The entertainment closed by the table rapping out the word "Retire," much as they say "Farewell" in coloured fires at the close of a pyrotechnic exhibition; but the slovenly manner in which this was done by the operator showed in what contempt he held the common sense of his audience,—running rapidly on with the alphabet when the letter sought was at the end of it, and pausing when he came to the letter itself, so that it positively did not need the raps, which were once or twice in the wrong place, to make out the word that was desired. These practitioners were chased out of Canada, according to a most circumstantial statement in Toronto papers; one of them, it is asserted, was formerly in the employment of the Wizard of the North; and the whole affair will doubtless be blown in England presently; but in the meanwhile they

are aiding an evil delusion which is much more widely spread than some believe, and will walk off sneeringly rejoiceful with pockets full of John Bull's guineas.

NOTES OF A PROFESSIONAL TOUR IN THE COLONIES.*

St. John's is built in a sheltered situation, on the declivity of a hill, on the west side of the island, originally selected as a protection against hurricanes, which generally rise in the south-east, sweeping gradually round to east, north, and approaching the south,—indeed, nearly all round the compass, before they are spent: so the situation is good on that account.

The city is well and regularly laid out: the main streets are spacious, and run east and west, to catch the breeze from the trade winds; and there are narrow streets running across them at right angles, one of them being the principal street (Market-street). The carriageways of the streets are in very good order, and there are good channels, paved with flat stones, on each side, which is the only drainage they have, as there is a strange prejudice against covered drains. The city is tolerably well scavenged; but almost every house is required to have a privy with open cesspit, a most unhealthy arrangement, and an intolerable nuisance in a hot climate. There is at present no supply of water except what is caught in iron and masonry tanks from the roofs of the houses; but a plan of water supply has been laid out, to procure water from the elevated hills and springs in the south-west of the island, the estimated cost of which is 30,000*l*. The population is about 8,000, and the whole island contains about 35,000: of these 26,522 are blacks, 2,172 whites, and 6,714 coloured. This population is ascertained by a correct census; and at the last census it was found there was an increase of about 2 per cent. only: probably this slight increase arises from the same causes that are in operation at Jamaica.

The principal building is the cathedral, a large and imposing erection, built of magnesian limestone, which cost the colony nearly 40,000*l*. The architect was Mr. Fuller; but the style of architecture was selected by the committee of management, and is not quite suitable for a cathedral. A good view of it is given in the *Builder* (vol. vii., p. 595), and a description of the works. The interior is not yet finished: the pitch-pine lining, pews, &c., want varnishing, and the exterior face of the stonework is decayed in many places. Ransome's stone preserving process has been used without effect, as decay progresses, probably occasioned by those which have been selected being too soft. The stone with which the old cathedral was built is said to be much harder and more durable. It stands upon the site of the old cathedral, which was completely destroyed by the earthquake of 1843, and precautions have been taken in the new building, by the addition of a peculiar framework of timber, to prevent such another catastrophe.

The cathedral stands upon the highest point of the city, and from the west front you have a magnificent view of the whole city below you, the harbour and shipping, Rat Island and raised Causeway, Fort James, and Goat-hill, and the remarkable hills of Five Islands, and the huts of Green Bay Village (Rogue's town), and the background of the picture is the dark blue sea. Below the cathedral, on sloping ground, is the burial-ground, intersected with paved pathways, and shaded by avenues of trees, called the Barbadoes evergreens: the roots of these trees have the peculiar property of spreading and penetrating to long distances, frequently uprooting walls and buildings. There are some fine monuments of distinguished men, Bishop Rigaud, and others, in the graveyard. The burial-ground is surrounded with a wall, and at the principal gateway on the south side, the pillars are surmounted by two good statues of saints, which were primarily intended to adorn some Catholic edifice in Guadaloupe, or Martinique, but were intercepted by a British man-of-war, and carried away as trophies, and are now erected to embellish the entrance to a Protestant cathedral.

Government House is a large quadrangular wooden erection, situate in a slight hollow, to the east of the city, laid out in the tropical style, with spacious balconies, and verandahs below, and windows with jalousies above. It has a large entrance-hall, and on each side are spacious dining and drawing rooms (the latter newly made), and on the upper floor a full suite of sleeping apartments. The drawing-room and governor's offices have been recently altered: a building that stood east and west has been reversed, and placed north and south; and to accomplish that object, and to lay out the grounds around, they have absolutely diverted and spoilt one of the principal entrances to the town,—in fact, planted the building immediately across the line of street. The alteration of this building has cost upwards of 4,000*l*.: almost as much money has been spent upon this ill-built botched-up structure, as would have erected an elegant mansion, suitable for the Queen's representative, on a more elevated and eligible site to the east of the city.

This matter has been a subject of warm controversy between the governor and Assembly, as the former wished a change of site, and a more convenient building.

The Court-house is a large, square, neat, and spacious building of *painted* stonework: it contains the chambers for the Assembly and Legislative Council above, and a court below for the law and administration of justice. The upper rooms are sometimes made use of for balls and other entertainments.

The Market House is a new erection. It is situate in the lower part of the town, close to the harbour. The market-place covers a large quadrangular piece of ground, about 220 ft. long, and 90 ft. wide; and on the north and south sides are erected two ornamental timber buildings, 23 ft. wide, the whole length of the plot, the outside being closed in from the street, and the inside left open, and supported on hard wood pillars, varnished, the spaces between them being filled in with an ornamental balustrade. An open space is left between the buildings, which is planted with some of the beautiful evergreens of the tropics for shade, and for those who prefer to sit out in the open air instead of inside the building. The buildings are laid out with stalls and stands, which are well supplied with the products of the colony, and form an object of great attraction to the inhabitants. A fountain was laid out to be fixed in the centre of the open space, so as to afford a good and convenient supply of water. A slaughter-house was to be erected at the north-west corner, and a fish-market at the south-west corner, on piles over the harbour, so that all filth might be readily washed away, and a good supply of water obtained for cleansing purposes.

The market has been visited by many strangers from the other West-Indian islands, and they one and all agree that it is without doubt the best arranged and most complete of any in the West Indies. I understand they are going to erect one at St. Kitt's, on the same model, it is so much approved of. The treasury and library in one building is a good substantial brick erection, with a wide gallery and verandah in front. The rooms are spacious and convenient, and it is just opposite the market.

They have a large space of ground laid out for a public hospital, established by the late benevolent Rev. Mr. Holberton. It is rectangular in shape, and at the east end are detached buildings for house-surgeon's residence, surgery, and dispensary. On each side of the plot are several small detached wooden houses, or huts, about 18 ft. by 9 ft. or 10 ft., containing each four beds, and they are built about 3 ft. above the ground. At the west end is a large building, with ground and upper floors. The upper floor is used for the seamen's hospital, with three wards, 17 ft. by 16 ft., containing each six beds; and there is a gallery, 4 ft. wide, to the east, for the exercise of convalescents.

This hospital is better laid out and arranged than those at Honduras are, as many medical men prefer the small detached houses, enabling them to separate cases; but still this hospital is open to great improvement: it is too much crowded, and the site is one admirably adapted to lay out a fine and commodious building, on the pavilion or other open and airy principle.

Near the hospital they have a small botanical garden, called Holberton Gardens, in which all the tropical flowers, and many cultivated in England, bloom and flourish in rich luxuriance.

The old gaol has been abandoned some time, and they now occupy what was formerly the barracks for that purpose. It is situate to the east of the city, and it contains wide galleries on the east side, and large, lofty, and spacious cells, which are well ventilated. It is not well arranged for such a building, but still it is a marked improvement on the old "black hole" typed structure. The prisoners are principally and usefully employed in repairing the roads and on the public works; and it was suggested that Antigua should become the depôt for West Indian criminals, and that they should be employed in the improvement of English and Falmouth harbours and works connected with it, so that these fine and hitherto neglected harbours might be made available for every purpose,—amongst others, the central depôt for the West Indian packet service.

There is also a small lunatic asylum, which usually contains about forty lunatics. It is situate on the summit of Rat Island, in a very cool and healthy place; but the buildings themselves are totally unfitted for the purpose. The main building is within the enclosure of the yard: it has seventeen cells on the ground floor, and five above: those on the ground floor are 7 ft. 6 in. by 6 ft.; and the passage between the cells is only 3 ft. 6 in. wide. In those small, confined places, are the unhappy lunatics shut up at night with the thermometer ranging above 80°, and this is sanctioned by the Government of a Christian colony, presided over by high dignitaries of State and Church.

There are, also, a well-arranged police-office, and a poor-house: the latter is very much overcrowded for the want of room in the building, one ward 19 ft. 9 in. by 16 ft., being occupied by nine women and six children.

The Wesleyan Chapel, a large and lofty quadrangular building, is situate a short distance to the south of the cathedral; and the complaints that were made years ago, of that loud and boisterous singing, disturbing the devout at the cathedral, are well grounded, and as rife as ever. There is also a Moravian church built of iron, presided over by a bishop; and a Catholic chapel, principally supported by the Portuguese.

There are not many well-built houses in St. John's: the houses of some well-to-do planters (town residences) and a few others are tolerably good, and there are some good houses built of brick; and it is remarkable that the latter buildings withstood the shocks of repeated earthquakes without crack or failure, while stone-built houses have been totally destroyed, and brought to the ground; and even many timber houses injured: but I suppose this is caused by the careless manner the masonry is put together, the face and back of the wall being merely cased with stones, and the interior filled in with rubble stone and bad mortar, and with scarcely any bond stone to hold them together; and the consequences are, the walls split with the vibration and concussion; the insides falling one way, the outsides another.

Many of the larger houses are in a dilapidated state, from decay and from injuries received by the earthquakes (particularly the one of 1843), and never repaired; and where the ruinous houses exist,—and they are frequent,—it gives the city a very neglected and forlorn appearance, particularly to strangers.

The houses at Belize are similarly built to those in Antigua, except some have piled foundations, and are frequently erected on brick or stone pillars, so that the air may circulate under and around them. Many of the houses in St. John's are built on brick or stone foundations, as the substratum is good, and the walls are sometimes carried up to the level of the first-floor, but generally a little above the ground, and then raised up on pillars of hard wood (bulley, cinnamon, gregory, locust, moro, ironwood, &c.), or pitch pine of the United States, into which are framed the pitch pine ties and braces, to hold the fabric together, and on which the roof rests. The roofs are generally collar-beam ones, framed out of pitch pine, and covered with close boards and cypress shingle. The front walls are usually cased outside with 1-in. white pine boards, and then covered again with clap boards in 4-in. courses; so the exterior looks like coursed brickwork, except in colour. The interior of the rooms is usually cased in the same way, and afterwards painted or papered. They sometimes use glazed sash windows, with outside shutters and inside jalousie blinds: others have merely jalousies and outside shutters only.

The floors are generally laid with pitch pine boards, matched, grooved, and tongued, which makes a good and durable floor, very far superior to the boards generally used in this country for floors.

The plans of the houses are generally the same as are adopted in other tropical places, viz., with balconies and verandahs in front only, or all

a

* See p. 665, *ante*.

round, the door leading out of them into the hall, which is in front, and the bedrooms on each side, a central passage at the back. The balcony is approached generally by an outside staircase. The carpenters' work is not first-class, and which, I understand, is gradually getting worse and worse: they have no system of apprenticeship so that the young beginner can be thoroughly initiated into his trade, as they say that looks too much like slavery, and the consequences are, the learner works for a year or so, and then has the conceit to think himself efficient, sets up for himself, and works on his own account as an expert carpenter.

There are several public schools connected with the Church, Wesleyans, and Moravians, and one educational institution established out of the funds of the Lady Mico Charity.

The island is divided into seven parishes, and each has a church, and three chapels of ease in connexion with some of the parishes. St. Peter's, at Parham, is an octagon-shaped, curious-looking edifice; St. George's, a plain rectangular stone building; St. Mary's, a timber erection, of the St. Paul's type; and St. Philip's, a stone building in the Early English style, erected from the design of Mr. Fuller. It was originally intended to have a tower and spire, but that was abandoned from a two-fold cause;—firstly, shortness of funds; and, secondly, the fear of earthquakes, that requires buildings to have broad bases and but little altitude. St. Philip's is unfinished: the roof-timbers are incomplete; and there are no permanent seats or pews fixed. The roof was originally covered with galvanized iron, and being in rather an exposed situation, overhanging Willoughby Bay, a hurricane that took place stripped it off, and crumpled it up as if it had been so much brown paper; so, in consequence, galvanized iron, for roof covering, is not much in favour there. From the rocks near the parsonage-house, one of the finest panoramic views in the world may be obtained. The whole island, which is of an irregular figure, lies before you; the large fortifications of the Ridge and Monk's Hill to the south-west, St. John's Cathedral on the north-western horizon; while the trees and woods that line and cover the rough and craggy summit of the Fig Tree Hill range, break the view of the sea to the south-west.

The heart of the island, green and verdant, lies before you, principally plantations of sugar-cane, with here and there pasture land, frequently intersected with roads, and the numerous houses of the planters, windmills, and sugar-works, embosomed in trees, have something of the appearance of country mansions in England. Below you lies Willoughby Bay, with its alternately light and shaded transparent blue waters, while generally ride at anchor the Droghers, vessels that are employed for the purpose of taking sugar to St. John's for shipment: the whole combined forms a most interesting and beautiful landscape. Another fine excursion and view is to Fig Tree Hill, about the highest summit in the island, probably from 1,000 to 1,200 ft.: it commands a view of the whole island and a considerable extent of the surrounding sea. Guadaloupe, Montserrat, Nevis, Barbuda, and St. Kitt's, may all be distinguished by the naked eye. The winding and tortuous descent of Fig Tree Hill is a landscape of exquisite beauty: the rough and rugged character of the mountains, covered with bush, and a great number of forest trees about the tops and the declivities of the cliffs, and luxuriant festoons, and knots or nets of convolvolus, or other evergreen creepers, connect them all together in one great tracery of branches, leaves, and flowers.

By the side of the road near the summit of Fig Tree Hill is a spring called "Tom Moore's Spring,"—I presume, named after the celebrated poet; but I could never learn whether it was so named or not, or that the poet had ever visited the spot, and had drawn any poetic inspiration from that pure and elevated source.

There are several good mansions in the island: amongst them are "Mount Joshua," belonging to the Hon. Mr. Jarvis; "Cedar Hill" (Sir W. Byron's); "Betty's Hope" (Sir W. Codrington's). Many of the planters' houses are pleasantly and picturesquely situate, and constructed on a spacious and substantial plan, but generally in one style, with balconies, verandahs, and jalousies all round, to exclude the hot sun and provide for the admission of cool air.

A small park or lawn is commonly inclosed around the house, and the sugar-works (which are picturesque at a distance, but very disagreeable appendages close at hand) are so well concealed by trees and bushes as effectually to prevent their being seen from the house.

Beautiful gardens are generally attached to them, for which the floral world of the tropics afford such ample facilities; but the floral vegetation of the tropics, although very gorgeous and majestic, is not so finely diversified and graduated as in England. The scarlet cordia, the pink or rose-coloured oleander, the crimson and yellow hibiscus, the brownish and bright orange feathery-looking flower fence (Barbadoes pride), the plumeria and other jessamines, the white datura and whiter amaryllis, purple wreaths, and white, pink, and blue convolvolus, with endless varieties of other flowers, these many-coloured gems of nature, of massy, deep, and striking tones, are set in beautiful relief by the dark green foliage on which they are surrounded and fixed.

The roads of the island are generally in a good state, except when they are injured by the tropical rains, which are soon repaired, and the inhabitants delight in a species of vehicle called "John Bott," probably after the name of the inventor, and which is simply a gig with a leather top supported on a light iron framework to cover the head, and protect it from the intense rays of the sun, to which curtains are affixed that may be lowered down or not at pleasure, so as to protect the person from sun or rain. They are very nice and useful vehicles, of which I availed myself largely during my stay in the island, and appreciated their advantages.

As a striking contrast between the two colonies Honduras and Antigua, I may mention that at Honduras they had only one carriage (an American waggon), lately imported by a Spanish merchant; while the day after my arrival at Antigua there was a distinguished wedding, in which all the carriages and pairs in the island, I believe, (barouches, curricles, and closed carriages,) were called into requisition, and the black coachmen and footmen were gaily decked out with wedding favours. The negroes always make a great display at their weddings: they sport their carriages and pairs, either borrowed from their opulent neighbours, or hire them, so as not to be outdone by "Buckra."

It happened to be my good fortune to be present at Antigua on the visit of his Royal Highness the Prince Alfred, Feb. 15th, 1861. He arrived in the *St. George*, Capt. the Hon. — Egerton, and accompanied by Major Cowell, R.E. Great preparations had been made to receive him: the houses on the route of the procession had been all newly painted and polished up, and were gaily decorated with flags and various devices, and triumphal arches of all kinds were erected at every available spot in the streets, covered with evergreens and flowers, and suitable mottoes. Photographs of the arches and principal buildings were sent home by the governor to her Majesty the Queen. At Shand's Wharf, where he landed (now called Prince Alfred's Point), he was received by the governor and military in full-dress uniform, the bishop and clergy in full canonicals and other authorities in full dress. The guns at the forts boomed out the royal salute, the band struck up "God save the Queen," and he landed under an elegant tent, the floor of which was covered with scarlet cloth. Every available spot was occupied at the landing-place to catch a sight of the "Sailor Prince:" the beauty and fashion of the island turned out *en masse* to do him honour: the coloured and black ladies tried to outvie the "Buckras" to render him homage; and the delight they experienced to see a real live prince could scarcely be kept within reasonable bounds.

This, I may mention, is the second royal visit they have been honoured with in the memory of living man: H.R.H. Prince William Henry (the late William IV.) once visited them, and a right royal reception, I understand, he met with.

At 4 p.m. a grand levee was held at Government House: the bishop and clergy, the chief justice and bar, and every official and gentleman in the island attended, and it passed off most agreeably and pleasantly to all parties concerned. In the evening, a public dinner was given at Government House, which was well attended by the ladies and gentlemen of the island, and every delicacy of the season that the tropics could afford loaded the tables, and wines of the most *recherché* brands.

After the dinner was over, some beautiful fireworks, with elegant devices, were let off in and about the grounds of Government House, and the celebrated "Tar Barrel Dance" was introduced. A series of negroes, as black as you would wish to see them, form themselves into a procession, each with a lighted tar barrel on his head, and they dance, wind, and curvet about, singing snatches of some negro melodies, or political or other remarks to the tunes: for instance, they sang, "Show him round the town, show him round the town!" Their meaning probably was, that he would see the dilapidated state of many of their houses, or that the streets where they lived, probably backs ones, should be honoured with a visit as well as the front or better ones.

The following day the Prince visited Fig Tree Hill and the remarkable places in the island, accompanied by the governor and other officials; and in the evening a grand ball was given at the Court House, at which the Prince, the governor and lady, every official and gentleman and lady in the island attended; and there was a goodly sprinkling of coloured people, and the room was so crowded there was scarcely space to dance.

The Prince's visit was a very successful one: it produced spontaneous demonstrations of loyalty from all classes: every one tried to outvie each other in expressions of attachment to the throne and to the institutions of the country: it afforded the Prince an opportunity of becoming acquainted with the internal resources and peculiarities of our colonies, which may strengthen the bonds that unite them to the mother country.

The geological formation of the islands is interesting: the Caribbean Islands are divisible into two distinct classes, the one occupying the mountainous range on the western sides, exhibiting all the character of recent volcanic action; the other, composing the islands forming the eastern chain, presenting in a more or less regular order the calcareous strata of the upper marine formation, dipping towards the east. The first embraces all the islands on the western side from St. Vincent to Saba: in the latter are comprised Barbadoes, Descada, Grandeterre in Guadaloupe, the northern half of Antigua, Barbuda, St. Bart's, St. Martin's, Anguilla, and Anegada.

Santa Croix exhibits also a stratified formation of the same character, but with an inclination in the opposite direction. It would appear, therefore, to be on the western side of the line of volcanic action. Antigua occupies an intermediate position between these two classes, and partakes, more or less, of the character of each; consequently, it presents an interesting study to the geologist.

It comprises three distinct formations of the tertiary class, of which the most superficial beds occupy the northern and eastern divisions of the island. These consist of calcareous marl and coarse sandstone, interspersed with masses of a tolerably compact shell limestone. The mountainous district forming the southern and western divisions is composed of rock of the newest floetz trap formation, as wache, porphyry, trap, breccia, amygdaloid, and some spherical masses of basaltic greenstone. The intermediate district is occupied by a series of argillaceous strata of varied character. The most superficial consists of a loose friable marl of a yellow colour, with olive-brown spots, containing numerous concretions of a lenticular form; the next stratum being a white indurated clay, of a slaty structure, intersected by seams, which divide it into tabular masses. Inferior to this, we find another tabular rock, of a coarser grain than the last, which, being highly impregnated with green earth, presents a beautiful sea-green or bluish colour. The next, and lowest in the series of the formation, is a stratum of a liver-brown colour and conglomerate character, having embedded in it masses of the different species of the trap family. All these strata dip at an angle to the north and north-east, and extend across the island from the ridge to the neighbourhood of St. John's. The order of stratification is somewhat disturbed by the irruption of a large mass of the trap family at Drew's-hill. This spot is worthy of a more minute examination, for it contains the only marks of recent volcanic action that have as yet been discovered in this island. Streams of lava, some more compact, others vesicular, are found at the base of the hill, bearing the impression of the leaves of dicotyledonous plants. These three formations do not pass imperceptibly into each other, but are divided by well marked natural boundaries. The southern limit of the calcareous district is formed by a zone of low land, extending from Willoughby Bay, on the south-east, to Dickenson Bay on the north-west, which at no very distant period appears to have been submerged by a

narrow firth, dividing the island into two, like the Rivière Sale of Guadaloupe.

The clay-stone is divided from the trap-formation by the Body Ponds and the stream which issues from them, running towards the north-west through a beautiful luxurious plain. The surface of each district presents also peculiar features. The calcareous is exceedingly broken and undulated, consisting of a series of round-backed hills, of no great elevation, covered with a light arid soil. The summits of these hills are overgrown with the wild sage, loblolly, crotons, and other shrubs. The sides are highly cultivated, and are very productive. The clay-stone formation presents a precipitous escarpment towards the south and south-west, and a gentle declivity in the opposite direction. This is the most barren district in the island, considering that it is everywhere accessible to the implements of industry. The district occupied by the trap formation consists of mountains, some of which rise to the height of 1,000 or 1,200 ft. Others, of the same elevation, are more rounded and less precipitous, affording a good soil for the sugar-cane, even to their very top.

The fossils and petrified wood are pre-eminently beautiful: they are found in various parts of the island by the curious; and there are some fine specimens of the cocoa-nut, and root, and the top of a cabbage-tree enshrined in a bluish-white chalcedony, so that the most delicate folds of the core, and young leaves, were visible as through a piece of plate-glass. Calcareous spar, agates, chalcedony, quartz, and jasper, of various colours abound. Associated with the chert are found great quantities of petrifactions, stems of palm, logwood, cedar, and other woods, and the kinds and different qualities of the woods are distinctly marked, and can be traced.

The agricultural operations of the island do not appear to be very skilfully conducted: sugar is the staple product of the island, and consequently the sugar-cane is the chief business of the agriculturists. On many of the estates they use the old-fashioned plough, worked by oxen imported from Africa, and sometimes mules; but steam-ploughs have recently been introduced on a few of the estates, and this will doubtless lessen the cost of the preparation of the land for the crops, where it can be used, as they appear very cumbrous machines; but I apprehend the great difficulty planters have to contend with is not so much the preparation of the land, as that is only done once in three or more years, but it is the clearing off the crops when ripe, weeding, &c.; and this is the time, when the crop is ready, that Quassy plays his fantastic tricks, for he cannot be induced to labour unless he is paid a price sufficient to enable him, with two or three days' labour, to earn enough to support himself during the rest of the week, and unless that is paid the crops spoil on the ground. The weeding, also, in showery seasons, is an expensive operation, as the cane-field requires to be kept perfectly free from weeds, but the Devil's grass (*Cynoden dactylon*) is the great pest, and has hitherto resisted every effort of the planter to eradicate it.

One of the great evils in Antigua, as in many of the West India islands, is absentee proprietors. In Antigua there are 159 estates, and there are eighty-two resident proprietors, and seventy-seven non-resident proprietors, the business of the latter being managed by attorneys, managers, and overlookers; and there are usually 56,565 acres of land annually under cultivation, but in the year 1861, 24,070 acres only were cultivated.

The islands produce most of the fruit and vegetables indigenous to the tropics; but little care is taken with their cultivation, and a large supply is received from Dominica and other islands. Antigua is very celebrated for her black pine-apples; and the fibres of their leaves are also very useful for manufacturing purposes. The principal trees are the red and white cedar, mahogany (small), logwood, manchineal (this tree has peculiar poisonous properties: if a drop of water from it, after rain, fall on your skin, it will burn and blister you), mangrove, wild almond, tamarind, acacias, sand box, silk cotton, calabash (the fruit of which is large and round: the shell is used for cups, bowls, dishes, &c.,—in fact, the negro's breakfast, dinner, and tea service), cocoa-nut and cabbage trees (scarce), and other trees.

The planters appear to have a deadly antipathy to trees, as they are continually cutting them down to clear the ground for a few additional cane plants; and I believe it is owing to this circumstance that such serious droughts take place in the island, producing at times great distress.

The climate of Antigua is warm and dry: the maximum temperature is 90°, minimum 66°, mean due point 70°. The usual height of the barometer is 30 in.: occasionally it rises to 30·15 in., and falls as low as 29·8 in. The rain-fall is said to be 45 in., but this is very irregular and uncertain. In some years the rain-fall is very slight: at others very heavy falls of rain take place; and in 1861 and 1862 they were remarkably wet years, and 1863 and 1864, on the other hand, were very dry. From February to August or September the cool trade-winds infuse life and health into all creation; and from September to February the weather is changeable, heavy rains and storms occur, and even hurricanes, forty-three of which have visited and devastated this island since its discovery by Columbus. On the approach of a hurricane the barometer falls suddenly from ·50 in. to 1·86 in. below its ordinary height some twenty-four hours before they take place; and this affords the inhabitants a warning, so that they may place their houses, &c., in order, and protect them as well as they can from its sweeping and devastating powers. Antigua is the residence of the Governor-in-Chief of the Leeward Islands, and he is assisted in its government by an executive council and an administrative committee formed from that council.

The laws are framed and originated by a House of Assembly and Legislative Council, the most important of which laws are sent home for approval by the Home Government.

The revenue of the colony is principally raised by import duties, a favourite mode of raising revenue by our colonies; and there is a slight export duty levied upon sugar, rum, &c., to provide immigrants, as the scarcity of labour in favourable seasons is severely felt; while, on the other hand, in dry and bad seasons, labour is too plentiful—in fact, great distress and hardships are suffered: so it is a very difficult question to apply a satisfactory remedy.

The public works of the colony are managed by committees appointed by the House of Assembly, and each committee generally selects one of its own body to take the chief and active superintendence; but not being an expert, he usually appoints a master-carpenter or other tradesman to direct the mechanics and labourers, who are all employed and paid by the day. A mechanic's wages are 2s., and a labourer's from 10d. to 1s. per day: a master-carpenter would get his dollar or dollar and a half per day. This system is found to be a very unsatisfactory way to execute work: it is very costly, as they are always a long time on hand: a mechanic there will not do more than one-third or one-fourth part of what an able-bodied man can do in this country, and they one and all complain that they are oppressed and underpaid. The materials required are ordered of the different merchants, and if they are members of the Assembly, they stand the best chance of obtaining the order. They generally make a large profit by the articles they supply; in fact, they lay on an extra per centage for anything they dispose of to the public.

The laws are administered by a chief justice, assisted by an attorney-general, and a large bar. The barristers in court do not wear the wig—merely the gown and band; and as Quassy is very litigious and fond of law, they usually reap a very large and profitable harvest, and spend it. Generally their dinners and entertainments are of so *recherché* a character as to gratify the most fastidious taste, to which many visitors, both naval and others, can fully testify. The negroes themselves are first-rate lawyers, thanks to emancipation and the march of intellect: they generally throng the courts of law, and are perfectly *au fait* to the points and quirks of law.

In drawing my article to a conclusion, I hope it will not be thought out of place or invidious if I make a comparison between the colonies of Honduras and Antigua,—the former young, vigorous, and flourishing, dispensing with lawyers, and referring all questions of dispute to the primitive and simple process of arbitration; while the latter is old, depressed, exhausted, and all but used up,—the hotbed of litigation: law-suits are the order of the day: the law-courts are seldom closed; and it abounds with gentlemen of the long robe, thriving and prosperous, who, vampire like, drain the life-blood of the island, and leave her to languish and perish.

B. C. E.

ON THE FIREPROOF CONSTRUCTION OF DWELLINGS.

Mr. Henry M. Eyton, architect, has sent the following communication to the Society of Arts:—

In the report addressed to the council of the Society of Arts, entitled "The Statistics of Model Dwellings," one of the heads on which further imformation was considered desirable, was fire-proof construction, its best examples and their cost.

With the view of adding some little information under the above head, I have noted down some of the many fire-proof inventions, in the hope that in the valuable researches that are now being made by men of ability into the best means of improving the condition of the poorer classes of the population through the salubrity and cheerfulness of their dwellings, the increased danger necessarily attending the aggregation of several families under one roof may claim that share of their attentive consideration which is commensurate with its importance, as most of the improved buildings are now erected with wooden joists and floors, and some with even wooden stairs, built, as stated in an article of the *Builder* of June 7, 1845, and again, November 4, 1848, "as if to burn;"—"houses so arranged that if once on fire there is little chance of staying its progress; being, in fact, a mere bundle of sticks piled up;"—and also, quoting from a pamphlet written in 1775, "that among a society of men so sensible, so learned, and ingenious, there never was a single idea or the plan of an hour's thought adapted to secure the building or family, who were continually surrounded by and living in the middle of combustible wood, from falling a sacrifice to the most trifling accidents of fire; which building and family lieth every night in the year at the mercy of a drunken fellow with the snuff of a candle, a handful of shavings lying in a bye corner, a little thoughtless boy and girl, or a sleepy servant-maid drying linen at the kitchen fire; besides many malicious accidents, to be entirely burnt down and consumed before the morning. Many people wonder that a strong-built house should be so easily consumed; but this wonder ceases when they consider that everything about us is liable to catch fire: our houses are floored, our rooms partitioned, and the roof covered, with fir, a wood full of turpentine, and enriched with two or three coats of painting in oil, besides all our furniture, naturally made of wood, without the least material or contrivance to check the fury of fire, or prevent its rapid progress.

The Building Act merely deals with "Dwelling-houses for separate families containing more than 125,000 cubic feet," which it compels to have fire-proof stairs and landings, and with rooms tenanted by different persons if contained in a building exceeding 3,600 square feet in area, where they are to be divided so far as they adjoin vertically by party walls, and so far as they adjoin horizontally by party arches or fire-proof floors; and although large buildings can be erected without either fire-proof stairs or floors, yet even these two sections are avoided by erecting one building in separate blocks, as was done by Mr. Gibbs, near Victoria-street, and by Alderman Waterlow, in Finsbury. In both of these buildings wood joists and floors have been employed. In all the buildings erected by the Labourers' Friend Society under Mr. Henry Roberts's superintendence, hollow brick arch floors have been used; and in the Portpool-lane buildings this plan has been put to a severe test, as will be seen by the following extract from the *Builder*:—

"Few of the large fires which have lately happened in the metropolis have been so extensive and rapidly destructive as that which has occurred in Portpool-lane; and an examination of the ruins shows the great danger which there is in keeping such immense stores of combustible materials in the centre of a dense population, as are often found.

"Nothing could be more complete than the destruction which in a very short time took place over a large area. On the west side of the area of the fire are the 'Thanksgiving' Model Lodging Houses; on the north, Reid & Co.'s immense brewery; on the south are closely-packed ranges of poor dwellings, every room of which is thickly inhabited; on the east there are houses of a similar class. Fortunately, on all sides, except that on which the model houses stand, there was a considerable extent of walls, without openings, exposed to the raging of the fire.

The Portpool-lane model buildings are fire-proof. The rooms are arched with brickwork; the stairs and railings of slate, stone, and iron; the window-frames were of wood, but these the firemen cut away with their axes. The roof has been partly burnt, and if this building had been constructed on the usual plan, there is little doubt but that it would have been destroyed, for the flames rushed in at the windows, and swept along the ceilings of the rooms. The inmates have been put to inconvenience, but their furniture has not been injured by the fire. In other directions the poor people have suffered, and, what is much to be lamented, thirty-six joiners have lost their tools, which, we are told, on the average, were worth about 30*l.* to each man. In this way 1,080*l.* have been lost, and the calamity will deprive most of these men of the means of providing for their families, for we hear that few had thought of insuring the property on which themselves, wives, and children so materially depended."

It must be universally admitted that to secure comparative immunity from fire in ordinary dwelling-houses is a great desideratum, where even the resident is afforded the security of party walls and parapets of fire-proof material, guarding him from the carelessness of a neighbour. Of how much more importance, then, must it be where no such security exists, with a neighbour above and a neighbour below, all under the same roof, divided by floor joists and boarding of timber, and in some cases with wood stairs. A fire in such a building must inevitably involve a whole number of families in one common disaster.

But not only for this chief reason, the security to life and limb, ought the dwellings of the poor to be rendered incombustible. They should all be sound proof, in order to avoid the annoyance of the noise made by children, and the heavy tramp of the adult over head, wearying and disquieting at all times, but becoming intolerable in time of sickness. The solid incombustible material which would form an effectual barrier against the progress of fire, from its nature is equally a non-conductor of sound, and as perfectly isolates the tenant of one room from the rooms above and below him, as if he were living in an independent tenement.

Another, and not unimportant advantage, is secured by this method of construction. The floors are almost wet proof, and the upsetting of a tub of water does not affect the inmates below. A third advantage is, that all these constructions form no harbour for vermin.

Before proceeding to notice the several systems in existence, it will be well, for the sake of clearness, to classify the different modes of fire-proof construction under two heads, viz., brick, and concrete and iron. Commencing with brick, the most simple system is the half-brick arch. This has been employed at the model dwellings at Birkenhead. The arches were tied together with iron tiles, and abutted in the centre on an iron beam: the spaces between the upper surface of the arches and the spandrel were filled in with concrete, on which flat tiles were imbedded. The arches were 7 ft. span, with a rise of 7 in., forming a thickness at the crown of 13 in. The cost of this system would, including iron girders and tile floor, be about 5*l.* per square; if boarded, and the underside made flat and lath and plastered, 7*l.* 10s. to 8*l.*

Hollow Bricks.

Mr. H. Roberts, in erecting the model dwellings at Streatham-street and Portpool-lane, used hollow bricks, slightly wedge-shaped, 6 in. deep, 4 in. wide at top, 9 in. long, and 1 in. thick, the rise of the arch being ¾-in. to 1 in. to a foot span, set in Portland cement, in the proportion of one part of cement to two parts of sand, the bricks being wetted before use. The weight of the arch was 37 lb. to the foot superficial, and when levelled up with concrete 70 lb. Each arch formed the abutment to the other, except at the extremities, where they were tied in with ⅞-in. iron rods, secured to cast-iron springers. Mr. Roberts gives the extra cost of the brick arches at 12s. per cent. on the contract of 7,370*l.*, which would be about 1*l.* per tenement, or 5s. per square.

On an experiment as to the strength of these arches, it was found that one of the 9-ft. 6-in. span (calculating the greatest weight that could ever be placed on such a floor, if covered with people, at the rate of, 20 lb. per foot superficial), would bear safely four times the weight, and broke down with six times.

Further particulars as to these arches are given in the "Essay on Dwellings for the Labouring Classes," by Mr. Roberts.

Mr. Bunnett has also patented a system of hollow-brick floors, the bricks joggled at the sides, so that when laid and tied by iron rods, they lock together, each brick being in contact with and supported by the six adjoining bricks. This form of flooring has been used at the Grosvenor Hotel and the London and Brighton Railway Station, Pimlico, and can be inspected at Mr. Bunnett's factory, at New Cross. Specimens and drawings can also be seen at the South Kensington Museum, 46m. and 57z., class Building Materials. Mr. Bunnett gives the cost as follows, ready for the reception of floor-boards and plastering to ceiling:—

	Per square of 100 ft. super. £	s.	d.
18 × 13·6	4	0	4
16 × 13·0	3	18	8
15 × 12·6	3	18	6
14 × 10·0	3	4	8
12 × 12·0	3	8	6

Mr. Warren has also a system of flooring of hollow brick. Specimens may be seen at the South Kensington Museum, 45m. and 56z., class Building Materials.

Various other methods with brick and tile have been adopted; and for small spans flat tiles in cement, with iron bonds have been successfully employed, and flat arches of tiles are used in Italy in the South of France; but these require thick walls, to resist the thrust of the arch. Anything out of the common way, however, is almost sure to be costly, on account of the difficulty of finding men to execute the work, and the care and trouble it gives the builder, who consequently charges a high rate, not knowing with certainty what it will cost him to execute.

Among the many systems of the combination of iron joists and concrete, I will commence with that most commonly employed.

Fox & Barrett's System.

The principle adopted in carrying out this system of flooring, is the substitution of wrought or rolled iron joists for the ordinary timber joists, placed about 2 ft. apart, and filled in between with concrete on wood slips. The surface of the floor can either be furnished with the ordinary boarding, or with cement, tile, slate, stone, or other material: the ceiling can be either finished by plastering to the strips that support the concrete, or by fillets secured to the strips and lath-and-plastered. Any required degree of strength is obtained by increased depth of joists and concrete. This system is well known, having been in use for a number of years at most of the new banks, hospitals, hotels, railway stations, private houses, and many of the model dwellings.

The cost of the rolled iron joists is nearly as follows:—

	£	s.	d.	
8 ft. bearing, about	2	0	0	per square.
10 ,, ,,	2	10	0	,,
12 ,, ,,	3	5	0	,,
14 ,, ,,	4	0	0	,,
16 ,, ,,	4	18	0	,,
18 ,, ,,	5	10	0	,,
20 ,, ,,	6	8	0	,,

and from 3*l.* to 4*l.* 10s. extra can be reckoned for the floor and ceiling, depending upon the kind of finish adopted. Mention having been made of the failure of this system at the model Dwellings in New-street-mews, Dorset-square, in the report on the Statistics of Dwelling Improvements, on inquiries I find that the surface was finished with Portland cement, which material has, on experience, been shown to be most unreliable for such purpose, but was unfortunately used in many of the earlier buildings constructed on this principle. Asphalte or lead being the only material now recommended for covering the roofs, care must be taken not to have the ceilings plastered before the concrete is thoroughly dry, or else the ceiling will shell off, and give to the plastering much the same appearance as if mixed with sea-sand. Models of the system can be seen at Mr. Twining's Economic Museum at Twickenham, and at the South Kensington Museum (not numbered). The flooring of the picture galleries there is also constructed on this system.

Beardmore's System.

This floor is constructed of vertical plates of sheet-iron, with angle-iron riveted through at the top and bottom. These beams are then placed on the walls, about 2 ft. 6 in. apart, and plates are riveted to the bottom angle-irons and the space between filled in with concrete or earthen pipes and concrete. This form of construction was evolved by various experiments made by Mr. Fairbairn and Mr. Hodgkinson (reported in the *Builder*, vol. viii., page 101), who determined that the uniform presence of concrete against the whole surface of the web and under the top flanges of the beam would produce the effect of a continuous strut, and thus enable comparatively thin plates to assume the true character of a beam or girder. Mr. Beardmore informs me that he never took any steps to procure his patent, on account of his professional engagements; consequently, I am not aware if it has been employed at any buildings. For large spans it offers great strength. The cost for 14-ft. spans would be about 5*l.* per square for the iron, and from 3*l.* to 4*l.* 10s. extra for the floor and ceiling. If placed 2 ft. apart, with wood strips, as in Fox & Barrett's system, the cost would be reduced to 3*l.* 10s. per square for the iron, the weight of each beam being about 1¼ cwt.

Nasmyth's Patent.

This is similar to Fox & Barrett's, only, in lieu of wood strips, iron plates are bent into the form of a segment of a circle, supported on chord or tension bars, which have the ends bent upwards to retain the plates in their curved position when subjected to pressure.

Cheyne's Patent.

Is also similar to Fox & Barrett's, only, in lieu of wood strips, corrugated iron plates are bolted to the lower flange of the iron joists. Drawings of this patent may be seen at Mr. Twining's Economic Museum, at Twickenham.

The French Systems.

M. Thuase and M. Creuzot employ rolled iron joists, of a slightly arched shape, placed at a distance of 3 ft. 3 in. from centre to centre, and connected at intervals of 3 ft. 3 in. throughout their length by ties of flat bar iron on edge resting on the lower flange of the girder, and fastened one to another either by wrought-iron straps or cast-iron chairs: upon these ties are placed square bars, three between each pair of girders, running parallel to them from wall to wall, into which their ends are turned down and built in. On the iron framework the thick plaster ceiling is formed by a wood platform being placed under, whilst the plaster is thrown from above, the former being removed after the latter has firmly set.

In another method the iron joists are strutted at intervals of 1 ft., by square bars, resting on the flange, and having their ends turned up to the height of the web of the girder.

In a third method, the girders are tied together in pairs at 3 ft. intervals by round iron bolts, nutted at each end. Small square bars are hung on to these tie-bars, three between each joist.

All these methods can be seen in model at the South Kensington Museum, 24, 25, and 26 J. Building Materials, as well as others by M. Bleuze, M. Zorés, and others, which are fully described in the catalogue, and in the *Builder*, vol. xii., pp. 29, 95, and 150.

The following are the prices of M. Thuase's system:—

Bearings.	Depth of joist.	Depth of floor.	Weight per square	Price of iron work
ft. in. ft. in.	in.	in.	lb.	£ s. d.
10 0 to 11 6	4	7½	370	2 19 5
11 6 to 13 0	5	7½	422	3 18 5
13 0 to 16 0	5	8½	465	3 11 4
16 0 to 20 0	6½	9½	510	4 1 9
20 0 to 23 0	7½	10½	605	4 17 6

The Dennett Arch.

This name is given to a material composed, in part, with either sulphate or carbonate of lime, together with broken calcined cinders, bricks, and other porous material, formed in a soft state, on centreing, into arches of spans of from 5 to 10 ft., and in spaces where larger spans are required the width is divided by girders of wrought or cast iron. The abutments against the wall may either be formed with a cant brick slightly projecting, or laid into the walls. The thickness at the crown is from 2½ in. to 3 in., with a rise of about ¾ in. to the foot. The arch will either form a floor finished with a polished surface, or it may be left rough and paved with tiles, or have a boarded floor. The underside of the arch may be coloured, or ceiling joists introduced to form a flat ceiling. The material is stated to have been in use for the last ten years in the Midland Counties with great success, and it has been used in buildings that have settled considerably, without in any way causing a flaw

or crack in the arch.—The advantages of this material are its cheapness, viz., 60s. to 70s. per square, little or no skilled labour being required, and its extreme thinness (about 3 in.) at the crown, consequently reducing the weight on the walls. Not being able to speak of this material from any experience of my own, I cannot do better than quote from a testimonial by Mr. G. G. Scott, who says:—"I have made use of Messrs. Dennett & Co.'s material for fire-proof arching, and though I have, happily, had no practical experience of its efficiency against fire, I can bear witness to its strength and its extreme convenience of application. I have made use of it in positions in which I should have found it difficult to introduce any other fire-proof material; and it has this advantage; that the arches constructed of it are so entirely in one mass that they cover the space like a compact shell or inverted basin, and are, consequently, almost wholly free from lateral pressure." A specimen of the arch can be seen at the South Kensington Museum (No. 47 M., Building Materials), 5 ft. span, with a rise of 2½ in., 4¼ in. thick at the haunches, and 2½ in. at the crown. A similar specimen is stated to have carried a weight of 5 tons without injury.

Mr. Waterlow's System.

The floors of the landings and passages and the roof in Mr. Waterlow's buildings in Finsbury were composed of clinkers, culm, hard broken coke, and similar rough calcined substances in the proportion of four parts to one part of Portland cement, sufficient water being added to bring the composition to the consistency of ordinary mortar. Bars of 3 in. by ½ in. iron, are stretched edgewise across the building from front to back, at distances of 2 feet apart, and carried into the brickwork of the walls and crossed by ½-inch iron rods 2 feet apart, forming a network of iron with a mesh of 2 feet. A temporary scaffolding is then placed beneath, and the material thrown in to a thickness of 4 inches; in the course of time the whole mass sets with sufficient hardness to allow of the removal of the scaffolding. Mr. Allen, the builder of the houses, states that the floors can be erected for about 5*l.* per square. This construction is similar to the French system without their girders; and taking into consideration that the iron would hardly carry its own weight, that all depends upon the concrete forming one homogeneous mass, and that should any fracture occur the whole would fall, I do not think it is to be recommended.

Comparative Statements of the foregoing Descriptions of Fireproof Floors, per Square of 100 ft. superficial, for a Span of 11 ft.

	Thickness of Floors in inches.	Cost. £ s. d.
Wood joists, inch boards, and lath and plaster	11	4 8 6
Same if pugged	—	5 8 6
Brick arch, 4½-in. thick iron girder, use of centreing, and levelled up for tiles	13 & 27	4 15 0
Same if boarded, and the underside levelled, and lath plastered	24	7 0 0
Hollow brick arches. Cost depends upon the price of bricks, which would have to be made specially.		
Fox & Barrett's, with a cement surface	9	5 18 0
Same if boarded	11	7 3 0
Beardmore's boarded surface	11	8 5 0
French systems, about the same as Fox & Barrett's.		
Dennett arch	13 & 3	3 10 0
If tiled	14 & 4	5 0 0
If boarded, and the undersides levelled and plastered	15	7 10 0

The thickness of the floor ought to be taken into consideration, as it increases or diminishes the height of the building. For instance, a building of five stories with brick arches and boarded floor, would require the building to be 5 ft. 5 in. higher than another with Fox & Barrett's system, which, in a building of the size of the Streatham-street Model Lodging-houses, would be about 12 rods, or about 144*l.*

New Public Park for Liverpool.—At the Liverpool Council meeting last week, a special committee appointed to consider the question of providing parks at the north end of the town submitted a report, in which they recommend the purchase of Woodlands and Walton Lodge estates, comprising an area of rather more than 30 acres, at a cost of about 34,000*l.* In order to secure the land in question, it was agreed to recommend the finance committee to purchase it as an investment of capital.

SOME HEALTH MATTERS AT THE BATH MEETING.

In the section of Economic Science (British Association), Mr. B. Middleton read a paper "On the Sanitary Statistics of *Salisbury*," from which it appeared that the death-rate in 1775 was 30 in 1,000. After 1850 the city was placed under the Public Health Act, and a sum of 27,000*l.* was expended in drainage. For nine years previously to the drainage the average of the death-rate was 27 in 1,000, and for the nine years after the drainage it was 13 in 1,000, or about one-half. For the Close of Salisbury the average death-rate for the same period, before drainage, was 20 in 1,000; and, since drainage, 13 in 1,000. The deaths by consumption for seven years before drainage were 286, and for seven years since only 143. For the last year, 1863, the deaths by consumption were only 11, or 1 in 818 of the population, while for the whole kingdom the deaths by consumption were 1 in 376.

Dr. J. A. Symonds read a paper on the "Sanitary Statistics of *Clifton*." He said,—One of the objects of his paper was to illustrate the importance of explaining statistical figures by statements in words. On the 6th of August last, a severe shock was inflicted on the sanitary sensibilities of Clifton. The figures of the Registrar-General's report were as plain as the Mene Mene on the walls of Babylon, and yet as much in need of interpretation. 24 in 1,000 was the annual rate of mortality in Clifton. The Isle of Wight had only to answer for 15 in 1,000; Newton Abbott, including Torquay, for 16; Cheltenham for 17. 'Why,' asked the Registrar-General, with Rhadamanthian severity, 'is the mortality of Clifton 24 in 1,000?' And the terrible question was asked about Clifton as one of the watering-places. The question would be startling enough to one who had taken but a superficial view of Clifton as to its crescents and terraces, and broad avenues running along or just below an elevated ridge of mountain limestone, and abutting on breezy downs, and resting on a soil which in its nature and inclination is singularly unfavourable to the retention of moisture. The question was still more startling to one who observed how large a proportion of houses must belong to persons in possession of the comforts and luxuries of life, and of the means of preserving health; not less startling to one who knew that a thorough system of public sewage had been completed, and at no small cost to the community. But the surprise of the numerical statement alluded to subsided when it was explained that Clifton, in the Registrar General's Report, did not mean merely the place which he had just glanced at, but Clifton, the watering-place, together with a very destitute district in the parish, and also with a poor-law district, including five other sub-districts, scattered at considerable intervals over an area of 27,199 acres, in some parts densely crowded with the poorest of houses and inmates (a large portion not to be surpassed in their destitution by the tenants of the closest and dirtiest quarters of an over-peopled commercial city or sea-port), those sub-districts making up a population that was almost quintuple the population of Clifton proper. The doctor proceeded to point out the injustice of estimating the rate of mortality in the Clifton union, and publishing it as the rate of mortality of Clifton the watering-place. He pointed out the character of the various parishes which were included in the parish of Clifton, referring to the crowded nature of the dwellings in the out-parish of St. Philip and Jacob, of the existence in the parish of Stapleton of the Clifton Union Workhouse, the Bristol workhouse, and the Bristol Lunatic Asylum; and Dr. Symonds urged that it was unfair to associate the watering-place of Clifton with such districts as those to which he had referred.

Mr. R. T. Gore read a paper "On the Mortality of Bath." The population of Bath, based on the census of 1861, was 52,500, and the mortality for the year ending June 30, 1864, was 1,350, showing a rate of mortality of 25·714 in 1,000—varying from 17·28 in the Bathwick district to 57·09 in the Abbey district. Of the total deaths there were—under 10 years, 41·65 per cent.; from 10 to 60, 29·25 per cent.; from 60 to 100, 28·82 per cent. In the surrounding country districts, with a population of 15,808, the rate of mortality was 20·93; there being, under 10 years, 47·9 per cent.; 10 to 60, 22 per cent.; and 60 to 100, 30 per cent. This statement made by the Registrar-General as to the high death-rate in Bath, had had its effect on the corporation of Bath in taking measures to get rid of the cesspools and other nuisances.

In the same section, Dr. Wilson read a paper "On the Sanitary Statistics of *Cheltenham*." It appeared that within the last ten years the death-rate had varied from 16 to 22 in 1,000.

Dr. Wright, of Cheltenham, pointed out the great advantage that had been derived in some of the lower districts of the town since a better system of drainage had been introduced.

Mr. Field said the population of Bath, by the last census, was nearly 1,000 less than it was in 1841. The rate of mortality in June, 1843, was but little more than 21 in 1,000, but he regretted to find it was now 25·7. He reminded the section, however, how very cautious they should be in drawing inferences from figures, unless they were accompanied with an explanatory statement by which they might correct any error. The speaker went into a comparison of calculations which he had made, which appeared to bring the matter pretty much to what was stated in the paper; and, in conclusion, he called attention to the imperfect drainage of Bath, and the mode by which it was proposed to drain the beautiful villas which were now being built on the Lansdown Hills, and the effect it was likely to have on the springs in that locality.

Mr. Tite, M.P., said, the fact of the high rate of mortality for Bath, as shown by the Registrar-General's return, had had that effect in Bath for which it was meant, and the corporation had turned their attention to a proper system of drainage and of water supply. Experience showed that when they were properly and effectually carried out, a diminished death-rate was the consequence. At the Chemical Section, on the previous day, he endeavoured to show its importance, but he was astonished to hear it gravely asserted there, by a medical gentleman of Leith, that, in truth, a bad smell was no indication of a bad state of things, as regarded individual health; that cesspools were the right system of drainage; and that we ought to return to it because sewage was so valuable. He hoped, however, that the people of Bath would not be turned aside from their present good intentions by any such authorisation. The health of the inhabitants was more valuable than the sewage, and there could not be a greater mistake than the cesspool system, and the sooner it was got rid of the better.

Dr. Farr said the Registrar-General asked why the Clifton death-rate was so high in Clifton Union, in order to get an answer, and that had now been given by Dr. Symonds. The people of this country were in the habit annually of leaving their homes for the various watering-places, both in England and on the Continent, many of the latter being much less healthy than our own watering-places; and in consequence of some lamentable deaths which took place, the Registrar-General was urged to show, if possible, the mortality of the English watering-places, and the consequence was, that it had to be hastily compiled. These places were not over-desirous of furnishing any information relative to the prevalence of any epidemic. Clifton had given a good explanation of the high rate of mortality set opposite to its name in the Registrar-General's return. We were, however, all more or less connected together: and it was impossible for the wealthy people of Clifton to disconnect themselves from the low and wretched population surrounding them and the epidemics which visited them. It was impossible for the rich to isolate themselves from the poor, and the health of all were bound up together. The Registrar-General, in his return, gave his information for the quarter, which he received from the local registrars. He also gives his information yearly, and, again, he will give it at the end of ten years, from which latter date the public would be able to judge of the mortality of the country for a number of years.

On another occasion the injurious views expressed by Professor Bennett, of Edinburgh, who denied that the fermentation, exposure, and smell of sewage were unhealthy, were further combated. Dr. Lloyd, of Bath, opposed them. It had been proved that the smell of sewage was noxious, and in the district near the river in Bath he had long noticed that amongst those who resided there, first came degradation, then ill-health, and then premature death.

Captain Galton said he knew numerous instances of disease from the state of the river Thames.

THE LATE MR. HEAVISIDE, ENGRAVER.

It is with regret we announce the death of Mr. John Smith Heaviside, with whose name our readers will be familiar as a wood engraver, his works having appeared in this journal from time to time over a course of many years. He died on the 3rd instant, in his fifty-third year, at his residence in Kentish Town-road, of tubercular disease of the lungs, after what may be termed but a short illness. He was the second son of Mr. Thomas Heaviside, of Stockton-upon-Tees, builder, and the eldest of three sons of that gentleman who adopted the profession of wood-engraving, all of whom were originally devoted to different pursuits. His next youngest brother, Mr. Thomas Heaviside, was the first to enter the profession, he being one of the earliest pupils of the elder Bonner; and it was by his younger brother that the subject of our notice was initiated into the art,—not until, however, he had attained the age of twenty-six years. After working for some time in London, Mr. Heaviside entered into an engagement with Mr. O. Jewitt, of Oxford, and ultimately embarked in business at that city, in partnership with Mr. Philip Delamotte. Most archæological students will be familiar with the engravings produced by this firm for Mr. Parker's works connected with architecture. Architectural subjects were always Mr. Heaviside's preference and specialty; indeed, his experience as a young man in his father's business rendered him peculiarly fitted for this sort of illustration. It is but two weeks since we published a "cut" of his, part of which was the work of his own hands: thus he may be said to have died in harness.

THE THAMES BANKS.

The fact that much of the neighbourhood of London is, like Holland, dependent on its dykes for safety, is so little known, that recent remarks with reference to the injury happily escaped at Belvedere, took most people by surprise.

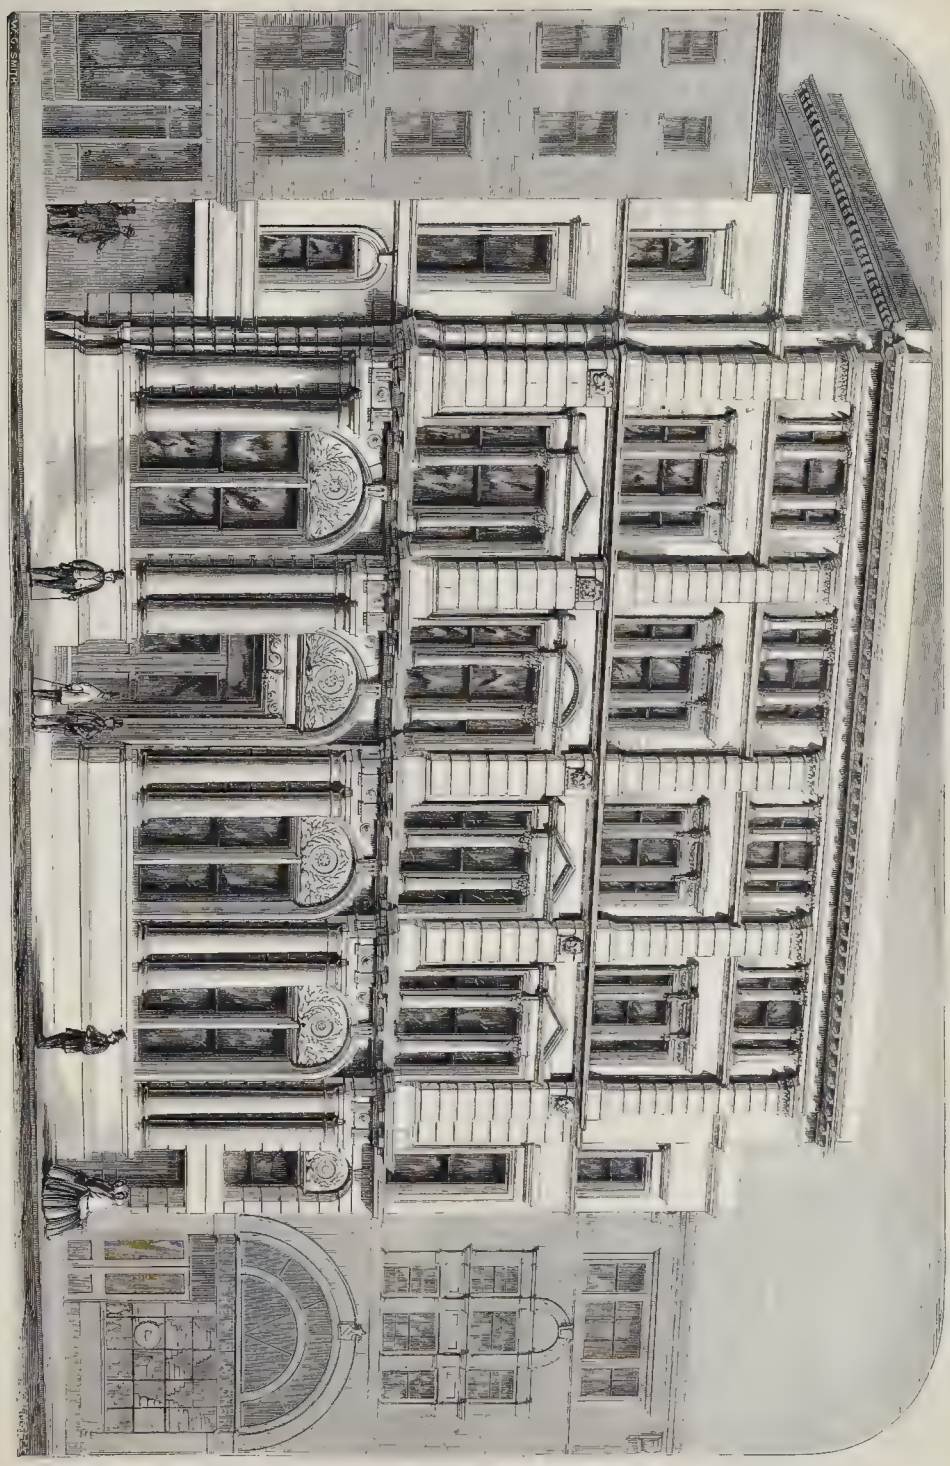
Notwithstanding that the subject has been treated of at considerable length in different volumes of the *Builder*, and that our account of the recent breach has been widely perused, we think fit to place before our readers, in order that the danger contingent upon a breach may be understood, a sketch which represents what is the general state of the marshes and the river, relatively to one another, and not at the highest level of an average tide. The sketch was taken on the Essex side of the river; but it will equally apply to that side on which the explosion occurred.

It appears that in addition to the favourable circumstances mentioned by us, without which the breach could not have been filled up, and the tide stemmed back as it was, there was the circumstance of an unusually low level of the high-water,—although there were spring-tides at the time. On the 31st of December, 1863, the tide had risen quite 2 ft. 6 in. higher, as registered at the sewerage works: and it is felt by those who directed the works of reparation on the 1st of this month, the day of the calamity, that had the tide on that day been an extreme one, the extra 2 ft. or more would have placed the matter in a still more serious aspect than that in which it was. Everything happened to be in favour of speedy repair,—time, energy of individuals, materials, and every circumstance of wind and tides. But to show we have not been taking too serious a view of the point of the general condition of the banks of the Thames, we may mention that on the date already given as that on which the tide was registered at Crossness,—and when, we may say, the registered level, 15·08 ft. above Ordnance datum, was considerably above that of the Trinity High-water datum,—every time a swell was caused either by steamers passing near the bank, to the west of the works, or by wind, the water went over into the marsh. Mr. Houghton then made up the footpath near to the works, but not on the land of the Metropolitan Board, some 6 in., as a temporary measure, and drew the attention of the Commissioners, and of the Engineers at Woolwich, to the matter.

It appears that the length of the breach, as correctly ascertained, was 120 feet, measured on the footpath. Mr. Webster's men arrived at about 10 minutes to 9 o'clock, a quarter of an hour after the hour of low-water,—the explosion having occurred at 20 minutes to 7. There were 800 of Mr. Webster's men; but only 450 were set to work, the rest being bricklayers, masons, carpenters, and smiths. The military arrived about a quarter to 11.

About 130 of Mr. Webster's men, besides 20 of the Commissioners', were employed to the end of last week, making up the bank with clay punned in layers, as a counterfort to the weight of water, as well as placing stones on the river-face. The bank on the land-side is being formed of a greater width than it originally was: the top or footpath being now about 15 ft. instead of 5 ft.

THE THAMES EMBANKMENT IN THE ESSEX MARSH.



MESSRS. BARCLAY & CO.'S PREMISES, LOMBARD STREET.

Amongst the new buildings now progressing in Lombard-street, to which we have recently pointed, is the new stone-fronted Bank for Messrs. Barclay, Bevan, Tritton, & Co. A view of this building, which is being erected from the designs of Mr. P. C. Hardwick, we have engraved. It occupies a site of 85 ft. frontage on the north side of the street (besides the gateway, which is covered over above the level of the ground floor), and is about 88 ft. deep. The whole of the front part of the office will be devoted to the ordinary business of the bank,—the pay and receive counters, the country office and ledger office being all kept distinct; though, of course, with ready means of communication. Opposite the entrance-door, at the extreme end of the office, will be the principal clerk's office, behind which is a large safe. Near this are the partners' private room, waiting-room, &c. The basement is devoted to strong rooms of considerable size,—rooms for the account-books, and so on.

The first and second floors of that part of the building which fronts Lombard-street will be let. To these there is an entrance from Lombard-street, distinct from the entrance to the bank. The rest of the upper part of the house will be occupied by the principal clerk.

The exterior of this building is arranged with a view to show clearly the object for which it is built. For this purpose the greatest importance and dignity possible are given to the ground floor, which is 22 ft. in height inside. The windows lighting the bank are 12 ft. wide, divided by a mullion. The entrance-door, the jambs of which will be of red granite, will be 7 ft. wide and 14 ft. high. The upper parts of the front are comparatively small from the necessarily lower height of the stories; but the main piers are carried up to the principal cornice at the top of the building, so as to give unity to the whole composition.

In our next we shall refer at some length to the works in Lombard-street generally.

MESSRS. BARCLAY & BEVAN'S BANK, LOMBARD STREET, LONDON.—Mr. P. C. Hardwick, Architect.

STONEHENGE.

During the Bath Congress of the British Association parties of the members visited various buildings and antiquities in the neighbourhood, and listened to papers describing them. Bath Abbey Church, Bristol Cathedral, the Church of St. Mary Redcliff, Wilton Church, and Stonehenge were thus examined. At the last-named, standing on a fallen stone in the inner circle, the Rev. Prebendary Scarth, of Bath, read a paper "On Stonehenge: its Mechanical Construction and probable Uses." He said:—The monument under our eyes at present, I need hardly tell you, is one of the most remarkable in this island, and perhaps I may say in any part of the world. The magnitude of its dimensions, the peculiarity of its position, the obscurity that surrounds its history, and the purpose for which it was reared, render it one of the wonders of our land. Happily, in modern times the indifference with which such structures were once regarded has passed away, and the day has arrived when some of the greatest minds in our country are directed to investigating the purposes, or recording the history, of remains of which our island has justly been proud; and this has been the case with the monument now before us. Acute and discerning scholars, as well as careful antiquaries, have turned their attention to it, and brought both learning and research to bear upon the investigation; and here I feel that I ought to apologise for taking the place of men more learned and better qualified than myself to treat of such monuments, and to state that it has been only in consequence of others declining to do the work in which I am now engaged, that, after solicitation, I have ventured to stand before so learned and so noble an assembly. But that I waste no further time in excuses, and boldly cast myself upon the lenient judgment of my audience (the more learned and wise ever the more tender in judging), I shall proceed to treat of the wonderful monument now before us. And first, as to its structure, you will perceive, on examination of the plan of its construction, that it consists of two circles and two ovals, the two latter (says Hoare) constituting the cell or sanctum. The outer circle is composed of upright stones, originally thirty in number, and on their tops the same number of stones is placed in a horizontal position, so as to form a continuous architrave. The outer circle may, therefore, be likened to a crown. These horizontal stones, which rest upon the uprights, are fixed in this position by a system of mortise and tenon joints. This feature is supposed to be peculiar at Stonehenge. Within the outermost circle, is a second of forty stones of rude form, and much less elevation. Within this again is an oval, consisting of five trilithons, each of which is composed of three very large stones, two being upright, and the third placed upon them horizontally. The weight of each trilithon is estimated at about 70 tons, the impost alone about 11 tons, and set 3 ft. 6 in. deep in the ground. These are held together by the same process of mortise and tenon. The height of the outermost circle of stones is about 13 ft.; but the first pair of trilithons is upwards of 16 ft. high, according to the measurement of Dr. Thurnam, who has illustrated and described this monument with his usual care, ability, and accuracy. The second pair of trilithons is about 17 ft. high, and the great trilithon facing the entrance, one of the stones of which, as you see, has fallen, was 21 ft. 6 in. in height. Within this oval of large trilithons is a second and lesser oval, formed of nineteen stones of ruder construction. The stone commonly called the "Altar Stone" is placed on the earth in front of the great trilithon, and measures about 16 ft. in length by 4 ft. in breadth. An avenue of stones has led up to these circles, and in this avenue by which the structure is approached, at about 200 ft. distant from the outer circle, is an isolated unhewn stone, apparently intended to direct observation, at the Summer Solstice, to the point of the rising sun. The truth of this was tested by Dr. Thurnam himself, at Midsummer, 1858, when he ascertained, from personal observation, that from the stone known as the altar stone, the sun at Midsummer is seen to rise precisely over this stone in the avenue; and from this he infers that the structure in which we now stand was a temple connected with solar worship. The geological character of the stones of this vast structure has occupied the attention of men well calculated to form a correct opinion of their nature; and indeed this learned assembly can this day examine this point for itself. It is, nevertheless, needful first to state that the outer circle and the five trilithons of the outer oval are of sarsen stone, like the grey wethers, which are found in abundance in North Wilts, and have probably been brought from the Vale of Pewsey. They are said to be composed of silicious grit, which is peculiarly compact and hard in its nature, and very difficult to work, as it resists the action of tools, and will split rather than work; and it has, therefore, been supposed that the mortise and tenons have been formed, first by chipping, and then by rubbing the stones with sand and water, and using stone mullers. Considering the rude implements of iron or bronze which the probable builders of Stonehenge must have possessed, this theory does not, to me, appear improbable. The nineteen stones composing the inner oval, and the forty stones of the inner circle, which are less finished in form (though they have been more or less hewn and worked), are composed of igneous rocks, none of which are found within a distance of 100 miles from the spot where they now stand. These stones are composed of Syenite or greenstone, which are not found nearer than Dartmoor or North Wales. I believe it is the opinion generally entertained that these stones were brought from North Wales, and this (as Dr. Thurnam states) may have given rise to the fable related by Geoffrey of Monmouth, that the stones were brought by the magician Merlin from Ireland. There are two opinions respecting the period at which the different series of stones were set up. By some it is thought that the outer circle and the outer oval existed before the smaller stones of the inner circle and inner oval were placed,—by others that the smaller stones were first erected; but if any inference as to the contemporaneous date of the whole structure may be drawn from the chippings of the various kinds of stones of which it is composed being found mixed together at the bases of the stones, and in the adjacent barrows, we are led to assign one date to the whole. What that date may be we are now concerned to inquire. The first author who makes mention of Stonehenge is Henry of Huntingdon, who wrote at the commencement of the twelfth century. He speaks of it as the second wonder of England, and calls it Stanhenges. Geoffrey of Monmouth, who wrote at the same time, declares it to have been a monument erected in the reign of Aurelius Ambrosius, King of Britain, in order to commemorate the slaughter of the Britons by Hengist, and hence the etymology which has sometimes been assigned to it of "Hengist's Stones;" but the true etymological explanation of Stanhenges seems to be (A. S. Stan, used as an adjective, and henge, from A. S. hon), *i.e.*, stone hanging-places, from the stones resembling a gallows. This is the opinion of two eminent Saxon scholars. The name given to it, therefore, by the Saxons evidently shows that it was not set up by that people, who would hardly have bestowed such a title on a work emanating from themselves, and it is no doubt much anterior to the coming of the Saxons. But if Stonehenge was erected anterior to the coming of the Saxons, can we refer the construction to Roman times? We know sufficient of the Roman conquerers of this island to assert boldly that such an edifice cannot be attributed to that people. It was totally foreign to their genius; but to them we may look for some notice of it, or some mention of the manners and customs of the people by whom it was probably erected. Although we have no notice by any Roman writer yet known of any such erection, yet we have notices of the manners and customs of the nations conquered by them, and we have full accounts of the manners and customs of the Gauls and Celtic tribes. From the Romans we know that the Britons, like the Celts of the Continent, were without inclosed temples; but they had groves and sacred places in which they offered sacrifices. They had *loci consecrati*, in which treasures were deposited, the places being dedicated to the divinity, or divinities, supposed to preside over them. Julius Cæsar plundered these sacred spots, and obtained therefrom immense wealth. A.D. 106 Cœpio obtained great booty from gold and silver which had been deposited in certain shrines and sacred lakes. The old Celtic name for a consecrated spot was "nemet." Megalithic circles were in use in early times, both as places of assembly and for sacred rites, before the construction of temples. It is hardly to be doubted that the large stone circles of these islands were the places of assembly and hypæthral temples of the ancient Britons. In Scotland there appears to have been a general tradition that they were places of sacrifice in heathen times. The Gaelic name of "clachan" is equally applicable to a church. They have also the name of law-stones; and there is documentary evidence that as late as the fourteenth century they were used for holding courts of justice. In France, stone monuments seem to have been sedulously destroyed; but they are abundant in Brittany. In our own island they are found in all parts, from the Scilly Isles to the Orkneys, and are always circular in form, and usually surrounded by an earthwork, consisting of a foss and vallum, the vallum being on the outside. The following are the more important stone circles:—Roscawen and Dance Maine, Cornwall; Scorhill and the Grey Wethers, Devon, district of the Damononii; Stanton Drew and Stonehenge, country of the Belgæ. The diameters of the stone circles vary from 60 ft. to 366 ft., and even to 1,200 ft., which is the diameter of the great circle at Abury. The more usual diameter, according to Dr. Thurnam, is about 100 ft., which is that of Stonehenge. The stones which form them are of complete numbers, and seem to have some significance, as 12, 30, 60, 100, by which there has been supposed to be a reference to the lunar year and its divisions, the signs of the zodiac, the 12 months of 30 days and nights. The two inner circles at Abury, the outer circles of uprights and transoms at Stonehenge, the large circle at Stanton Drew, and the circle at Arbor Lowe, are each of 30 stones; those of Rollrich and Stennis of 60; and the large enclosing circle of Abury of 100 stones. These statements, taken from the "Crania Britannica," are, I believe, pretty accurate; but perhaps in one or two cases they may be doubtful. Some of the sacred circles were approached by avenues formed of parallel rows of stones, and are of considerable dimensions, and rectilinear, as at Classernish, Merrivale, and Scorhill. That of Snap was of a large size, and is said to be traceable for two miles. The avenue is traceable at Abury, and most striking at Carnac in Brittany. Abury and Stonehenge are the most remarkable consecrated sites in Britain: both are in Wilts, and are conjectured to have been sites of national congress, where the chiefs and people met the Druids for the settlement of disputes, and the administration of justice. Abury was, probably, in the district of the Dobuni, and is formed of unhewn stones. One of the avenues by which it is approached is a mile and a half in length, yet there is no appearance of the use of implements of metal in this vast structure. Stonehenge is different: it is formed partially of hewn and squared stones. The columnar uprights are connected with a continuous transom or architrave, and by a system of mortise and tenon joints. By the writer of the account of Stonehenge in the "Crania Britannica," the erection is supposed to have been at the period of "bronze and iron transition," *i.e.*, when the age of the use of bronze was passing into that when iron became common. I confess I am not a convert to the system which divides the period of the world's history into eras marked by the use of distinctive metals. It is doubtful if these metals can be shown to have been used in distinct periods, but I certainly agree with the writers of that very learned work, when they assert that it is very probable that when the Belgæ settled in this part of Britain they established a "*locus consecratus*" within the limits of their own territory, of which Wansdike appears to have been the boundary. That Stonehenge is more recent than Abury there can be but little doubt, and it would have been well if this learned congress could have visited that noble monument of a primitive British race, as well as that now under our eyes, and formed some definite idea of the respective periods of the two structures; but it is believed that we are not far from the truth when we suppose Abury to have been the work of an older race, and to have been the place of meeting of confederate tribes of the primæval inhabitants of the island; while Stonehenge is the work of a more recent people, an intrusive race, of similar habits, manners, customs, and creed. That this people were the Belgæ seems probable, and that the period assigned to its erection by learned and competent antiquaries, as the second century prior to the Christian era, is probably correct. This notice of so remarkable a monument would not be complete without making mention of the markings which have been found on one of the trilithons. An intelligent observer, Dr. George Tate, of the Royal Artillery, visited Stonehenge in February, 1861, his object being to search for inscriptions or sculpturing on the

stones, and he succeeded in discovering a symbol, a character on the under-surface of the fallen impost of one of the great triliths of the inner circle. This marking you will have an opportunity of examining. It consists of a hooked figure, bent at both extremities, 7 in. long, having the letters L. V., almost within the upper bend. A representation of it will be found in the nineteenth volume of the *Archæological Journal*, from a careful drawing by Dr. Thurnam. There is not any similar marking on the trilithon which fell in 1797. It has been suggested that the markings may have been cut by a casual visitor to the spot, possibly soon after the fall of the stones, and much time must have been spent in the work; but an argument may be drawn for a more remote antiquity, both from the quantity of lichen which covered the incisions, and had kept them from notice, and the improbability that characters could have been so carefully cut by any casual visitor. A practical observation, in conclusion, may not be here out of place. It will be noticed that two of the trilithons have fallen. The precise period of the fall of one is not recorded: it was prior to 1722, when Dr. Stukeley's views were taken: the other fell in January, 1797. An accurate account of the catastrophe appears in the *Archæologia*, vol. xiii. Would it be well, with permission of the owner, to replace one or more of the fallen trilithons? and could it be considered as interfering with the antiquarian interest of the monument if that trilithon, the fall of which is recorded, and which took place not seventy years since, were replaced in its true position. Again, if the centre of the enclosed area were excavated, with consent of the owner, under careful and judicious management, might not some trace be discovered of the true uses of the structure? Would there be found the ashes of former sacrificial fires? This would be the case if this monument had been applied to sacrificial purposes, or if any interments of the great and noble of the primitive inhabitants of the land had been made within its enclosure; but if none such should be discovered, we should hold fast to the inference that it was destined for public assemblies, religious or political, and councils of state. The engineering skill of modern times would soon effect the replacement of the trilithon, and the keen eye of the modern antiquary would soon detect traces of any particular purpose to which this sacred edifice had been put; and if the so-called altar-stone were raised and replaced, would it reveal anything beneath? We may apprehend not, and perhaps our labour and engineering skill would be fruitless; but investigation would be satisfied with having done her part, and a careful readjustment of its position would satisfy every lover of antiquity. If these suggestions are too bold, or out of place on this occasion, I humbly crave pardon of the assembly, and would further ask them kindly to forgive the length of this notice.

NEW INFECTION-WARDS, ALNWICK UNION WORKHOUSE.

The old Border town of Alnwick has lately been provided with an accommodation that, though still rare, no town should be without. We allude to infection-wards, or places in which persons suffering from contagious diseases can be nursed apart from other patients. An epidemic in a town has, before now, been traced to the instrumentality of one tramp. Bringing the seeds with him from the haunts he has left, he sickens at the workhouse of any town on his route, and being lodged with the usual inmates, several catch his disease, and those waiting upon them spread it without the walls. In such a case as this, if there had been accommodation in which to isolate this tramp, his case would have been a solitary one. Notwithstanding that Alnwick has been sewered, and that water has been laid on to it under the auspices of Mr. Rawlinson, and that it has been paved and periodically swept under the direction of the Board of Health, it has been subject, for successive seasons, to severe visitations of epidemic diseases. These can only be accounted for as the consequences of overcrowding of tenements, and in the absence of a place to which the first person in a family smitten with a contagious disease could be conveyed. Scarlet fever and small-pox have, in several instances, carried off three, four, and five in a room. Could the first person smitten have been removed from the midst of the other occupiers of the tenement, it is possible that the spread of the contagion might have been arrested. To this end the Alnwick Board of Guardians assented to the proposition of one of their body to erect infection-wards, detached from the workhouse infirmary. These have just been completed. The services of Mr. F. R. Wilson, architect, one of the guardians, were secured, and his plans being approved by the Poor-Law Board, London, two commodious wards, one for male patients, the other for female, eight beds in each, with two rooms for the nurses, were immediately erected adjacent to the workhouse hospital.

WORCESTER ARCHITECTURAL SOCIETY.

The eleventh annual meeting and excursion of this society recently took place. The members assembled at the Natural History rooms, Foregate-street, when the chair was taken by Sir Thomas Winnington, bart., M.P., who called upon Mr. J. S. Walker, one of the secretaries, to read the report for the past year. This document extended to great length. After reviewing the excursions and proceedings of the society for the past and present year, it proceeded to detail the new ecclesiastical works in progress or completed in the diocess, with critical comments thereon. The report was received and adopted, and the re-election of officers of the society and the appointment of a committee then took place, after which the party drove to Norton-juxta-Kempsey Church, the first on the programme for the day. At Norton church, the Rev. J. Jenkin, the new incumbent, met the visitors; and, after examining various objects of interest under his guidance, and partaking of his hospitality, they moved on to Stoulton Church, over which the Rev. G. E. Walker, the incumbent, conducted them. The party then went to Pershore Abbey Church, which was the chief point in the excursion. Here the party spent some time, and Mr. J. S. Walker read a paper on the church, and the restorations which Mr. Ball, the churchwarden, has perseveringly aided in carrying out, at a cost of 6,000*l.*, and under the superintendence of Mr. Scott. After glancing at the shocking state of St. Andrew's Church, the party went to Norton Villa, the residence of Mr. G. J. A. Walker, where they dined: after which they returned to Worcester.

METROPOLITAN BOARD OF WORKS.

The Granite for the Thames Embankment.

The Chairman drew attention to a correspondence he had received from Mr. Thomas Scott, of 35, Old Jewry, and he wished the Clerk to read it to the Board.

The Clerk then read the correspondence to which the Chairman referred. It contained an allegation that the officers of the Board had ordered the contractors for the Thames Embankment to use granite from a certain quarry for the facing of the Embankment, to the exclusion of that from other quarries which was of a better quality. It also complained that six samples of granite had been sent in to the Board for examination and approval, and that only three of them had been tested.

Mr. Bazalgette, the engineer, in explanation, said he had adopted the same course in choosing the stone for the Embankment that he had on other occasions. He had examined specimens of stone from Ireland, and had submitted them and others to be tested by Professor Tennent, and he had reported that the granites from Kirkconnell and Dalbeattie were the most uniform in their component parts, and therefore likely to be more durable than the others. He had been accused of having received six specimens of granite, and tested only one of them. The fact was that he had received only four from the contractors, and those he had tried. His office was inundated with granite samples, and it was unreasonable to expect that he should test them all.

The Subways of the Metropolis.

Mr. Carpmael brought this subject under the consideration of the Board, and entered into a history of the efforts the Board had made since its formation to carry out the construction of subways in the metropolis. At present there was nothing to prevent the companies from breaking up the streets that the Board had made, and the question now was whether the Board should have compulsory powers to compel the companies to use the subways. He urged the Board to continue the construction of subways, and leave it to time and public opinion to force the gas and water companies to use them. He concluded by moving that the Board do proceed with the construction of the subway in the Thames Embankment, and with the subway in the new street to the Mansion House.

The resolution was ultimately carried unanimously.

The Progress of the Thames Embankment Works.

Mr. Bazalgette, in his monthly report, said;—As to the Thames Embankment (No. 1 contract) between Westminster and Waterloo Bridges,—The approximate value of the work done and of the materials and plant upon the ground is about 54,000*l.*, or 15,000*l.* in excess of my last report. The contract between Waterloo Bridge and the Temple Gardens is going on favourably. A length of about 120 ft. of the dam is completed and made water-tight, and concrete is being tipped into it up to the level of the underside of the brickwork of the river wall. The estimated value of the works, &c., is about 35,000*l.* The material used in filling in along the foreshore is now entirely confined to that supplied by the Thames Conservators.

FROM AUSTRALIA.

Labour Report.—The last quotations at Melbourne for wages were about as follows:—Masons, 10s. per day; bricklayers, carpenters and joiners, and plasterers, from 8s. to 9s.; painters, 8s. to 9s.; bricklayers' and plasterers' labourers, 6s. to 7s.; gas-fitters, 8s.; whitesmiths and general smiths, 10s. to 12s.; blacksmiths, 8s.,—with rations, 25s. to 30s. per week; wheelwrights, ditto, 35s.

Ballarat.—This great centre of gold-digging renown is beginning to be proud of its public buildings. The *Star*, a local paper, thus refers to some now in course of erection:—"The new Union Bank is fast nearing completion, and already presents a handsome front. The new Post-office is now up to the cornice in the front elevation, and the completion of the front and east side will soon be achieved. Looking at the temporary endings of the west side and rear of the building, the edifice has a ragged appearance; but the front elevation promises to be a welcome and ornamental addition to the architecture of the town. The Savings' Bank is nearly finished, and its repairs and additions have made it assume quite a new aspect. With less of the ornate in its appearance than it wore before it looks more handsome."

Street Architecture in Melbourne.—The local *Post*, an illustrated paper, in giving a view of new premises in Collins-street East, says,—"It is only a week or two ago that we were celebrating *the thirteenth anniversary of the foundation of the colony*; and when we look back a few years, and reflect upon the then dimensions of the city, and the class and character of the buildings which formerly stood, we may be justly acquitted of hyperbole when we say that no city in the world has made such gigantic strides during a similar period as Melbourne has done; for not only has the city increased in its proportions, but the many fine and substantial buildings which now adorn our principal streets bear ample testimony to the progress which has been thus rapidly made. Any person who visited Melbourne ten years since, and returned during the present year, could not but be struck with the vast improvements which have been effected. In place of the rickety-looking wooden tenements which then existed, there are now elegant and substantially-built edifices, many of them constructed with a uniform design, and these improvements are going on from week to week. In Collins-street, the Regent-street of Melbourne, this change is particularly noticeable. Collins-street East is as much devoted to the mercantile community as Collins-street West is the promenade of fashion.

Telegraphic Progress in South Australia.—The number of telegraph stations which were open in South Australia during 1863 was thirty-six, and the miles of line in operation were 747, with 1,064 miles of wire. The net revenue obtained was 8,429*l.*, and the outlay for working expenses and maintenance of lines was 9,107*l.*, showing a loss of 678*l.*, which is accounted for by the number of unremunerative country stations in different parts of the colony. The business transacted with the other colonies last year produced the following amounts:—With Victoria, 5,085*l.*; with New South Wales, 2,853*l.*; and with Queensland, 188*l.* In South Australia the total receipts were 8,695*l.*, against 8,047*l.* for

1862, and 7,382*l.* for 1861. The stations which pay are, Adelaide, Port Adelaide, Gawler, Kapunda, Clare, Burra, Kadina, Wallaroo, Port Elliot, Robe, Mount Gambier, Penola, and Mac-Donnell Bay. The stations of Yankalilla, Wellington, and Kincraig just pay their expenses. The extensions during the year were from Kadina to Port Wallaroo, and from Penola to Kincraig.

FROM BRISBANE, NEW ZEALAND.

The Brisbane Bridge, as now contracted for, is to cost 52,000*l.* The length between the abutments on either bank will be 1,030 ft.: the elevation of the roadway at its greatest height above the river bed is to be 70 ft.: it will have twelve piers, and a span of 86 ft.; and its construction will cost 50*l.* 9s. per lineal foot, exclusive of the approaches. Mr. T. Oldham, C.E., has been appointed to make the necessary working drawings and superintend the work, which is being pushed on in a speedy manner. Plans and orders for the iron-work of the bridge were sent home last mail. A new double bridge of iron across the Bremer river, to be constructed for railway and other traffic, has been designed by Mr. Fitzgibbon, and its erection contracted for by Messrs. Peto, Brassey, Betts, & Co. The length of this bridge between the abutments will be 450 ft.: the height of the roadway above the river bed will be 70 ft.: the width of span will be 150 ft.; and the whole will be completed for 19,700*l.*, being at the rate of 43*l.* 15s. per lineal foot, exclusive of approaches. Preparations for the construction of the bridge have been commenced by the contractors. The colonial architect, and the architects of the city, Mr. J. Cowlishaw, Mr. B. Backhouse, Mr. W. H. Ellerker, and others, have various works in hand, such as the Lands and Works building, various stores and shops, banks, villas, schools, churches, and other buildings.

Some little time ago we mentioned the proposed erection of a town-hall in Brisbane with a few friendly comments. The *Queensland Guardian*, when reprinting this, added a footnote containing these words:—

"It is a curious coincidence that the *Builder* takes the same objections to some parts of the design and scheme that were taken in our columns about the time that the contract for the building of the town-hall was let." "Anent the town-hall we have heard some ugly growls by those who know 'at the rather jerry kind of work that is being done in carrying out the contract; but we suppose that as the *best* professional skill has been engaged by the Municipal Council, the work is first-rate. However, we understand, that when the plasterer and painter have gone over the building, little will be seen for the most fastidious to carp at."

And for this, when the last newspaper left the colony, the proprietor had received notice of an action for libel at the suit of the contractor! We can scarcely suppose that the contractor was in earnest, or that any jury would deny the right of a public journalist to enter so mild a record of opinion in a matter affecting the public purse.

SANITARY MATTERS.

Fever Epidemic at Westminster.—Scarlet fever of the worst kind has been very fatal round about the Abbey. In one family, three persons have died; and other bad results give just cause for anxiety. An artist who was much engaged in sketching in this neighbourhood in Dean Buckland's time, writes respecting the bad condition in which the drains were at that time, and gives some account of the endeavours which were then made to set those matters right. He asks if this was effectually done in connexion with the school and other buildings, some of them very inconveniently arranged, which stand about here? He also inquires about the water supply, and wonders if the old conduits are still used, or the water obtained from a more pure source. The present circumstances still require that sanitary inquiry should be made here.

State of Hastings and St. Leonard's.—It is satisfactory to observe that the sanitary state of our watering-places is now exciting attention. The bad practice of allowing the sewage to escape from the sewers on the beach before the town, and even above low-water mark, so that the water used by bathers is contaminated with it, has on various occasions been reprobated in the *Builder*. It is, moreover, a suicidal practice, as regards the prosperity of a watering-place. A writer in the *Times* complains of Hastings and St. Leonards-on-Sea, which have long had a bad pre-eminence in this respect, as those will believe who recollect of the fatality to a well-known family years since recorded in the *Builder*. The writer alluded to says:—

"At comparatively short distances long lines of cast-iron sewage pipes ornament the beach both of St. Leonard's and Hastings, and most of them discharge their contents considerably above low-water. Between these are the bathing grounds. Sometimes the water is discoloured for a considerable distance beyond and around the mouths of these disgusting pipes. It is even reported that instances have occurred in which ladies after a sea bath in the morning have been obliged to resort to a disinfecting ablution at home. The idea of bathing in the immediate proximity of sewers is horribly disgusting, to say nothing of the actual effect. While dining at a house in Robertson-place the other night, the fœtid emanations of the great sewer pipe opposite were very evident at low water.

The people at Eastbourne seem to be striving in earnest to remedy every defect which has been alleged against their town. I was there a few days ago, and saw not a single sewer discharging its noxious contents into the sea immediately in front of the houses, and all among the bathing-machines, as at St. Leonard's and Hastings. I write these remarks, Sir, with the view of stimulating the authorities of the two latter towns to immediate action."

Fever at Sowerby.—Attention is being called to the unhealthy state of Sowerby, fever being exceedingly prevalent in that village; and it is added that such is sure to be the case until the place is thoroughly and effectively drained. Some four years ago a stir was made in this matter; but on the question being brought to poll, a large majority declared against any improvement, and they (and others) are now reaping the fruits of their obstinacy.

High Rate of Mortality at Rotherham.—The statement made at the last meeting of the local Board of Health, by their medical officer, in reference to the high rate of mortality in the districts appears to have created some alarm. Bills have been thickly posted about the town, by order of the Board, threatening any person with proceedings who shall offend against their by-laws, and allow rubbish of any kind to accumulate on their premises. The only objectionable feature in the order is that the scavengers will be prosecuting their duties in the middle of the day.

Health of Sheffield.—Rumours have been rife for some time of the prevalence of fever in this town, and some alarm has been excited in the public mind of an impending epidemic. Inquiries made by the local *Independent* show, that whilst there has been a considerable amount of sickness, it has not been of a more than usually serious character, with the exception of one or two particular localities which are unfavourably situate. The protracted drought has converted the beds of the streams that pass through the town into stagnant ditches, and the people living along their banks might be expected to be peculiarly affected by the bad sanitary condition with which they are surrounded. The medical men are able to trace the prevalence of fever directly to the condition of the bed of the Sheaf, which receives the drainage of the houses, and is nothing more than a huge cesspool, emitting an abominable stench. It is to be hoped that the condition of the houses and the stream will receive prompt attention, or a more formidable evil may arise.

Liverpool.—From a report to the Health Committee, it appears that 1,714 houses in the unhealthiest districts, containing 4,560 apartments, 1,096 cellars, 731 courts—(north district, 696 courts; north-east district, 552 courts; central district and south district, 756 courts)—have been put under examination with the view of improving their sanitary condition. The medical officer of health reported that the number of deaths registered in the borough during the week ending October 1st was 261, or 162 in the parish, and 99 in the out-townships, being five below the corrected average of the last ten years. Zymotic diseases caused 88 deaths, being 10 below the corrected average. Mr. Stitt said he was sorry to see that, though the total deaths were 10 below the average, the fever cases were so high as to be 16 above the average. He asked the borough engineer when he would have the plans ready for disinfecting the clothes of those who had been attacked by fever or other infectious diseases, by the employment of dry heat. The borough engineer replied that two sets of plans were ready, and had been submitted to the committee. He was now preparing plans for one mode, which bore on the face of it its own recommendation, and which was to secure the desired object by means of gas. The deputation to the Social Science Congress presented a long report upon "The Utilization of Sewage," "The Overcrowding of Houses," and "Infant Mortality." The principal facts mentioned in the report were:—1. That no known chemical agent exists for thoroughly purifying sewage, nor is there any mechanical or other agency for profitably consolidating it. 2. That under certain conditions sewage may be utilized by applying it to the land, which is its natural purifier. 3. That it can be only advantageously applied in a liquid state, and must accordingly be conveyed to the land by means of conduits and pipes. It was said to be fully proved that the application to clothing, &c., of dry heat, of 150 degrees to 212 degrees Fahrenheit, is effective as a disinfectant. A resolution was passed recommending the Association to use their best endeavours to induce all local authorities to establish public disinfecting chambers, as contemplated at Liverpool.

Increase of Fever in Leighlinbridge (Carlow).—Owing to a very considerable increase of fever in Leighlinbridge, according to the *Carlow Sentinel*, a special meeting of the dispensing committee of the district has been held, and a sanitary officer appointed and other steps taken for the sanitary improvement of the town.

A COMPETITION IN BELGIUM.

The Belgian competition announced in the *Builder*, and in which a premium of 300 francs was offered by the guild of St. Thomas and St. Luke, for the best design for a parish church, has just been decided; the adjudication being made by a jury of archæologists and architects, who have awarded the prize to Mr. W. C. Brangwyn, of London, architect.

WIDE TENDERING.

In reply to "Farnhamensis," Mr. W. Elliott, builder, denies that he "recklessly cubed the building at 1s. 4d. per foot," and goes into particulars for which we have not space. He shows that the drawings were given in a way to lead to differences of opinion;—further that,—

"There were no detail drawings: the architect was to supply them afterwards; and the contractor was to execute them, whatever they might be, to his entire satisfaction. The architect or his client had the power to enlarge the house or premises to any extent; and payment of such increased works was to be entirely left in the power of the architect. No arbitration clause permitted, and no alterations to be made without a written order, which can seldom be got, and is often taken as an insult by architects when asked for such an order. Where the quantities are taken off, the parties receiving the benefit should be made responsible for them. I would much rather trust to cubing when I can see the drawings and specification, than take for granted the quantities as given by three-fourths of the surveyors who take them off where tenders are advertised for."

GLAZING.

Sir,—In March last I removed a quantity of old wood sashes from freestone window-frames, and substituted plate glass in lieu thereof. A groove, 1 in. in depth by 1½ in. wide, had been cut in the stone mullions and transoms, for the reception of styles and top-rails of old sashes. The plate glass is inserted in this groove to the depth of about ¾ in., and made good with Portland cement. Within the last few weeks three (out of about eighty squares) of the glass have cracked. I was at first inclined to attribute this to expansion or contraction; but it has been exposed to a great variation of temperature previously to being cracked.

Can any of your readers inform me what is the real cause of the glass giving way, and suggest a remedy? Would a more elastic stopping than Portland cement remedy it; and if so, what kind of stopping? W. B.

A NEGLECTED CITY ON THE SEVERN.

Perhaps few places with an equal number of inhabitants are progressing slower than the most important upon England's noblest river—the Severn. With a position unsurpassed for beauty and healthiness as well as convenience, a charming old city is in a state of comparative stagnation. In every direction cottages and villas are not in course of erection. Go north, south, east, or west, and the merry tinkle of the bricklayer's trowel salutes not your ear. The beautiful hills that surround it seem provided by nature for the reception of most delightful residences, which stand neither upon their summits nor bases. Progress as slowly as possible seems the order of the day. "Let us have our suppers and go to bed," is in the mouths of young and old. A short time since this somnolescent city rejoiced in the possession of a beautiful arboretum; but, lest the grass should grow upon its gravel walks, it was sold by auction to an enterprising lawyer. In its very centre stands a music-hall, which is filled only when it is opened gratis, and within this musty edifice,

which looks like a Brobdignagian's tomb, stands a dirty deal piece of framework, which tradition says is an organ. Not a quarter of a mile from this ugly fabric is what is called a theatre, which may be known by the absence of a splendid portico, and by a beautiful whitewashed façade, unbroken by any cornice, string, recess, aisle, or ornament whatever, excepting really inconvenient apertures, the only means of ingress and egress; but a fuller description of it would be honouring it too much. Within speaking distance of the theatre, and in the same angelically paved street, stands about as sad a specimen of modern art, in stucco, as can be found in any corn exchange in England. Among the 35,000 inhabitants of this city on the Severn, there are several architects,—at least, if door-plates are to be believed,—but what erection, save the cathedral, the guildhall, and a new bank, there is worth the brain of an architect few can tell. Yet there are no speculating builders in the place, and if the houses were ever designed at all, they must have been done by the architects. As one rambles about the place one cannot help remarking the noble terraces and vast squares, as well as splendid crescents that are not appearing in every direction. New roads are not being staked out, and narrow streets as well as filthy alleys, are rapidly not giving way to modern improvements. The mechanics' institutions that are to be found in every place of 10,000 souls have a noble representative not here, and the public baths and washhouses are blessings the people enjoy not. At Shrewsbury one might take a boat, and voyage down this Rhine of England, and his arrival at what should be a port will be known by the absence of crafts of the same nature as the one that bears him over the placid surface of this noble and much neglected river.

A Lover of Progress.

SURVEYORS AND TOWN COUNCILS.

I have read the letter signed "Fairplay" (in your last number) on the surveyorship of Weymouth, and the paltry, inconsistent conduct of the town council. I am fortunately not one of the thirty-two competitors for *advertised position* which had already been pre-determined on as to who should fill it.

It has now become a disgraceful farce of town and borough councils advertising for the tried and proved abilities of educated, trained, and effective men of business, as engineers, surveyors, and managers of works, wherein they are expected to conduct themselves as gentlemen, and maintain appearances as such on a pitiful stipend—for it cannot be called a pay or salary—which a journeyman London mechanic would refuse. The highway surveyorship of the Croydon district is a sample of these disgraceful offers, in the last *Builder*. So is the Lavenham district, in which the assistant surveyor is to keep his horse at *his own expense* (I suppose on road-sweepings or sawdust), and for the munificent stipend of 100*l*. And lastly, the "Tyldesley with Shakerly" district, wishes to secure an engineer, surveyor, and clerk, or what I should call a Trinity man—three in one—for 130*l*. per annum.

Nothing but a severe lashing in the *Builder* can alter this wretched state of affairs.

Civil Engineer.

FROM SCOTLAND.

Castle Kennedy.—The foundation stone of the new mansion of the family of Stair has been laid by Viscount Dalrymple, in a field on the lands of Inch Park, adjoining the pleasure-grounds of Castle Kennedy. Messrs. Brown & Wardrop are the architects; Messrs. Arch. Murray & Sons the masons; Mr. W. Alexander the joiner; and Mr. A. Pinkerton the clerk of works. After the ceremony, the builders and men employed on the work, to the number of nearly one hundred, were entertained at supper in the King's Arms Hotel, Stranraer, Mr. Murray, builder, in the chair; and Mr. Pinkerton, clerk of works, croupier. The building is to be in the Scottish Baronial style of architecture, and will have a frontage of 270 ft. The principal feature will be a massive square tower, which rises from the south-east corner to a height of about 90 ft. above the surface. The entrance is from the north side: the public rooms face the south, commanding picturesque views of the two lochs and their islands, with the fine old ruin of Castle Kennedy and its green terraces rising between them. The new castle will be terraced on the south side, having stone balustrades and broad flights of steps leading to the shrubberies and dress grounds. The walls are being built with whinstone from the quarries at Glenluce, faced up with freestone of a cream colour, from Lancashire.

Oban.—St. John's episcopal church, at Oban, has been consecrated by the Bishop of London, acting for the Bishop of Argyll and the Isles. The building has been erected near the northern extremity of the town of Oban, and on one of the best sites in its beautiful bay. The church is of small dimensions, consisting only of a nave and chancel, the total length being 61 ft. inside. The gable next the sea is pierced with a rose window, and the chancel end with a triplet with traceried top. The windows in the flanks of the nave are lancets. The roofs over the nave and chancel are open-timbered; the ceiling between the spars of the roof being painted with diaper patterns in colours. The design requires a belfry to complete it. The chancel is laid with encaustic tiles. The east window, of painted glass, is the gift of Sir Donald Campbell, bart., of Dunstaffnage. The rose of the western gable has been also filled with painted glass, the gift of Mr. David Hutcheson. The lancets beneath the rose window contain memorial windows, erected by Mrs. Campbell, of Lerags. The committee applied to the late Mr. Charles Wilson, architect, for the plans for this church, but owing to his death they were subsequently intrusted to Mr. David Thomson, now of the architectural firm of Messrs. Heath Wilson & Thomson, of Glasgow. The contractors were Messrs. J. M'Corquodale, mason; W. Menzies, joiner; A. Fairgrieve, plumber; H. Brown, slater; G. M'Alpine, plasterer; C. M'Laren, glazier; R. Ferguson & Sons, painters; G. Smith & Co., ironworkers. Mr. J. Hay has fitted up the heating apparatus, and the stained glass has been executed by Mr. Wailes, of Newcastle; Messrs. Cox & Son, London; and Messrs. Hugh Bogle & Co., Glasgow. Mr. T. Duncan was the clerk of works. The entire cost of the church has been about 1,400*l*.

Newhaven (near Edinburgh).—The Newhaven fishermen have resumed their labours in bringing stones from Queensferry, towards the completion of their harbour, since their return from the Dunbar herring fishing. The plans and specifications, prepared by the Messrs. Stevenson, engineers, Edinburgh, have been laid before a number of the fishermen for their inspection. The fishermen are unanimous to go on with the work, and it is understood that the Provost of Leith will lay the plans and specifications before the dock commission and the town councils of Leith and Edinburgh, with the view of getting pecuniary aid from those bodies to complete the new harbour. The fishermen have to lay some 6,000 additional tons of stone on the breakwater, when their part of the work will be nearly completed.

Skipness.—The heritors of the parish of Saddle and Skipness, near Campbelton, have found it necessary to repair and alter Saddle Church. The last-named architect has prepared drawings for partly rebuilding it.

PROVINCIAL NEWS.

Liverpool.—The proceedings of the markets committee, laid before last week's council, contained the following recommendations:—1. Recommendation to authorise the improvement of the north and south ends of St. John's Market, upon the principle shown upon the plans submitted; and also for providing a new roof for that market, the total estimated cost being 16,200*l*., the consideration of which subject was postponed at the monthly meeting of the council in August last. 2. Recommendation that application be made to Parliament in the next session to acquire the property referred to in the surveyor's report to this committee, as No. 1 on plan, and coloured pink and green, and to appropriate the same as an enlargement of the hay-market, and as the site of a wholesale vegetable market, at the estimated cost of 83,000*l*., including the widening of streets and the removal of St. Anne's Church, in order to provide proper access, but exclusive of the cost of works. The consideration of the recommendations was deferred.

Scarborough.—The town council having received a report from the borough gaol committee, consisting of an abstract statement of the several estimates that have been sent in from contractors for the work of erecting the new gaol, and showing that the highest estimate for the entire work was 15,990*l*., and the lowest 11,323*l*., a discussion followed, the mayor observing that, as the estimates had exceeded the anticipations of the council, the question now was, should they proceed with the work or postpone it? He believed it to be practicable to modify the specifications so as to reduce the cost; but then came the question as to how far such modifications as they might make would meet the views of the Secretary of State. Mr. Voules, the Government inspector of prisons, had promised to spend two or three days with him, when his opinion on the matter might be obtained: at his suggestion, therefore, the meeting was adjourned. When first considering of the probable cost of the gaol, the mayor remarked, they thought about 10,000*l*. would meet it, including the purchase of the land; whereas they now found that it would amount to 18,000*l*., without such extra items as usually turn up in such a work.

Worcester.—Alderman Lea's Almshouses are nearly completed. The houses are in close proximity to the schools recently founded and presented to St. Nicholas parish by the same gentleman in the Infirmary-walk. The almshouses are six in number, and are built of brick, with Bath-stone facings, the front elevation being varied by dormer gables for the bed-room windows, and lines of black bricks indicating the arches of doors, windows, &c. A steep-pitched roof is surmounted by ornamental ridge tiles. The doorways have pointed arches and Gothic iron hinges to the doors; windows square-headed and transomed, and the glass set in cast-iron work, lozenge-shaped. At the base the walls are 18 in. thick, and decrease to 14 in. and then to 9 in. at the top, and the whole work has been done under the direction of Mr. H. Rowe, architect; Mr. O. Wilson, of Worcester, being the contractor. The cost will be about 2,000*l*.

Nottingham.—The tenders submitted by the builders were opened at the offices of Messrs. Jackson & Heazell, architects, for the erection of a new warehouse and show-rooms in St. Peter's-gate for Mr. William Keeling, when that by Mr. R. Willimott was accepted. The new buildings will be 90 ft. long by 30 ft. wide, and when completed the whole length of the ground floor, shops, and sale-room will be 137 ft. The front to St. Peter's-gate will be set back in a line with the new County Court buildings, and will have plate-glass windows nearly the whole height and width of each story on the ground and first floors. Internally, above the basement story, the building will be constructed with wrought-iron girders, thus avoiding the necessity for iron columns.

West Hartlepool.—A new Masonic Hall has been founded with the usual ceremonial, on a site near Christ Church, and at the head of Church-street, the chief thoroughfare in the new town of West Hartlepool, and according to a design by Bro. John Tilman (P.G.A.), of Sunderland, architect, the contractors being Brethren J. Johnson and Jonathan Salmon; and the estimated cost of the building upwards of 600*l*.

CHURCH-BUILDING NEWS.

Sherbourne (near Warwick).—A new church (All Saints') has been constructed here by Miss Ryland, of Barford-hill, formerly of Birmingham, and has been consecrated by the bishop of the diocese. The architect was Mr. Scott, and Mr. Huddleston, of Dublin, the builder. Mr. Farmer, of London, has executed the carvings. The church, which is Gothic and built of Bath stone, is internally divided into a nave, north and south aisles, and chancel. Arches divide the aisles from the nave. The pillars spring from clusters of polished marble. Over these are the clerestory windows, with marble shafts, the corbels representing angels in an attitude of devotion. All the capitals are carved. The roof is open, darkly stained and polished, and the seats are open benches, with reclining backs.

Wishford (Wilts).—The Church of St. Giles, Great Wishford, has been re-opened by the Bishop of Salisbury. The church, which was an ancient structure, being in a very dilapidated state, has been restored, principally at the expense of the Pembroke family. The architect was Mr. T. H. Wyatt. Mr. T. Miles, of Shaftesbury, was the contractor; and the works were carried out under the superintendence of Mr. J. Harding, of Salisbury. The carvings, which are Naturalesque in style, were executed by Mr. Sansom, of London. Mr. Walker, of London,

has received an order for a new organ, but it is not yet completed.

Congresbury (Somerset).—A new church, dedicated to St. Ann, and situate at Hewish, in the parish of Congresbury, has been consecrated by Baron Auckland, the Bishop of Bath and Wells. The church has been built at the sole expense of Mr. R. Phippen, of Bedminster, on a spot near where the parishes of Wick St. Lawrence, Yatton, Congresbury, Puxton, and Kewstoke converge. The site extends over about two acres, and it has been presented by Mrs. Rooke, of Frenchay. The church has been built in the Early English style, the plan being cruciform. It comprises a nave, with south porch, chancel, and organ chapel, and vestry on the north side. The north and south transepts project from the crux, which is groined in wood. On the north is a circular bell-turret, surmounted by a gilded cross. The interior of the church is paved with Staffordshire tiles. It is seated with open benches, which will accommodate 250 persons, all free. The chancel is a circular apse, containing thirteen windows, the centre of which contains the Salvator Mundi, the twelve supporting windows containing each a figure of one of the apostles. The windows form an arcading inside, resting on slate columns, and were painted by Mr. O'Connor, of London. The chancel is lined with Bath stone throughout. The roofs are open, and the nave arched and panelled. The chancel is divided from the tower by a stone arcaded screen. The edifice is built of limestone from the Worle quarries, with Bath stone dressings. The roof is covered with Bridgwater tiles. In the turret is a bell, manufactured by Messrs. Llewellyn & James, of Bristol. In a niche over the south transept door is to be placed a statue, carved in stone (by Mr. Farmer, of London), of St. Ann teaching the Virgin to read. The church has cost about 2,500*l.*, and Mr. Phippen is about to commence the erection of a glebe house contiguous to the church, at an additional outlay of about 1,200*l.* The establishment of schools is to be a subject of after-consideration.

Nottingham. Two churches, St. Saviour's, Arkwright-street, and St. Ann's, St. Ann's-road, have been consecrated. St. Saviour's is from a design by Mr. R. C. Sutton, selected in competition. The edifice is in shape a parallelogram, and consists of nave and aisles. The chancel is situate in the east end, with a vestry at one side, an organ chamber, with a stone floor, on the opposite side. The dimensions are,—Length of nave, 74 ft., and width, 24 ft. The aisles are each 74 ft. long and 17 ft. wide; and the chancel is 30 ft. deep by 24 ft. wide. The height of the nave is 46 ft. A corbelled moulded arch divides the nave from the chancel, and the aisles are divided from the nave by arcades, supported on octagonal piers with carved caps. For the purpose of increased strength, brick arches have been introduced over the arches in red and black courses. Above these arcades is a clerestory, pierced with twenty segmental triangular windows. The roofs are of open timber work, chamfered, the spandrel being filled with tracery. The style is Geometrical. A five-light window is placed in the east end of the chancel, with decorated traced head, and two-light windows, with a wheel window, occupy the west end. A tower, of three stages, is placed at the western extremity of the south side of the church. The base of the tower is 16 ft. square. The height of the spire is about 110 ft. The carving throughout is conventional, by Mr. Earp, of London. The material used in the erection of the edifice is dressed Bulwell stone, with dressings of Ancaster stone. The plumber's work has been done by Mr. Corden. The church provides accommodation for 731 persons on the ground-floor, and the cost is about 3,100*l.* The work has been carried out by Mr. J. Barker, builder, Nottingham. St. Ann's Church is of the following dimensions:—The nave is 80 ft. long and 25 ft. wide; aisles, 80 ft. by 13 ft.; chancel, 22 ft. by 20 ft.; vestry, 15 ft. by 12 ft. The church will accommodate 750 persons. The design is Early Decorated, the whole of the windows throughout being filled with geometric tracery of different patterns, no two windows being alike. There are five bays to the nave, and the capitals of the eight columns and four responds are filled with natural foliage. The whole of the windows and doors throughout have stone dressings in the inside as well as the outside. The seats are of a plain character. Mr. Clarke, of this town, is the architect. Messrs. Haw & Wool were the builders; and the various stone and wood carvings have been executed by Messrs. Pearse, Mee, & Smith. Mr. H. Spooner was the clerk of the works for this church, and also for St. Saviour's. The church affords 822 sittings, of which 290 are appropriated, and 532 free,—284 for adults, and 248 for children. The cost was 3,100*l.*

Mirfield (Yorkshire).—St. Saviour's Church, Ravensthorpe, Mirfield, has been consecrated by the Bishop of Ripon. The church stands on the south side of the Dewsbury and Elland turnpike-road in Mirfield. It will accommodate 500 persons, 350 adults and 150 children, all free. The style is of the fourteenth century. The church consists of a nave and chancel, divided from the aisle by pillars and five arches. Both nave and aisle have high-pitched gabled roofs: the latter is continued to the extreme east end, forming an aisle to the chancel. The estimate, we understand, was 1,927*l.* for all the expenses of the church and boundary walls, &c., excepting the site. The architect was Mr. J. A. Cory, of Carlisle, who some years ago built Hopton Church, in the adjoining district.

DISSENTING CHURCH-BUILDING NEWS.

Crewe.—The corner-stone of a new Unitarian Chapel has been laid in Beech-street, Crewe. The style will be Gothic, and it is estimated to cost, exclusive of the land, 1,100*l.* Its length is 54 ft. by 33 ft., and the seats will be open stalls, affording accommodation for 240 people. There is to be a platform pulpit at the north end, and an organ platform at the south end. The height of the wall to the naves will be 18½ ft., centre of roof from floor 42 ft. The roof will be of open timber, spring rafters, resting upon carved stone corbels. The walls inside, from the base line, will be plastered with rough stucco, and jointed to represent stone work. The aisles will be laid with Messrs. Minton & Co.'s encaustic tiles. At the sides, the chapel will be lighted by four pairs of lancet windows, glazed with cathedral glass, and the body of the building will be red brick, with buff facings and cornice. The roof will be covered with Bangor slate, worked into a Gothic pattern. At the north end there will be a school-room, similar in style, 33 ft. by 20 ft., separated from the chapel by three Gothic arches, springing from hexagon pillars filled with single brick walls. The entrance will be lineable with the front side, and will be similar to the entrance to the chapel. For heating purposes, slow combustion stoves will be employed. The architect is Mr. J. W. Shufflebotham, of Crewe.

Bridgwater.—The new Congregational chapel in Fore-street, Bridgwater, has been opened. The style is Geometric Middle Pointed. The whole of the work has been executed from the design and under the superintendence of Mr. Down, of Weston-super-Mare, architect, by Messrs. Shewbrooks & Son, of Taunton. The sculptured portions of the building have been carried out by Mr. Hurly, Taunton. The building will accommodate 1,100 hearers. The cost has been 4,500*l.*

Scarborough.—The foundation stone of the new Congregational Church, on the South Cliff, has been laid by Mr. Titus Salt. The edifice is in the form of a T, with nave, side aisles, and transepts. It is to be built in the Decorated style. The front faces Oliver's Mount, and the tower and spire at the south-west angle rise to the height of 160 ft. immediately opposite one of the streets which leads to the Esplanade. The main entrance is a double doorway, with shafts and hollow moulding, and a single light window on either side. Above is a rose window. The windows in the side aisles are of three lights, executed in stone. In the clerestory the windows are triangular, filled in with tracery. The transept windows are of five lights, 28 ft. high, with tracery in their heads. The extreme length of the church, including the vestibule in front, and the ministers', deacons', and ladies' vestries behind, is 130 ft., its breadth 63 ft., and height 53 ft. The transepts are 23 ft. by 30 ft. At the north-east end of the church the vestries on either side are terminated octagonally, between which is an open arcade of arches. The church is constructed to seat 1,040 persons, but by the erection of transept galleries, the accommodation can be increased to upwards of 1,200. The stone employed in its erection is a white stone from the neighbourhood of Whitby. The architects are Messrs. Lockwood & Mawson, of Bradford. Mr. Johnson is clerk of the works. The cost of the erection, including the price of the ground, is expected to be about 10,000*l.*

THEATRES.

At *Drury Lane*, Shakspeare is just now at home, drawing densely-crowded houses on the Saturday nights, when fresh plays are produced, and "good business" the rest of the week. In "Othello," neither Mr. Phelps nor Mr. Creswick is well suited, and the play drags heavily for the most part. We look more hopefully to the revival of "Cymbeline," on Monday, and the return to the London stage of Miss Helen Faucit.

Haymarket.—Madlle. Beatrice, the new actress from abroad, has succeeded, without creating any great *furore*, in interesting the English play-going public. Her appearance and bearing are greatly in her favour, and her pronunciation of the English tongue good. Mr. W. Farren's acting in the piece in which she appears, "Madlle. de Belle Isle," is much to be commended. In "Presented at Court," Mr. Buckstone resumes his original character, *Geoffrey Wedderburne*, and greatly delights his audience.

The Princess's.—"The Streets of London" has proved, as we foresaw, a lasting success. Apart from the remarkable excellence of the scenery the construction of the piece is thoroughly dramatic, and every part in it is well worked up, and remarkably well played. This was the case in the "Colleen Bawn," "The Ticket-of-Leave Man," and other of the long-runs, and should be remembered by managers generally. The "Puffy" family, with their good kind hearts, come out as a distinct and striking group; nor are such hearts rare amongst the poor, difficult as it may be to preserve them. *Badger*, as played by Mr. George Vining, is the central part of the piece; but all the other characters have their fair share of opportunities, and the result is a striking whole, which will probably take the manager up to Christmas, with flying colours.

Books Received.

VARIORUM.

"The United States Sanitary Commission," reprinted from the *North American Review* for April, 1864. Boston: Crosby & Nichols." The Federalists have profited by our costly experience in the Crimea, and have not waited till their armies were decimated by insanitary arrangements, as we did, before appointing a sanitary commission. In this reprint the scheme of its operations is unfolded, and the nature, methods, and results of its labours are examined. The various labours in which the commission engaged were grouped in two separate but co-ordinate departments,—that of preventive service and that of supplementary supply and relief,—both of which were equally inspired with the ideas of health, humanity, and patriotism. The *preventive* or strictly sanitary and scientific department of the work, from the first, has comprised,—1st, a corps of sanitary inspectors; 2nd, a bureau of sanitary and vital statistics; 3rd, the directorship of the distribution of the commission's supplementary supplies or "sanitary stores;" 4th, the preparation and publication for free distribution among medical and other officers, of compendious monographs upon the most practical subjects in army hygiene, surgery, and medicine. The department of *relief* is co-ordinate with that of *sanitary inspection*, and, so far as its ministrations relate directly to life and health, it is under the direction of the inspectors or medical officers of the *preventive* or sanitary department of the service; while the various branches of *relief* not thus related to the sanitary service constitute the system which is designated as that of *special relief*. All these branches of the commission's work sprang into operation under the original scheme of organization, and from the pressure of events during the early months of the war. During the past six months, the vast assemblage of hospitals within the defences of Washington, the field-hospitals at Gettysburg, and the entire sick population of General Gilmore's command, have been provided by the Sanitary Commission with full supplies of vegetables, and all other fresh provisions that could best be obtained from the markets of Philadelphia and New York. The total expenditures of the Commission for such supplies, during the last three months of 1863, amounted to nearly 120,000 dollars. It is stated, upon good authority, that more than a hundred thousand Federal soldiers have been wounded in battle since the war began, and that disease has already brought into the military hospitals,

general and regimental, *upwards of two millions* of cases. The President of the Commission has stated that "50,000 dollars would not cover the cost of our whole service [of supplementary supplies] in the first two weeks after any one of our great battles. At Gettysburg it was 75,000 dollars."——"Ince & Gilbert's Outlines: Descriptive Geography—Outlines of Roman History. Kent & Co., Paternoster-row." We have already spoken in commendatory terms of this series of outlines; and, we think, of the part on Descriptive Geography itself, by Professor Wallace, now before us. The "Outlines of Roman History" are by the Rev. E. Boger, M.A., Head Master of St. Saviour's Grammar School, Southwark, and give a condensed and skilful view of Roman history, exceedingly well adapted for the young of both sexes.——The *Art-Journal* has a chapter on "Ancient Egyptian Decoration," illustrated with a number of drawings by Mr. Edward Hopley. W. J. Müller, who died too soon, is the artist whose style and character are illustrated.——The paper, "Imogen in Shakspeare and in Sculpture," in the October *Fraser*, reviews the statues which were submitted to the Art-Union of London in reply to their offer of 600*l.* for the best. The writer, with especial condemnation of "Imogen" as misrepresenting Shakspeare's creation, deduces from the collection that "many of our sculptors seem contented to appeal, not to the common noble features of our nature, but rather to its physical instincts and its pruriency." We do not desire to endorse the observation: we simply note it.——The *Art-Student* for the month has a good deal of instructive writing and interesting chit-chat.——Under the heading "Men I have known" (in the current number of the *Leisure Hour*), understood to be by a veteran in literature, William Jerdan, an interesting and appreciative notice is given of the late John Britton, author of the "Cathedral Antiquities." They were friends of long date, and the memoir shows that Mr. Jerdan fully understands the difficulties under which Britton ran his remarkable career. Mr. Jerdan proposes, we believe, to publish as a volume these pleasant notices of men he has known.——Amongst the reading-books for the young that have reached us is an addition to the series known as "The Magnet Stories," by Mrs. Broderip, titled "Wee Maggie." The subject is not novel, the struggles of an orphan girl; but the story is told with a good and graceful pen. We may also name in the same paragraph, "The Crosses of Childhood; or, Alice and her Friends," and "Marie and the Seven Children," by Mrs. Geldart, both published by Partridge. All are illustrated to a certain extent.

Miscellanea.

The Temple.—A handsome range of stone-fronted houses has been erected on the vacant ground in the Temple, facing the Temple gardens. Professor Smirke, R.A., is the architect. Other houses will be built hereafter to complete the façade.

Kenilworth Church.—A correspondent asserts that in the present "restoration" of Kenilworth parish church, the low window in the south chancel wall, and the sedilia, both of fourteenth century work, are condemned to destruction! Why?

Illuminations by Female Artists.—Messrs. E. Fuller & Co. offer two *prizes* for the best original composition designed and illuminated on vellum. As we read the offer, however, it seems to be little more than an endeavour to get two good designs at a very cheap rate. Exhibitors are only to be charged 15 *per cent.* on the amount of any sales that may be effected. How kind of Messrs. Fuller!

Buddha in Birmingham.—The copper statue of Buddha, 7 ft. in length, which was discovered by Mr. E. B. Harris, C.E., while excavating for a railway at Sootan, in the Bengal Presidency, has reached Birmingham, and is destined, by the proprietor, Mr. Thornton, to be placed in the Midland Institute. This statue is said to be of extreme antiquity: it was found 10 ft. below the surface, and underlying the covered ruins of a temple, which must have been built upon the site, of a still more ancient temple or monastery amongst the ruins of which the statue was found. It is entire except one of the feet, and is reported to be of masterly workmanship. The age of it is called 2,500 years.

Water Supply for Gainsborough.—A waterworks company is about to be formed at Gainsborough. A good many shares, we learn, have already been taken.

Rochdale Borough Surveyorship.—On the 6th, Mr. Alfred Fowler was appointed borough surveyor of Rochdale. There were fifty-five applicants for the office.

Surrey County Hospital.—The last four numbers of the *West Surrey Times* contain a long account of the county hospital now progressing towards completion; from the designs of Mr. E. W. Lower. Mr. W. Barnes is the builder; the amount of the contract, 11,303*l.* The total cost is expected to be about 15,000*l.*

Missing Almshouses.—A Tewkesbury paper states that the late Mr. John Dent left 8,000*l.* to the town of Winchcomb to build and endow almshouses and schools at the expiration of four years from his decease: he died in October, 1855 (nearly nine years ago), and not one stone of either building has been laid yet.

Preservation of Wood.—The following method is used in Germany for the preservation of wood.—Mix 40 parts of chalk, 40 of resin, 1 of linseed oil, melting them together in an iron pot; then add 1 part of native oxide of copper, and afterwards, with care, 1 part of sulphuric acid. The mixture is applied while hot to the wood by means of a brush. When dry it forms a varnish as hard as stone.

Valuations under the Lands Clauses Act. In the case of Cotter *v.* The Metropolitan Railway Company, a valuation made by a surveyor, appointed under the provisions of the 85th section of the Lands Clauses Consolidation Act, 1845, who never entered the buildings valued, was held by Vice-Chancellor Kindersley not to be a proper valuation within the meaning of that section.

The Old Town-wall of Southampton.—We are glad to observe that the town council have at last resolved, by a majority of sixteen to fourteen, to purchase the site on which the fragment of the town wall stands, which was lately redeemed from immediate destruction as building materials, so that the relic will be permanently secured. Some of the councillors, however, still threaten further opposition to the granting of the requisite money—some 300*l.*,—although it will yield 3 per cent. per annum on the outlay.

"Westminster Chapel."—With reference to the view we recently gave of new Westminster Chapel, the Secretary of the Committee says,—"I shall be obliged by your stating that the building referred to is being erected for the church and congregation long established on the same spot, under the pastorate of the Rev. Samuel Martin, to take the place of a much smaller building erected in 1841, the accommodation afforded by which proved insufficient for the congregation; and is not, as might be inferred, a new undertaking of the Congregational body. In reference to the statement as to the heating of the building, I beg also to say that the committee have not yet come to any decision as to the system to be adopted, and have, as yet, simply made such provisions as would be necessary in any case."

Liverpool Architectural Society.—The first meeting of the seventeenth session was held on Wednesday, the 5th, Mr. Joseph Boult presiding. The chairman called the attention of the members to a view of the interior of the newsroom of the New Exchange, which had been left there by Mr. Wyatt, the architect. It was announced that a prize for the best view of Duke-street, looking towards the Sailors' Home, had been awarded to Mr. N. G. Taylor. The chairman delivered an address, in which he said it was sixteen years since the society was instituted; and to those who remember the state of the profession in the town at that time it was manifest that the society had been very serviceable, but its beneficial effects might be augmented. He referred to the unwillingness of some architects to join the society, and said it was important to beware lest *esprit de corps*, so valuable within proper limits, degenerated into exclusive and vulgar arrogance. Professional training was very good, but it would not create an architect of the highest order. He invited co-operation in the healthy working of the society. He also commented upon the report of the town improvements projected and in progress, and advocated play-grounds and large public parks.

The Drinking Fountain Movement.—A fountain has been erected in Hull, at the cost of Mr. R. Sykes, and was recently inaugurated by the mayor.

Isle of Man.—The Public Works Loans Commissioners have granted a loan of 52,800*l.* to the Isle of Man Harbour Commissioners, to be applied to the construction of a breakwater at Port Erin.

Quebec Custom-house Burnt.—The costly new Custom-house at Quebec, finished only in 1860, has been destroyed by fire, probably originating in connexion with the plumbers' work which had been going on for some days on the roof.

New Masonic Hall at Hartlepool. The members of the Harbour of Refuge Lodge of Freemasons, No. 764, of West Hartlepool, have laid the foundation-stone of a new Masonic hall. The building site is in the vicinity of Christ Church, nearly opposite the National Schools. The new hall will be a stone erection, and will afford large accommodation. The architect for the building is Mr. J. Tilleman, of Sunderland; and the builder, Mr. J. Johnson, West Hartlepool.

Water Supply at Horsforth.—The late scarcity of water having been seriously felt at Horsforth, a number of the inhabitants of that place resolved to form a joint-stock company for the purpose of establishing waterworks. Engineers were invited to compete, a premium of 50*l.* being offered for the best set of plans submitted. The directors received eight designs, and from them selected as best one received from Mr. McLandsborough, C.E., who has been instructed to carry out the scheme.

The Sheffield Inundation Commission.—The first meeting of the commission constituted under the Water Company's (Bradfield Inundation) Act, to ascertain and assess the claims against the company arising out of the disaster in March last, took place in the town-hall, Sheffield. The proceedings were held in the sessions-court, which was crowded during the day by numbers of the working classes, many of whom had, no doubt, an interest at stake. The commissioners are three in number, the chief being Mr. Wm. Overend, Q.C., and his colleagues, Mr. J. J. Smith, J.P., and Mr. M. F. Mills, estate agent, Chesterfield. The Water Company were represented by Mr. B. Smith, and there was a numerous attendance of gentlemen of the legal profession interested on behalf of the claimants. The Act gives to the commissioners very extensive powers. Their orders have all the effect of a verdict at *nisi prius*; and there is no appeal from their decision. After various cases were heard and disposed of, the sitting was formally adjourned until the 7th of November.

A Smoke-consuming Furnace.—There is in operation at the engineering works of Messrs. Moreland, Old-street, City, a furnace patented by Mr. E. B. Wilson, which is said to economise fuel to a considerable extent, and which may be rendered almost smokeless. This furnace, which is used for heating rivet bars, has no fire-bars. It consists of a chamber, or box, at the back, to contain the fuel, and a reverberating oven connected therewith, the flue being at the other end of the oven, and connected with the ordinary chimney-stack. The coals are ignited in the box, to which they are supplied about twice a day. As there are no fire-bars in the furnace, the air enters upon the surface of the fresh coal in the box, causing a downward draft, as the floor of the reverberating oven slants downwards from the coal-box. The gas is thus slowly and continuously distilled until it comes in contact with the lower strata of burning coals, when it receives its proper dose of caloric, and passes into the reverberating oven, heating any material that may be placed there, and passes away downwards by the flue which descends at a point a little inwards from the mouth of the oven. The principle adopted seems to be simply that of turning a common fire upside down, not unlike "the *Builder's* Fire," or a furnace back foremost, so that the fresh coal is applied at that end whence the smoke of its first ignition goes through the fire and is consumed, instead of being placed on the end of the fire, whence the direction of the draft carries it off as soon as evolved. The principle is very simple, and probably efficient, though not novel. The Messrs. Moreland, we believe, have no special pecuniary interest in the invention.

Guernsey.—A ladies' bathing-place, at the Vallette, Guernsey, is to be commenced forthwith, and is to be completed by the close of the year. It will consist of a broad platform, 25 ft. in width, extending from the slip at La Vallette in a northerly direction, and abutting on a ridge of rock which is found there. A flight of steps will conduct from the platform to the bottom of a gully formed by nature, between the aforesaid ridge of rock and another lower ridge on the south side of the gully. Mr. John Duquemin is the contractor.

Monumental.—At a meeting of the Wolverhampton Albert Memorial Committee, it has been unanimously resolved that Mr. Thornycroft, the sculptor, proceed with the work; the mayor to move in council for permission to use the site now occupied in the High Green by the Russian cannon. The memorial will be an equestrian statue, larger than life, and its cost, with conversion of the gun pedestal, will be about 1,150*l*. —— Sir Roderick Murchison writes to the *Times* that his geographical friends and himself have resolved to move for the erection of a suitable monument to Captain Speke. He appeals for contributions. —— Foley's statue of Father Mathew, the apostle of temperance, was unveiled on Monday, in Cork. The pedestal, which is from a design by Mr. Atkins, architect, is 9½ feet high, of limestone, and contains on either side a drinking-fountain. The principal stone in the pedestal weighs over three tons. The figure, which is cast in gun metal, weighs 33 cwt., and stands 8½ feet high.

Building Operations at Freshwater, Isle of Wight.—A private company have purchased 400 acres of land for building purposes, in the parish of Freshwater, and including Alum Bay. A hotel is now building there at a cost of 5,500*l*., the architect being Mr. Frere, of London, and the builder, Mr. Wheeler, of Cowes; and a house, containing sixteen rooms, is also nearly finished in the immediate neighbourhood of the new hotel: in addition, a London building firm have just secured twenty acres of the land, upon which they intend erecting a number of villas, at a *minimum* cost of 1,600*l*. each; and for the accommodation of the population a new church is to be erected at a cost of 2,500*l*. A new road, of an average width of 33 feet, exclusive of the footpaths, has been already made from the New Hotel to Weston, and this road is to be carried on from the latter place into Yarmouth at the cost of the Highway Commissioners.

Iron.—The *Iron Trade Circular* says,—"At the preliminary meeting of the Ironmasters' Association, held on the 29th ult., at Birmingham, it was resolved unanimously 'That the prices of iron remain the same as fixed on last quarter day.' With a similar unanimity the meeting adopted the further resolution 'That, in the opinion of this meeting, the most determined resistance should continue to be offered to the demands of the colliers now on strike, as well as to those of the men whose notices are about to expire; and if, by the continuance of their disgraceful and illegal practices and acts of intimidation towards both men and masters, in this and other districts, the supply of coal is still further diminished, the members of this meeting will be prepared to blow out their furnaces and shut up their mills and forges.' Prices stand at, —pigs (best hot-air), 3*l*. 5s. to 4*l*. 5s.; seconds, 3*l*. 10s. to 3*l*. 12s. 6d.; cinder pigs, 3*l*. to 3*l*. 5s.; hæmatites, 3*l*. 10s.; Forest of Dean, 3*l*. 15s. to 4*l*. 5s.; North Staffordshire pigs, 3*l*. 5s.; Cleveland pigs, 3*l*. 2s. 6d. to 3*l*. 8s., long weight, delivered into this district. Manufactured iron, —bars (marked), 8*l*. 10s.; hoops, 9*l*. 10s.; sheets, singles, 10*l*.; doubles, 11*l*. 10s.; lattens, 13*l*. All other descriptions in proportion at makers' works. The Midland district of England, and the central hive of industry, is almost in a state of insurrection, so far as the working population are concerned: 300 police are kept on the alert night and day, and the volunteers (a new employment for our national defenders), have been mustered and kept under arms lest the colliers on strike should march (as they promised) into Birmingham for other purposes than begging. Such a state of things has not been witnessed since 1836. Nor is the mischief likely to rest here. Owing to the commercial treaty between England and France, several reductions of duty, of great importance to the iron trade, have come into operation. Cast iron, which is subject at present to an import duty of 2*f*. 50c. the 100 kilogrammes, will pay 2*f*. Bar iron, which pays at present 7*f*., will pay 6*f*."

Manchester New Town-hall. — The City Council have decided, by a majority of one, in favour of the Albert-square or police-yard site for their proposed new town-hall. It has been resolved to go to Parliament for powers to purchase this piece of land, and to apportion the outlay between the two townships.

Workmen's Shakspeare Memorial.—A meeting of the Executive took place at St. John's Gate, Clerkenwell, on Tuesday evening. A long list of subscribers having been read over, in which many well-known names appeared, it was reported that sheets of the Shakspeare Heads, containing seventy penny receipts, were now ready to be issued to persons who felt an interest in the movement, and that a large number had already been applied for from benefit, trades, and working men's literary societies.

Value of Land, Newport.—Last week several lots of freehold and copyhold land were sold by auction at the Crown and Anchor Inn, Newport, near Staddlethorpe. Lot 1 was a close of arable land, in the township of Gilberdike, containing upwards of eight acres: it was sold to Mr. J. Shaw, of Newport, for 450*l*. Lot 2 consisted of two closes of arable land at Eastrington, called "Two Nine Acres," containing, as the name implies, eighteen acres. This was bought in at 1,000*l*. Lot 3 comprised a close of arable land, and was six acres in extent. Mr. G. Scruton, of Newport, was the buyer at 265*l*. Lot 4, a close of swarth land, comprising three acres, was sold to Mr. Wm. Oliver, of Wallington, for 181*l*. Lot 5, a close of swarth land, containing four acres, was knocked down to Mr. F. Leak, of Hotham, for 315*l*.

The London Association of Foremen Engineers.—At the last ordinary monthly meeting of this society, at its rooms, in Doctors' Commons, City, the business transacted was principally connected with the position and prospects of the institution. The number of members, honorary and ordinary, was stated to be over 100. The funds amounted to about 400*l*. It was determined that no candidate for ordinary membership could in future be received after he had attained the age of fifty years, and that a majority of votes in the proportion of four to one should be substituted for the unanimous vote hitherto required. Mr. J. Newton (who presided) strongly urged upon his fellow-associates the necessity for their production of a regular series of papers, to be read at the meetings to be held during the ensuing winter. Some new members were elected.

Melting and Casting Steel and other Metals.—A new system has been patented provisionally by Mr. Rochussen, who claims for it the advantage of great saving in labour, fuel, fire-clay, crucibles, furnace-bars, &c., and in shortening the time required for melting, and running less danger of injury to the metal by the action of oxygen, carbonic oxide, carbon, and sulphur. The temperature of the furnace is said to be completely under control. The patentee claims, as entirely new and peculiar, the principle of,—1st, casting without removing the crucible from the furnace; 2nd, that of filling the whole capacity of the crucible with molten metal, by means of charging the hollow cover. A description of the invention would require to be illustrated by engravings.

TENDERS.

For new Roman Cath. de Church, Widnes, near Warrington, for the Bishop of the Diocese. Mr. Pugin, architect:—

	For entire Church.	For Nave alone.
Wards	£4,397	...
Middlehurst*	3,250	£2,595
Glaister	3,220	2,600
Hughes	3,100	...

* Accepted.

For new manufactory and engine-house, offices, stabling, &c., at the Fulham Potteries, for Mr. C. J. C. Bailey. Messrs. Eggar & Stapley, architects. Quantities supplied.

Messrs. Dawson	£2,877	0	0
Aviss & Son	2,648	0	0
Adamson & Sons	2,639	0	0
Greig	2,626	0	0
Whigmore & Whittick	2,540	0	0

For St. Philip's Parsonage, Stepney. Mr. A. W. Blomfield, M.A., architect. Quantities supplied by Mr. J. A. Bunker:—

Warskett	£1,740	0	0
Woods	1,443	0	0
Dudley	1,440	0	0
Wheeler	1,436	0	0
Browne & Robinson	1,415	0	0
Hill & Co.	1,395	0	0
Turner & Sons	1,389	0	0
Child & Son (accepted)	1,369	0	0

For a beer-house and offices, at the North Camp, Aldershott, for Mr. J. H. Daveran. Messrs. Eggar & Stapley, architects:—

Duke	£576	0	0
Goddard & Son	555	0	0
Birch	530	0	0
Martin	513	0	0

For new Wesleyan school-room, &c., Penge. Mr. F. Boreham, architect:—

Warne	£935	0	0
Knight	712	0	0
Richards	637	0	0
Palmer	587	0	0
Thompson (accepted)	576	0	0

A SHORT HISTORY OF THE INVENTION,

WITH A DESCRIPTION OF

THE MANUFACTURE AND APPLICATION

OF

BUNNETT & CO.'S REVOLVING IRON SHUTTERS,

Bronze and Iron Shop Fronts, and Steel Mantelets for Men-of-War;

WITH A

FURTHER ACCOUNT OF THEIR ADVANTAGES AS A PROTECTION AGAINST FIRE AND BURGLARY.

REPRINTED FROM "CHAMBERS'S JOURNAL," *OCTOBER* 15, 1864.

THE LONDON SHOP-FRONTS.

THERE are few people who have not been struck with the magnificence of the London shop-fronts. They form one of the most prominent indications of the grandeur and wealth of the metropolis. Enormous plate glass windows, gilded or polished brass frames, expensive mirrors, polished mahogany frames, and all sorts of fancy woodwork, sometimes crystal colonnades, and generally a singular covering of iron Venetian blinds, which roll up and down by intricate machinery, like a stage curtain displaying or concealing the gorgeous scenery within—these are the necessary decorations of a fashionable London shop of the middle of the nineteenth century.

The whole system of the London shop-front decoration may be properly analysed into three divisions,—namely, 1. Plate-glass Windows; 2. Ornamental Brass Sash-bars; 3. Revolving Iron Shutters.

Regarding the plate-glass windows, however, we shall have very little to say. The process of the manufacture of plate glass, together with its multifarious application in the decorative arts is familiar to all. Still, we may point out that the fiscal regulations of this country with respect to plate glass for many years interposed the most serious obstacles to its important uses; that it was not until the duty was removed by Sir Robert Peel that it came into free use; and that the consumption has now increased to an extent which has no parallel in the history of fictile manufactures. The origin of plate-glass decoration carries us back to the Italian cities of the Middle Ages, to the magnificent period of the Venetian republic. It reached its height, perhaps, as an artistic development at the French court of Louis XIV. although there are larger plates in the Palais Royal and the Louvre at the present day. The Parisians, who, it must be admitted, are our masters in the principles of interior decoration, are exceedingly lavish in their expenditure of plate glass, particularly in the form of mirrors; but we think the English shops them in the matter of windows. These, indeed, have sometimes reached a size so enormous that we hardly know how to estimate their cost; and they have properly become the subject of a special form of assurance, where their risk of destruction or fracture is guaranteed at a certain moderate premium on the cost. It will be remembered, of course, that, by the common law of the country, a shopkeeper cannot recover more than the statutory sum of two-and sixpence for an accidental fracture of his plate-glass windows: and this was abundantly proved during the proceedings instituted against the civil authorities which sprang out of the Clerkenwell riots. Some of the largest windows in London contain from two hundred to three hundred pounds worth of plate-glass; and windows with extraordinary large plates, such as occur in Oxford-street or Regent-street may amount to twice the value.

The original brass window frame, or sash-bar, was made of pieces of brass cast in short lengths, and soldered together. There were certain difficulties, however, always experienced in making good work and an elegant finish in this kind of work. For example, the castings were not always of the same colour; the joints were easily seen, and the metal being sometimes porous or honey-combed, as is the case in all castings, absorbed the polishing-paste or other impurities, and looked very ugly. To obviate these disadvantages, the French hit upon the expedient of making the bar out of one single length of sheet-brass, with an interior skeleton of wood. Brass sash-bars, as we now see them, are therefore a French invention, although they have been much improved in principle of construction by the present manufacturers. The French invention formed the subject of a patent in this country by the late Mr. Richard Cureton, of Brentford, from whom Messrs. Bunnett & Co. of Deptford, purchased it about the year 1838 or 1839. The invention was then in a very crude state; and, in order to carry out their plans of improvement, the latter-mentioned engineers constructed for their manufacture one of the most powerful draw-benches in the kingdom, on the model of that employed in her Majesty's Mint, capable of drawing very large mouldings and sash-bars in all manner of sectional forms, from the square to the circle, and in every variety of ornamental design. What appears a solid brass window-frame consists, therefore, in reality, of a stout, well-seasoned oaken centre or core, supplied with a thin outer covering of sheet-brass. The method of manufacture is highly ingenious. In the first place, the seasoned oak or other hard wood—mahogany, we believe, is often used—is cut into the required form by one of those singular moulding-machines which gave so much offence to the operative joiners at the builders' strike. Then a length of sheet brass is cut to the required width, and shaped in order to correspond with the outline of the wooden moulding or bar. The wood is then placed in this shell; and with suitable top-dies of a peculiar formation, the outer edges of the metal which project beyond the wood are turned over and so firmly compressed—metal and wood, *core* and *case*—as to resemble a solid substance; indeed, we believe that one of these bars may be cut into thin slices on the section, not thicker than a sixpence, and yet retain its coherence as firm as if made of solid metal. The sheet brass makes a better surface and receives a better polish than the old cast brass sashes which were once in use; and strange enough it would seem (but easily understood by those who are acquainted with the statics of hollow beams), that the bar with the wooden core is much stronger than one made of solid metal, and will resist probably ten times as great a lateral pressure—a pressure, for example, arising from the thrust of a crowd. It should be explained that this is partly due to the iron tongue which travels the length of the bar, and serves at once as the rebate for the reception of the glass, and as an additional support. After being polished by the usual process, these brass bars are mitred at the corners; and after being screwed together in their place, are ready for the reception of the plate glass. The sizes of these sash-bars vary from 1 inch to a foot, or 15 inches in circumference. Some of their designs are very beautiful; and the Greek ogee moulding predominates as an architectural type.

The brass window frame which contains the plate-glass has a peculiar bar base, which is technically termed a "stall-plate;" it is the plate on which the shopkeeper's name and occupation are usually displayed. It had its name, we suppose, when the London shops in reality resembled in the literal title of stalls, before the era of plate glass and brass bars; but now it is simply used for the purpose we have named.

The groundwork or shield on which the shopman may emblazon his title and degree. The stall-plate, which is an indispensable adjunct of the whole work, is manufactured partly in the same way as the sash-bars, by being drawn through steel dies to the required shape, which is usually that of an ogee or double curve. The engraving on some of these brass plates is worthy of notice. It is a branch of art of itself.

The ornaments connected with brass fronts, such as those on the bases and capitals and between the spandrels of the arches, are for the most part cast from original models, and in harmony with the designs supplied by the architect of the building. These designs in London are not restricted to one particular school of art. A cursory glance along Oxford-street or Piccadilly will supply instances of every style of architecture under the sun. The highest form, and that which is most in vogue, is the pure Greek type—of this, one of the best examples in London is Hodge & Lowman's in Regent-street. Maclean's in Fleet-street, is a gorgeous specimen of the French decorative school. Hyam's, in Oxford-street, is a magnificent example of the Tudor. Copestake's, in Bow Churchyard, is richly ornamented Norman. Gibbs's Chappell, in New Bond-street, was designed by Mr. Owen Jones, and is, of course, the purest Alhambra—even to the letters on the stall-board! The most wonderful display of brass and plate-glass in all London is, perhaps, that of Moses & Son, in Aldgate and the Minories, their fronts, however, so far as we can see, do not belong to any particular school, but are a compound of all. Castellated bars, rounded and bronzed, are also used extensively in shop-fronts. They can be made quite as ornamental, and are more economical than brass; and the public taste is at this moment running a good deal in this direction.

Revolving iron shutters are a modern invention. They have not been in use for more than thirty years, and the introduction of this useful and ingenious contrivance for the protection of property from robbery, from fire, and from riot-commotion, was due in a great measure to the late Duke of Wellington, who introduced them into Apsley House. It was in the year 1817 that Messrs. Bunnett & Co. obtained their original patent; and their shutters were first applied to the premises of Swan & Edgar, in Regent street, where our readers have often doubtless observed them. Nearly all the banking and insurance companies are also supplied with them; then the goldsmiths and jewellers; and now there is hardly a respectable shop of any description erected without them. They are besides, in very general use throughout the Continent of Europe and America, as well as the British Colonies. Some of the most expensive shop fronts in the world are to be seen in Melbourne, in Australia. Although, revolving shutters are for the most part made of iron, always so for banks and goldsmiths' shops—generally so for the windows of ordinary places of business—yet, where greater elegance is required, they are frequently made of bright or oxidized brass or copper. Where economy is more studied than elegance, they are made of wood; but whether made of wood or metal, the principle of a revolving shutter is the same, being all constructed of narrow strips or laths, varying from one to two inches in width, connected together with wrought iron hinges, and revolving round an iron roller at the vertical side or bar partially, as required by the convenience of the window, when they are opened or shut. In large shutters, they are wound up or down by a worm and wheel gearing; if small shutters, with a simple arrangement of balance-weights, like the ordinary window-sash. At first, the expense of these shutters was very great, and deterred many from their use; but now that powerful machinery is applied to their manufacture, the cost, we believe, has been reduced to something like one-half of what it was originally. In fact, it may be seen that revolving shutters are gradually superseding the old-fashioned wooden shutters for all but the more humble description of shops, and we do not think the public need regret this, seeing the risk attending their being put on; nor the poor shopmen, who were kept so frequently putting them on. The large shutters are made like a sheet of canvas, or up and down like a weak suspension-bridge. Accordingly they have been generally superseded by a lath of convex shape, which was patented in 1844; which, again, in 1850, was improved on by inflecting the lath into an ogee or curvilinear form—a form which is found to combine the maximum of strength with the minimum of weight.

These "curvilinear shutters," as they are called, are made at Deptford, from iron hoops of the best quality, which are formed into the required curve, by drawing them through steel dies. The laths are then passed under a very quick acting till-hammer, with polished steel head and anvil, which makes them very stiff, and hardens and straightens them at the same time. They are then punched for riveting on the hinges in a press, which makes all the holes at once; and the hinges themselves are punched at the same press, which insures perfect accuracy in the fitting on. The hinges are manufactured by a variety of ingenious processes, which we have no room to describe; but they are all made by machinery—a file or a drill is never employed. The laths are then taken, one by one, and placed on a bench; the hinges are riveted on in rows at a certain distance; when the required number of laths are thus fastened together—one hundred or two hundred, perhaps—the revolving iron shutter is complete. The machinery for winding and unrolling is too technical to be of interest, although highly ingenious. We shall only notice further the last improvement in this direction, which is termed the "interlocking shutter."

The "interlocking revolving shutter" is an American invention, and certainly an ingenious one. They are formed without either hinges or rivets. The patent refers to nothing more than a method of doubling or contouring, so to speak, the edge of the one hoop round the other, so as to constitute a kind of hinge—making the whole shutter one series of hinges, in fact, turning on their own axis. This is accomplished by a ponderous and expensive machine made for the purpose, which is, we believe, the only one of its kind in the world. The two edges of the lath being turned over in a volute—the one somewhat longer than the other—the two are joined together by simply sheathing the one in the other; and as this joint is perfect from end to end, no force can possibly separate them. These interlocking shutters, of themselves so strong, can nevertheless be made very light, and are therefore suitable for fixing inside of rooms with existing windows. We believe they can be made to work without gearing by a system of graduated balance weights, so easily that a child or a female servant can manage them; and they are, we are told, particularly well adapted for a state of society where brigandage prevails, as in Italy; where assassination is frequent, as in the west of Ireland; and particularly where burglary is not uncommon, as in certain districts of county England. Indeed, the great recommendation of these iron shutters consists in the fact, that they are all more or less "fire-proof, thief proof, and bullet-proof."

With regard to the use of iron shutters for safety against fire, this was curiously exemplified in a recent conflagration in the City. "The large and handsome warehouses"—we quote from the "Times" of 22nd December—"of Messrs. J. & R. Morley, situate at the corner of Gresham and Wood Streets, overlooked by a large window on the ground-floor at the back of the little court in which the fire originated, and to which it was at first confined. This large window was protected on the outside by a revolving iron shutter, and that more against robbery than fire. For some time the flames played fiercely and harmlessly about the outside of the window so guarded by the iron shutter. Had they once entered Messrs. Morley's premises at that point, the stock stored inside, and estimated at from 250,000*l.* to 300,000*l.* would inevitably have been destroyed, if, indeed, the devastation would have ended in that one vast pile of buildings. Upon such a slender condition of safety did property almost fabulous in value, and belonging to a single firm, depend in this case."

The use of iron shutters of the kind described, as a preventive of robbery, has been found of the highest value. It is quite impossible to open them from the outside; it is quite impracticable to "cut through a panel" or to "force a hinge." We have it on the authority of an experienced City detective that the most expert "craftsmen" never venture to attack these iron-clad windows. They have a greater affection for the old wooden shutters, which yield so freely to their ordinary implements.

With regard to their application to warlike purposes, to which, in these days, all such inventions are more or less subordinated, we have to report a most novel and singular application of the principle by the Spanish Government, who had constructed on London a series of revolving "steel mantelets" for the protection of the crews of their vessels of war, when proceeding up the Mersey rivers. The pirates were in the habit of picking off the men on board, from stations on the banks; and to prevent this half-practice, these mantelets—made of steel strips, about 3 inches wide, and strongly hinged and curved, so as to make the balls glance off—were hung at the sides of the vessel. When not in use, they were rolled up and stowed away. Of course, they were not intended to act as defences against an Armstrong gun!

Finally, with regard to their important uses in civil commotion—of which this country is happily so free—we may remark that iron shutters are rapidly being introduced into all the thoroughfares of the principal cities of continental Europe. They have long been used in large towns of the United States. The value of property in Paris during the last *coup*, and in New York during the late riots, from this protection, was almost incalculable.

NOTE.—All the SHOP-FRONTS, REVOLVING IRON SHUTTERS, and STEEL MANTELETS, referred to in the foregoing Article, were

Manufactured by BUNNETT & CO.

NEW CROSS WORKS, DEPTFORD, KENT.

JEAYS' SYSTEM OF HAND-RAILING.
Just published, second edition, 8vo. price 5s. 6d.

THE ORTHOGONAL SYSTEM of HAND-RAILING, with Practical Illustrations of the Construction of Stairs. Second edition.

By JOSHUA JEAYS.
London: SIMPKIN, MARSHALL, & CO.

MONEY on FREEHOLD and LEASEHOLD PROPERTY, by the MUTUAL LOAN FUND ASSOCIATION (Incorporated by Act of Parliament, 18 & 19, 14, RUSSELL STREET, COVENT GARDEN, W.C. Advances from 100l to 1000l, upon Freehold and Leasehold Property, for any term up to ten years. Mortgages redeemed and the advance can be repaid by easy instalments. Facilities afforded to tenants to purchase the houses they occupy, and the repayment of the advance taken as rent. Greater advantages are offered to borrowers than in building societies, there being no shares to subscribe for, or competition for an advance, and no deduction from the loan. No preliminary fees. Prospectus and forms of proposal sent on receipt of a directed stamped envelope.
EDWARD HARPER, Secretary.

BRECON NEW WATER-WORKS. — LOANS ON MORTGAGE DEBENTURES — The Local Board of Health of the Borough of Brecon hereby give notice, that they are ready to receive PROPOSALS for LOANS, bearing interest at 5l per cent. per annum of sums of 50l. and 100l. on the security of Mortgages of the General District Rates of the said Borough, granted under the sanction and authority already officially given of Her Majesty's Secretary of State for the Home Department. Communications to be addressed to the undersigned, at the Office of the Board, Strutt, Brecon.—By order,
STEP. B. EVANS, Clerk to the Board.
Brecon, 14th September, 1864.

TO BUILDERS.—A Gentleman can obtain ADVANCES for BUILDERS, on their finished or unfinished property, or Advances as their works proceed. Address (in the first instance), H. S. T. 68, King William-street, City.

MESSRS. LAKE & HOPKINSON,
ARCHITECTS and CONSULTING SURVEYORS.
Quantities of Artificers' Work accurately taken
Office, No. 1, ADELAIDE-PLACE, LONDON BRIDGE, E.C.

PERSPECTIVES, GEOMETRICAL and other DRAWINGS,
MADE and COLOURED by the Advertiser, from rough Sketches or otherwise
ADDRESS, C. 70, CAMBERWELL NEW-ROAD, S.

MR. JAMES FENTON, ENGINEER and SURVEYOR for six years to the Croydon Local Board OFFICES REMOVED to 19, GREAT GEORGE-STREET, WESTMINSTER.

RAILWAY and ESTATE SURVEYING and LEVELLING.
In any Part of the Country.
By C. C. No. 17, Hill-street, S.W.

CIVIL ENGINEERING & SURVEYING.
PRACTICAL FIELD INSTRUCTION given in Civil Engineering, Surveying, Levelling, &c. on moderate terms.—For Prospectus apply at the Offices of Messrs. HYDE, SMITH, & LEWIS, Civil Engineers, Surveyors, Architects, &c. 24, Gut le-st-street, Russell-square. N.B. Day and Evening Instruction given in Architectural Drawing, Colouring, Taking out Quantities, &c.

MR. MARDON, ARCHITECTURAL DRAUGHTSMAN and COLOURIST. Perspectives, Competition, and other DRAWINGS prepared.—Address, Bedford Chambers, Southampton-street, Strand, W.C.

TO ARCHITECTS, &c.
JOHN EDWARD ORMES continues to prepare Bills of Quantities, Designs, Estimates, Specifications, measure up works, Survey Dilapidations and Railway Compensations, either by Commission or by special agreement.—Address, 64, Leadenhall-street, E.C.

PARLIAMENTARY WORK.—An expert, accurate SURVEYOR and LEVELLER, of long experience, is open to an ENGAGEMENT.—Address, H. G. Post-office, Plymouth.

TO ENGINEERS, SURVEYORS, CONTRACTORS, &c.
STANDIDGE & CO. LITHOGRAPHERS, DRAUGHTSMEN, &c.
38, Old Jewry, City, E.C.
Are prepared to execute plans for Parliamentary deposit, and every other description of Lithography, to any extent, with promptitude and economy.

DRAWING CLASSES, ONE GUINEA PER QUARTER. Evenings from 7 to 10, for giving INSTRUCTION in ARCHITECTURAL and MECHANICAL DRAWING, Colouring, Taking out Quantities, &c. &c. Apply at the Offices, 24, Guilford street, Russe l square.

TO CIVIL ENGINEERS AND SURVEYORS.
PARLIAMENTARY WORK.—An ENGINEER and SURVEYOR, of long experience, is open to an ENGAGEMENT.—Address, K. M. No. 2, Grosvenor-villas, Stockwell-green, S.

PARTNERSHIP.—An ARCHITECT, of general practical experience, is desirous of connecting himself as a PARTNER permanently with another whose extensive and remunerative practice would admit of an ample and fair share of income being obtained therefrom, or an equivalent for professional services and capital rendered by the advertiser. F. M. S.—Communications to be addressed, care of Mr. Arnold, Stationer, &c. 86, Fleet-street, London.

A SURVEYOR WANTED, for PARLIAMENTARY WORK. Also a DRAUGHTSMAN, used to mapping, for the same.—Apply by letter to W. B. No. 21, Bertha Villas, Thornhill-road, N.

A GAS ENGINEER REQUIRED, to design, carry out, and superintend the erection of small Gas Works in the country.—Particulars may be obtained by applying to Mr S. S. MOSSOP, Solicitor, Long Sutton, Lincolnshire

---

AN ARCHITECT has VACANCIES for an ARTICLED PUPIL and for a JUNIOR DRAUGHTSMAN.—Apply, stating terms, to Mr. JAMES HIBBERT, 19, Fishergate, Preston.

MASONS.—WANTED, Two or Three Good SLATE MASONS.—Apply to ALFRED BRABY, Slate Works, Bangor Wharf, Belvedere-road, Lambeth.

POTTERIES, LAMBETH.—WANTED, a thoroughly experienced BURNER, for Double-glazed or Bristol Ware.—Apply, stating qualifications, wages required, &c. to J. S. London Pottery, Bush-street, Lambeth, S.

TO MASONS AND MINERS.
REQUIRED, in Ceylon, MASONS and ROCK MINERS, to superintend railway work.—Apply, in first instance, with testimonials, to W. F. FAVIELL, Railway Contractor, 13, Southampton Buildings, Holborn, London, W.C.

Delivered to Vessels in the Lock at the Kilns, in the River Medway.
Pattern Sheets, and all information, may be had of
R. LANGLEY, Agent, East Cowes park, Isle of Wight.

TO BRICKMAKERS.—All Parties who BURN BRICKS in CLAMPS are invited to inspect the NEW MODE of SETTING, practised by Mr. ROBERT WHITE, and which may be seen in operation at the Brickfields of
J. B. WHITE & BROTHERS, Erith, Kent.
The advantages of this plan are two-fold.
1st. Nearly all the bricks are burnt into stocks, and the yield of inferior bricks is reduced from 35 to about 10 per cent of the total make, which in itself represents a large permanent saving.
2nd. The bricks are so much improved in colour and soundness as to give them a considerable additional value in the market over common stocks.
Licenses for use of the Patent granted to Brickmakers, on application to the Patentees 17, Millbank-street, Westminster.

NOTICE to BUILDERS.—Owing to a dissolution of Partnership, the whole of the magnificent and extensive STOCK of MARBLE CHIMNEY-PIECES, SLOWS, and RANGES, of Messrs. COLLINS & GREEN, at the Rotunda Works, 3, Blackfriars Bridge S. and 8, New Bridge street, Blackfriars, will be SOLD OFF at a considerable reduction. The quality and extent of this Stock is well known; and Builders and Gentlemen requiring first-class goods will find a considerable advantage over ordinary prices.
R. Cobb's Marble Works, Caledonian-road, N.

TO SCULPTORS, MASONS, BUILDERS, &c.
FABBRICOTTI, BROTHERS, Carrara.

MANUFACTORY at WALTON STREET.

LITTLE CASTERTON FREESTONE.
Apply, for prices, &c. to
OCTAVIUS N. SIMPSON, STAMFORD,
The Owner; and see Specimen in the Museum of Practical Geology, Jermyn-street, W.
This stone (which is a perfect oolite) is raised in blocks of any workable size, and is about 4 feet thick in the bed. It will stand ANY WEATHER, is much used for water-works, and for the building and restoration of churches. When used as ashlar work it is not necessary to place it bed-wise. It works freely with a tooth-saw, and is wrought at a cheaper rate than any stone in the kingdom.
*** The above WEATHER STONE is used largely by London Builders.

W. & J. FREEMAN, Merchants in the various descriptions of STONE, GRANITE, and SLATE, for Engineering and Building Purposes. Supplied direct from the Quarries, by vessel or railway. Direct communication with the principal ports for EXPORTATION. Wharf prices and estimates for special contracts, including quarry work or other labour, forwarded on application.—Office, 97, Millbank-street, London, S.W.

CAEN and AUBIGNY STONE.
FOUCARD, BROTHERS,
STONE MERCHANTS and QUARRYMEN.
Cargoes shipped to order from Caen to any port. Contracts taken
Office 10, Three Crown-square, Southwark.

THE SCOTTISH GRANITE COMPANY (Limited) are prepared to EXECUTE ORDERS in Polished, Red, or Grey GRANITE, for Monumental or Architectural purposes. The Red Granite from their quarries is more brilliant in colour than any other known, and can be obtained in large sizes. The Company are also ready to undertake Contracts for the Supply of any quantity of their material, either in blocks or ready dressed, and in lengths extending to 20 feet and upwards if required.—Specimens of the stone may be seen at the offices of the Company, 36, Cannon-street, London, E.C. and terms may be ascertained by application to the Secretary.

ABERDEEN POLISHED GRANITE WORKS.—Awarded Prize Medal in 1851, Silver Medal in 1855, and Two Prize Medals in 1862.
Red, Blue, and Grey Granite for every description of architectural construction, decorative, memorials, and general purposes.
Apply to ALEX. MACDONALD, FIELD, & CO. Aberdeen; and at London Depôts, 404, Euston-road, N.W. DAVID WILLET, Agent.

POLISHED GRANITES.—TOMBS, COLUMNS, PILASTERS, &c. &c. in RED, BLUE, or GREY GRANITE, supplied by
WILLIAM & JOHN FREEMAN,
27, MILLBANK STREET, LONDON, S.W.

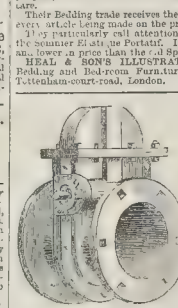
SAWN PORTLAND SLAB.—STEWARDS & CO. Portland Stone Merchants, Isle of Portland, and at Portland Wharf, Grosvenor-road, Pimlico. For List of Prices, apply to W. H. HOLLAND, 20, Grosvenor-road, Pimlico.

DARTMOOR GRANITE COMPANY.—Lairn Wharf, Plymouth, and Portland Wharf, 20, Grosvenor-road, Pimlico.—For Prices and Estimates, apply to W. H. HOLLAND, Agent and Manager for the Company, Portland Wharf.

WEARDE STONE QUARRIES, LIMITED,
The Stone produced from these Quarries has been proved to be the most durable of any in the market, and can be had for Pitching in any sizes; also for Macadamising.—Samples sent, with prices, on application to the Manager, F. M. CROKER, Gunnislake, Cornwall.

RED MANSFIELD STONE, WHITE MANSFIELD STONE.
YELLOW MAGNESIAN or BOLSOVER LIMESTONE.
Consigned in railway trucks, direct from the Quarries, in blocks not exceeding twelve tons; or worked at the Quarries and delivered free from dust at any railway station.
Mr. ROBERT LINDLEY, Mansfield Quarries, Nottinghamshire.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Wharf, Stephan Wharf, Whitefriars, Fleet-street, City. Sand from above or below Bridge, delivered by the yard or per barge. Cement of the finest or second quality, by the yard or per barge. Stocks, Lime, and Old Bricks. Dry Rubbish delivered, per barge, in any quantity alongside the Thames.



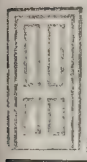
SLATES.—JONES & CO. have a STOCK of SLATES of different sorts, from the best quarries in Wales. SLABS and CISTERNS delivered at any station in quantities of not less than five tons, from the Pallas.
BANGOR, CARNSION, SALTNEY, CHESTER, and GLOUCESTER
Prices forwarded and estimates given on application
1, BOLD TERRACE, CHESTER.

CAMEL SLATE and SLAB QUARRY, WADEBRIDGE, CORNWALL.—The Proprietors of this Quarry are prepared to execute orders for SLATE of first and second quality; also for SLABS of exceedingly good quality, well adapted and suitable for Flooring, Paving, Flags for Streets, Window Sills, Chimney pieces, Shelving, Tanks, Cisterns, Troughs, and Tombs; also for Excavating and any purpose for which Stone is used. Slate can be supplied from the Quarry only, at 10s. per ton. Vessels can approach the wharf from whence the slate is shipped and be moored.—Price List, and any information required, can be obtained on application to the Manager.
Dated 28th September, 1864.

SAVING IN GAS.
D. HULETT, INVENTOR and PATENTEE. The Mercurial Gas Regulator is the only effectual instrument for insuring whole some uniform Light, by equalising the pressure, and preventing any irregularity in the height of the flame.
D. HULETT & CO. 85, High Holborn, London,
Manufacturers of Gas Chandeliers, Glass Lustres, &c. &c.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER, at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Iron-mongery, Brass Foundry, Nails (wrought and cut), Copper and Zinc; Patent Locks of all descriptions, China, Glass, and Wood Furniture, of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilators, &c.; and the New Registered Venetian Ventilator, so much admired, 6s. 6d. each.
J. H. BOOBBYER (late STURCH & BOOBBYER), established nearly 200 years, for the supply of GOODS of the BEST MANUFACTURE, at the LOWEST PRICE.
14, Stanhope-street, Newcastle-street, Strand, London, W.C.

THE FURNISHING OF BED-ROOMS.
HEAL & SON have observed for some time that it would be advantageous to their Customers to see a much larger selection of Bed-room Furniture than can conveniently be displayed, and that to judge properly of the style and effect of the different descriptions of Furniture, it is necessary that each description should be placed in separate rooms. They have therefore erected large and additional Show-rooms, by which they are enabled not only to exhibit their Show of Iron, Brass, and Wood Bedsteads, and Bed-room Furniture, beyond what they believe has ever been attempted, but also to provide several small rooms for the purpose of keeping complete suites of Bed-room Furniture in the different styles.
Japanned Deal Goods may be seen in complete suites of five or six different colours, some of them light and ornamental, and others of a plainer description. Suites of Stained & Polished Deal Gothic Furniture, Polished Deal, Oak, and Walnut, are also set apart in separate rooms, so that customers are able to see the effect as it would appear in their own rooms. A suite of very superior Gothic Oak Furniture will generally be kept in stock, and from time to time new and select Furniture in various woods will be added.
Bed Furniture are fitted to the Bedsteads in large numbers, so that a complete assortment may be seen, and the effect of any particular pattern ascertained as it would appear on the Bedstead.
A very large Stock of Bedding (HEAL & SON'S original trade) is placed on the BEDSTEADS.
The stock of Mahogany Goods for the better Bed rooms, and Japanned Goods for Boom and Servants' use, is very greatly increased. The entire Stock is arranged in eight rooms, six galleries (each 120 feet long), and two large ground floors, the whole forming as complete an assortment of Bed room Furniture as they think can possibly be desired.
Every attention is paid to the manufacture of the Cabinet-work, and they have just erected large Workshops on the premises for this purpose, that the manufacture may be under their own immediate care.
Their Bedding trade receives their constant and personal attention, every article being made on the premises.
They particularly call attention to their Patent Spring Mattress, the Sommier Elastique Portatif. It is portable, durable, and elastic, and lower in price than the old Spring Mattress.
HEAL & SON'S ILLUSTRATED CATALOGUE of Bedsteads, Bedding and Bed-room Furniture sent free by Post.—196, 197, 198, Tottenham-court-road, London.



REDUCED PRICES of

THE INTERNATIONAL EXHIBITION PRIZE MEDAL, AWARDED 1862.
ESTABLISHED 1744.
AUSTIN'S IMPERIAL PATENT SASH and BLIND LINES,
To BUILDERS, CARPENTERS, and BLIND MAKERS.
J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his
IMPERIAL PATENT FLAX SASH-LINES,
of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.
They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

JOHN EMERY,

JOHN & WILLIAM EASTWOOD,
Belvedere road, Lambeth, and Kent road Bridge

HYDRAULIC LIME and ROMAN CEMENT, manufactured by LLOYD JONES & CO. Halkin Works, Holywell, Flintshire. The Halkin Hydraulic Lime is the same as used in the construction of the Liverpool Docks, Manchester, and various waterworks, collieries, and mines throughout the country, being so long celebrated for its strong cementitious and consolidating powers for masonry in water. Can be supplied by rail or water to any part of the kingdom, either in bulk, in casks, or ground, and in barrels and bags. The Limestone can be had in full cargoes, also their Cement in barrels, which is of a very superior quality and warranted pure. Orders to be accompanied by a banker's reference. Apply at the Works; or to E. & W. AARON, Agents, 66, South John-street, Liverpool.

GEORGE ALLEN (late W. & T. N. GLADDISH),
LIME, CEMENT, SAND, LATHS, HAIR, BRICKS, TILES, SLATES CHIMNEY-POTS, STONEWARE DRAIN-PIPES, WELSH AND STOURBRIDGE FIRE GOODS, &c.
DANVER'S WHARF,
FOOT OF BATTERSEA BRIDGE, CHELSEA.

PURE HYDRAULIC LIME, Manufactured from the best HALKIN MOUNTAIN LIMESTONE, same as supplied for the construction of the Liverpool and Birkenhead Docks.
The HOLYWELL LIMESTONE COMPANY are prepared to deliver the above, in lump or ground, packed in bags, into waggons, at the Holywell Station of the Chester and Holyhead Railway, or on board vessels at Greenfield Wharf, Chester River.
Prices and particulars furnished on application to Mr. EVAN EVANS, Manager, Pary's Mine Works, Holywell, Flintshire.
The Company guarantee the quality of the lime to be equal to that used by the Engineer of the Liverpool and Birkenhead Docks.
Agents wanted. No applications attended to without a banker's reference.

GUTTA-PERCHA MILL-BANDS.—The Gutta-Percha Company beg to state that the increasing demand for the Gutta-Percha Strapping for Driving-bands, Lathestraps, &c. fully justifies the strong recommendations they have everywhere received. Their durability and strength, permanent contractibility and uniformity of substance; their non-susceptibility of injury from contact with oils, grease, acids, alkalies, or water; and the facility with which the only joint required can be made in bands of from 200 to 300 feet long, render them superior to leather for almost all working purposes, and decidedly more economical. Every variety of Gutta-Percha Articles, such as Tubing, Soles, Pump-buckets, Fire-buckets, Bosses, Union-joints, Flasks, Bottles, Bowls, Toilet-trays, Curtain-rings, Galvanic Batteries, Talbotype Trays, &c. &c. manufactured by the Gutta Percha Company, and sold by their Wholesale Dealers in town and country.
THE GUTTA-PERCHA COMPANY, PATENTEES, WHARF ROAD, CITY ROAD, LONDON.

DESACHY'S FIBROUS PLASTER.
GEORGE JACKSON & SONS,
HAVING BECOME THE PROPRIETORS OF THE PATENT RIGHTS IN
DESACHY'S FIBROUS PLASTER,
Beg to call the attention of Architects to its Capabilities.
It is adapted for the speedy and economical production of any coffered or circular work, waggon-headed ceilings (all bracketing being avoided, as it is fixed to the joists direct), fluted and plain columns, panelled dados, all kinds of diaper, &c.; for the linings of walls and ceilings, and for all purposes of ornamental plaster.
The advantages are great. It is of great lightness and of excellent quality; it is not inflammable, and is ready to be painted immediately after it is made; it has been used (under the direction of Owen Jones, esq.) for the ceiling of St. James's Hall; at Messrs. Oakey's, Oxford-street; Mr. Hancock's, New Bond-street; the Crystal Palace Bazaar; the Home for the Aged, South Lambeth; and at various other Works.
SPECIMENS CAN BE SEEN AT 49, RATHBONE PLACE.

Catalogues had at Mr. VIGERS's Offices, 3, Frederick's-place, Old Jewry; and of PULLEN, HORNE, & EVERSFIELD, 80, Fore-street, E.C. and 40, Parliament-street, S.W.

KING'S CROSS.—To Brick and Tile Makers, Builders, Plant Dealers, and Others.

PULLEN, HORNE, & EVERSFIELD have received instructions from Messrs. Randell & Evans to SELL by AUCTION, on the PREMISES, Maiden-lane, King's Cross, on WEDNESDAY, OCTOBER 19, at TWELVE, to clear the ground for building, a portion of the valuable PLANT and MACHINERY now fixed thereon, consisting of a pair of powerful cast-iron rollers, 3 feet diameter, and weighing 6¼ tons, with the stout timber framework and gear connected therewith; four wrought-iron pug-mills, an expensive clay elevator, 3 feet 6 inches wide and 120 feet in length, with guide-wheels, shafting, &c.; a smaller ditto, with buckets; a patent tile machine, a drain-pipe ditto, two brick presses, wash-mill, close-bodied waggon, cart-horse, &c.; also a large quantity of useful building materials, lasen down and assorted, consisting of about 2,000 pantiles, 100,000 feet of 1-inch and 4-inch boards, chiefly 14 inches wide; 25,000 red-headings, 50 squares of flooring, a quantity of glazed drain-pipes and junctions, and other effects.—May be viewed two days previous to the sale, and catalogues had of PULLEN, HORNE, & EVERSFIELD, 80, Fore-street, E.C. and 40, Parliament-street, S.W.

Valuable Freehold Building Land—Eight excellent Residences of the value of 600 guineas each, and stabling, in the rapidly-increasing town of Worthing, Sussex

MESSRS. PARSONS & SON have been favoured with instructions to SELL by AUCTION, in lots, at the STEINE HOTEL, Worthing, on WEDNESDAY, OCTOBER 19, 1864, at TWO for THREE o'clock, the following important PROPERTY:—Several highly desirable FREEHOLD BUILDING PLOTS, with frontages towards the sea and to Park-crescent, suitable for the erection of first-class abodes. EIGHT commodious RESIDENCES, being Nos. 8, 9, 10, 11, 12, and 13, and TWO VILLAS, in the Gothic style, situate in Park crescent, six of which are let to good tenants, and two in Ann Park crescent, one of the most attractive features of the west end of Worthing, is entered from the public road by a noble triple archway, closed with iron gates; its charming grounds have been laid out with ability, and the shrubberies have attained luxuriant growth. Buyers of the plots and residences will be also entitled to use of the grounds. Three of the residences are furnished and the furniture may be had at the option of the respective purchasers. To well-known NURSERY GROUND and BUILDINGS thereon (in the occupation of Mr. Bushby, until December 25th next), lying to the south of Park-crescent, having a frontage to the Esplanade of 429 feet, and a depth of 435 feet, affording ample space, and admirably adapted for the erection of several villas, a class superior in neighbourhood Worthing. Also, PLOTS of BUILDING LAND, lying between Park-crescent and the nursery ground, and STABLING and COACH HOUSES behind Park-crescent.—The property may be viewed, and particulars, with a plan of the estate and conditions of sale, had of Messrs. HUNT, CURREY, & HOPER, Solicitors, Lewes; Messrs. SENIOR & ATTREE, Solicitors, 2, New Inn, London; at the Steine Hotel, Worthing; Mr. W. L. BLAKER, Builder, Chapel-street, Worthing; and of the Auctioneers, 9, Marine-parade, Brighton.

Valuable Building Materials.

MR. C. F. SMYRK will SELL by AUCTION, on the PREMISES, Moat-house, Stockwell-green, on WEDNESDAY, OCTOBER 19 at TWELVE (or ONE), the remaining portion of the excellent MATERIALS, fittings, and fixtures, of the above mansion, taken down, carefully assorted, and put in to convenient lots, to suit the trade and purchasers; comprising 250 squares of slating, 1,500 feet lime-ashlar, 6-light sash-frames, 2-light ditto of prime small Lynch yellow batten flooring, long rafters, joists, girders, plate, and other scantlings, doors, sashes and frames, partitioning, dressed and lathes, stock of firewood, 25 fine old marble fittings of a chaste character, 40 pairs of antique wrought-iron entrance gates, chimney-pots, and an hundred variety of other sound materials, fittings, and fixtures.—On view till sale. Catalogues on the Premises, two days prior, and at the Auctioneer's Offices, 2c., Bucklersbury, City, E.C.

NOTICE OF SALE at CAMDEN TOWN: two days, MONDAY and TUESDAY, OCTOBER 17th and 18th, at ELEVEN for TWELVE; extensive STOCK of a BUILDER.

MESSRS. LEREW will SELL by AUCTION, on the PREMISES, Camden terrace, 2,000 planks, deals, and battens; 1,000 feet cube of die square, 200 squares flooring, 20,000 feet moulding, 7,000 feet wide pine, 10-inch feet quarterings, 1,500 feet pencil cedar, 2,000 feet mahogany, 5,500 feet wainscot boards, dry cut stuff, 4 benches, doors, scaffolding, ladders, a pulpit, pewing for 250 persons 160 lots useful old materials, slate cistern, chimney-pieces, &c.—Auction Offices, Carrington-street, Hampstead road.

LLOYL'S MARBLE WHARF, adjoining Vauxhall Bridge, Pimlico.—To Sculptors, Masons, and Others.—A SALE of MARBLE by AUCTION will take place at the above Wharf, by order of Messrs. Lloyl, on TUESDAY, NOVEMBER 1st, at ELEVEN for TWELVE, consisting of a large assortment of Marble, in Blocks and Slabs, viz. veined statuary, Sicilian, emperor's red, dove, blue and gold, Egyptian, and other marbles; also about 10,000 feet of slab, in nearly all the above varieties. Approved bills at four and six months. May be viewed two days previous, and catalogues had at the Place of Sale, 1, Grosvenor-road, adjoining Vauxhall Bridge.

SALE-ROOMS, 13, HIGH HOLBORN.—To Builders, Carpenters, and Others.

MR. HOLLINGSWORTH will SELL by AUCTION, at his ROOMS, on MONDAY next, 17th OCTOBER, at ELEVEN for TWELVE, a superior stock of PAPER-HANGINGS received from a City Warehouse (in consequence of the premises being taken down), in flocks, trade antique, gold and fancy borders, &c.; also an assortment of Builders' and General IRONMONGERY, consisting of cast-iron sash-weights, latches, bolts, locks, pads, screw gutters, cast white lead, varnishes, brass work gas fittings, forty marble chimney-pieces, stone trusses, and a variety of Building Materials.—May be viewed and catalogues had.—Auction Offices, 13, High Holborn.

To TIMBER DEALERS, NURSERYMEN, GENTLEMEN, and OTHERS.—CLAPTON PARK ESTATE, near St. John's Church, Hackney.

MR. J. TAYLOR is instructed to SELL by AUCTION, on the ESTATE, on THURSDAY, OCTOBER 20th, and following Day, at TWELVE o'clock, all the valuable TIMBER and SHRUBS growing on the Estate, together with about 5,000 feet of strong IRON PARK FENCING.—Catalogues may be obtained of Mr. CRICK, Fountain Inn, Clapton; of the Gardener on the Premises; and of the Auctioneer, No. 70, Fenchurch-street, City.

CLAPTON PARK ESTATE, Lower Clapton, Middlesex.—Eligible FREEHOLD BUILDING LAND, Land-tax and tithe free.

MR. J. TAYLOR is instructed to SELL by AUCTION, at GARRAWAY'S Coffee-house, Change-alley, Cornhill, on MONDAY, NOVEMBER 7th, at TWELVE (or ONE o'clock), the FREEHOLD BUILDING LAND, on Clapton-road, near to St. John's church, Hackney, suitable for the erection of Cottages. Nine tenths of the purchase-money may remain on mortgage or contract at 5 per cent. interest, to be paid in nine years by equal quarterly instalments; but the whole or any part of the balance may be paid off at any time without notice. Particulars and Conditions of Sale may be obtained 5 days before the Sale, of T. W. ROGERS, Esq. Solicitor, No. 70, Fenchurch-street; at the "Fountain Inn," Clapton; of Messrs. HAMMACK & LAMBERT, No. 59, Bishopsgate-street Within; at the Place of Sale; and of the Auctioneer, No. 70, Fenchurch street, City.

HORNSEY, near the Railway station and Church, and in close proximity to the Alexandra Park.—Very valuable and beautiful Building Estate, adapted for the erection of first-class villa residences, and presenting to Land Societies and others a profitable and extensive building scheme.

MESSRS. NORTON, HOGGART, & TRIST have received instructions to OFFER FOR SALE, at the GUILDHALL COFFEE-HOUSE, near Guildhall, in the city of London, on TUESDAY the 25th of OCTOBER next (unless previously sold by private contract), a most important and valuable FREEHOLD BUILDING ESTATE, of about 14 acres (the whole tithe free and land-tax redeemed), situate adjoining the property of F. Fletcher and H. Woodgate, and close to the rural village of Hornsey, at the foot of Muswell Hill, close to the church, only seven minutes' walk from the station on the Great Northern Railway, and within half an hour's ride of the metropolis. The property, which includes part of some nursery grounds, with parlour's cottage, stables, and sheds thereon, is approached by a 40 feet road from the high road to Muswell Hill and Alexandra Park; it has also a frontage of about 370 feet to the road to Crouch End and London, so that a road must be formed through the offering to afford access to the whole. It commands views of extraordinary beauty and extent, and presents an opportunity rarely to be met with for a highly profitable building speculation.—Particulars, with plans, may be had shortly at the Compasses Inn, near the property; of Mr. LAMBERT, Surveyor, 4, New Basinghall street; of Messrs CLAYTON, COOKSON, & WAINWRIGHT, Solicitors, 6, New-square, Lincoln's-inn; at the Guildhall Coffee-house; and of Messrs. NORTON, HOGGART, & TRIST, 62, Old Broad-street, Royal Exchange, E.C.

ALDERSHOTT AND FARNBOROUGH.—Valuable Freehold Property, comprising a well-accustomed Public House, and eligible Building Land.

MESSRS. EDWIN FOX & BOUSFIELD are instructed to SELL by AUCTION, at the QUEEN'S HOTEL, North Camp, Farnborough, on WEDNESDAY, OCTOBER 19th, at THREE in the afternoon, in Lots, the FREEHOLD of the CRIMEA TAVERN, and two acres of valuable Freehold Building Land, situate in the South Camp, Aldershott, close to the Permanent Barracks; two plots of Freehold Building Land, in the centre of the village of Cove, near to the Farnborough Railway Station, on which a well-accustomed beer-house stood, but which has been recently destroyed by fire.—May be viewed, and particulars had of Messrs. PRICKETT & KING, Solicitors, Basingstoke; at the Queen's Hotel, North Camp; at the Crimea Tavern, South Camp; at the Swan, Farnborough-road; and of Messrs. EDWIN FOX & BOUSFIELD, 41, Coleman street, Bank, London.

TWICKENHAM PARK, near RICHMOND.—Most Eligible BUILDING LAND TO BE LET on Lease, for Ninety-nine Years, in Large or Small Plots. Money advanced, if required. For particulars, apply to W. BACKHURST, at the Estate Offices, Twickenham Park; or EDWARD GUILLAUME, Esq. 14, George-street, Mansion House, London.

SURBITON.—TO BUILDERS and OTHERS.—LAND TO BE LET, on building leases, five minutes' walk from the station, and close to the River, for lots of not less than 30 a year rent. A part on of the money will be advanced if required.—Apply to Mr MUDIE, Victoria-road, Surbiton.

A FREEHOLD MANSION TO BE SOLD. The elegant Furniture may be had at a valuation. There are four reception rooms, two being 50 feet in length, eleven bed-rooms; stabling for eight horses and coach-house for four carriages; suitable servants' offices; extensive ornamental grounds, with greenhouses, in all 28 acres; gravelly soil; near Sunningdale Station, South Western Railway, half a mile from Windsor Great Park, and fifty minutes from Waterloo Station.—Apply to J. BOWEN MAY, Esq. Solicitor, 67, Russell-square.

RAMSGATE.—To BUILDERS, CAPITALISTS and OTHERS. TO BE SOLD or LET several valuable Plots of FREEHOLD LAND, situate on the East Cliff, and adjoining the site of the proposed new Hotel.—Apply to WALLER & SON, 4, Basinghall-street, Bellevue-road, London; or of Messrs. FRIEND & VINTEN, House-agents, Ramsgate.

FREEHOLD LAND TO BE SOLD, or LET on Building Leases in Glengall road, Old Kent-road and also near Bricklayers' Arms. Also, FREEHOLD WHARF, in the Surrey Canal, near Old Kent-road.—Apply to Mr. MAY, Acorn Lumber Wharf, Old Kent-road.

CITY OF LONDON.—An extensive PLOT of FREEHOLD BUILDING-GROUND, suitable for the erection of Warehouses or Manufactories, TO BE LET by Tender, on a Building Lease, for the term of 99 years. It is situate on the west side of Rood-lane (corner), Cripplegate (near to Wood-street), and contains a frontage of more than 73 feet and a depth of 107 feet, with an area of about 8,100 superficial feet.—Particulars, with a plan of the ground, may be obtained of Mr. EDMUND WOODTHORPE, Architect 28a, Basinghall-street: of Mr. A. J. BAYLIS, Solicitor, Churchcourt, Old Jewry; and at the Office of the Vestry Clerk, Cripplegate.

WATERSIDE PREMISES, City road.—Messrs BULLER & HORSEY are instructed to LET, on LEASE, from Michaelmas next, extensive WATERSIDE PREMISES, occupying a site of 21,000 superficial feet, situate on the Wenlock Basin, City-road, and comprising a spacious and substantial modern brick-built manufactory of two floors, engine and boiler houses with 30-horse power steam engine and three Cornish boilers, range of brick-built offices and powerful hydraulic gateway entrances. There is a water frontage of about 270 feet. For further particulars, apply to Messrs. FULLER & HORSEY, 13, Billiter-street, London, E.C.

EXHIBITION ROOMS.—TO BE LET, until the end of February, the GALLERY of the SOCIETY of BRITISH ARTISTS, consisting of five large rooms.—Inquire on the Premises, Suffolk-street, Pall-mall. THOS. ROBERTS, Secretary.

GOLDEN SQUARE, Regent-street.—TO BE LET on Lease, for twenty-one years from Midsummer, 1865, those very eligible and extensive PREMISES (now and for many years past in the occupation of Messrs. Broadwood & Sons, Pianoforte Makers), situate and having an extensive frontage to Bridle-lane, near to Golden-square. Plans of the property, and other particulars may be seen on application to the Vestry Clerk; and a Committee of the Estates of the Parish of Saint-in-the-Fields, London, will meet in the Vestry-room of the Church on FRIDAY, the 21st OCTOBER, 1864, at TWELVE o'clock at noon precisely, to receive TENDERS. The Committee do not bind themselves to accept the highest or any Tender.

STEP. JNO. JONES, Vestry Clerk.

1, Church-porch, Skinner-street, Snowhill.

GOLDEN SQUARE, Regent-street.—TO BE LET, on Lease, from Midsummer, 1865, together or separately, those very Eligible PREMISES, Nos. 2 and 3, Upper Johnstreet, Golden-square. A plan of the property, and other particulars, may be seen on application to the Vestry Clerk; and a Committee of the Parish of St. Saviour's, Southwark, will meet in the Vestry-room of the Church on FRIDAY, the 21st OCTOBER, 1864, at TWELVE o'clock, to receive TENDERS. The Committee do not bind themselves to accept the highest or any Tender.

STEP. JNO JONES, Vestry Clerk.

No. 1, Church-porch, Skinner-street, Snowhill.

FOREST HILL.—BUILDING LAND.—FOUR valuable PLOTS of LAND, each 30 feet frontage, and 150 feet deep, TO BE LET on Building Lease. Beautiful situation on high ground, and near the Catford Bridge Railway Station. For the erection of Two Pairs of Villas this offers unusual advantages. Money can be advanced. Plan and particulars of Mr CHARLES RUTLEY, Architect and Surveyor, No. 15, Poultry, E.C. or St. James's-road, Croydon.

TO BUILDERS, CABINET-MAKERS, &c.—WANTED to PURCHASE, or TAKE on LEASE, large light and dry WORKSHOPS, with a Dwelling house, Stabling, and Coach-house attached, in an open healthy neighbourhood, near to or between the New North-road and the "Angel" Islington.—State full particulars of locality, measurement, rent, &c. in first instance by letter only, to F. WILLEY, 15, South-street, New North-road.

BUILDING LAND near LONDON.—WANTED, on LEASE, suitable for the Erection of Six-roomed Houses.—Address particulars and terms to J. H. D. Evans's Library, 532, King's road, Chelsea, S.W.

MANUFACTURING PREMISES.—To Builders and Others requiring Space and Steam Power.—TO BE LET on LEASE, an old-established LAUNDRY, situate in Park-street, Camden Town, consisting of large ironing, drying, and sorting rooms (with or without the requisite steam plant of the laundry), stabling, carpenter's yard, and two large houses, with offices, all in good repair, and fit for occupation. For particulars apply at Mr HINGSTON'S Office, 1, Stanhope-terrace, Gloucester-gate, Regent's Park.

TO PLUMBERS.—TO BE LET, a PLUMBER'S SHOP, established over twenty years.—For cards of address, apply to Mr. BLACKBURN, Stationer, 11, Park-terrace, Regent's Park, N.W.

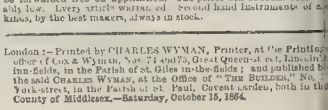
SOUTH NORWOOD.—FREEHOLD, and LAND-TAX REDEEMED.—Several very eligible BUILDING PLOTS, with frontages of 50 feet each to excellent roads by an average depth of 200 feet, suitable for the erection of detached or semi-detached villas, in a most healthy and picturesque locality, close to the Norwood Junction Station on the Brighton Line, at within an easy distance of the market town of Croydon, Crystal Palace, &c. The water and gas mains are already laid on to the estate.—Apply to Messrs. WINSTANLEY & HORWOOD, Auctioneers, Surveyors, and Land Agents, 10, Paternoster-row, St. Paul's, E.C.

PERRY HILL, Sydenham.—BUILDING LAND TO BE LET, by TENDER.—More than SIX ACRES of GEOUND, suitable for the erection of first-class villas. Good frontages to the high road. Land tax redeemed. Each lease to be for a term of eighty years. Tenders to be received on or before the 25th of OCTOBER, 1864, at LEATHERSELLERS' HALL, Saint Helen's-place, E.C.

TO BRICK and TILE MAKERS, and OTHERS.—TO BE LET, for a term, BRICK KILN, FOREMAN'S COTTAGE, and LAND, containing Brick Earth, situate at Sunningdill, Berks. The site is a great demand for its cheap transit on the formation of the railway to the Sunningdale and Ludgrove Town, and also to carry out building operations in the neighbourhood, therefore the owners of a large estate at Sunninghill are prepared to let a portion of Land, with Kiln and Foreman's Cottage, for Brick and Tile Making. The use of a private siding on the station at Sunningdale Railway, to near the ground, another advantage which is not enjoyed by any one taking the land.—For particulars, apply to Messrs. DRIVER & CO. Surveyors and Land Agents, 4, Whitehall, London, S.W.

TO BE SOLD, a small Plot of FREEHOLD GROUND, in the neighbourhood of Kilburn; also a large Portion To be Let, for Building Purposes.—Apply, 37, Alpha-road, Regent's Park, N.W.

ST. ALBAN'S.—FREEHOLD LAND TO BE SOLD, with 400 yards of both Sides of the New Railways, a most desirable corner plot, 212 feet by 132 feet.—Apply next month, between TWELVE and THREE, to Mr. J. WHEELER, Church-road, Watford.



TO BUILDERS.—OLD-ESTABLISHED BUSINESS TO BE SOLD, with immediate possession, the LEASE of EXTENSIVE PREMISES in the country, consisting of Two excellent light-roomed Houses, excellent offices, with fittings for cabinets, carpenters, painters', masons', and builders' shops, drying room, extensive lofts, and store-rooms. Also a powerful steam sawing machinery for wood and stone, with circular saws, reciprocating frame, saws, tools, &c. complete; good large yard, stabling for four horses, cart shed, pig-house and piggeries, and every requirement for carrying on an extensive business.—For further particulars apply immediately, by letter, to A. B. 11, Belgrave-street, South, Pimlico, London, S.W.

BUILDER'S BUSINESS WANTED, with a good connexion, and with suitable premises of moderate size.—Address, stating full particulars, to W. H. Office of "The Builder."—A Partnership in an established Business would be entertained.

TO BUILDERS.—A Genuine CONCERN in the country. Incoming, 400l. Half the money required.—Address, LEX, Office of "The Builder."

GOULD & PORTER (late CARY) are now manufacturing their improved French DUMPY LEVEL, best quality, complete for 9l. 10s. 0d.; with silver ring compasses, 20l. 10s. 0d.; 9-inch ditto, 11l. 0s. 0d. and 12l. 12s. 0d. Best 5-inch THEODOLITES, 22l. 10s. 0d. All other MATHEMATICAL INSTRUMENTS at Revised Prices.—Optical and Mathematical Instrument Makers to the Admiralty, Royal Geographical Society, Royal Military College, Sandhurst, &c. Established upwards of a century.—181, Strand, London.

MATHEMATICAL DRAWING INSTRUMENTS, THEODOLITES, LEVELS, CIRCUMFERENTIAL SCALES, TAPES, CHAINS, PANTOGRAPHS, RULES, &c.

JOHN ARCHBUTT & SONS,

BY Order of the Secretary of State for India in Council.—NOTICE is hereby given, that TWENTY-FIVE APPOINTMENTS in the Upper Class of the ELECTRIC TELEGRAPH DEPARTMENT in INDIA will, in the year 1865, be open to PUBLIC COMPETITION.

A COMPETITIVE EXAMINATION will, accordingly, be held in this Office in the month of MAY next. Full particulars of the conditions on which candidates will be admitted to the examination, and also respecting the nature of the appointments to be competed for, may be obtained at this Office, on application, either personally or by letter, addressed to the "Under Secretary of State for India," India Office, London, S.W.

India Office, 1st July, 1864.

SCIENCE and ART DEPARMENT of the COMMITTEE of COUNCIL on EDUCATION, SOUTH KENSINGTON.—A COURSE of TWELVE LECTURES on THE HUMAN FORM will be delivered by JOHN MARSHALL, Esq., F.R.S., Surgeon to University College Hospital, in the LECTURE THEATRE, during the session, 1864-5.

Lecture I. 11th November.—Introductory.

Lectures II. III. IV. 18th, 25th November, and 2nd December.—The Land or Angular Elements of the Human Form—The Skeleton.

Lecture V. 9th December.—The Joints.

Lectures VI. VII. VIII. IX. 16th, 23rd December, 6th and 13th January.—The Soft or Round Elements of the Human Form—The Muscles, Skin, and Interposed Structures.

Lecture X. 20th January.—The Demonstration of the Forms of the Trunk.

Lecture XI. 27th January.—The Demonstration of the Forms of the Limbs.

Lecture XII. 3rd February.—The Centre of Gravity and the General Mechanics of the Body.

This Course will be delivered on Friday Evenings, at Eight o'clock. Masters in training and Registered Students of the Department are admitted free. The public are admitted on payment of 5s. for the Course of Twelve Lectures, or 1s. each Lecture.

A Summer Course is given, to which Female Students are admissible. By order of the Committee of Council on Education.

THE ARCHITECTURAL MUSEUM, SOUTH KENSINGTON MUSEUM, W.

The following PRIZES to ART-WORKMEN are now offered:—

For Wood carving, 20l. and 10l.

For Silver Work, 10l. and 5l. 5s. (the latter given by Mr. H. Heather Bigg, of Wimpole-street).

For Transparent Enamels, 10l. (given by the Ecclesiological Society and Mr. Beresford Hope).

For Opaque Enamels, 10l. (given by Mr. Ruskin).

Smaller Prizes will be added at the discretion of the Council.

Full particulars may be had either by a letter to the Honorary Secretary, at 13, Stratford-place, London, W. inclosing a directed and stamped envelope, or of the Attendant at the entrance to the South Kensington Museum; or at the Office of "The Builder," York-street, Covent-garden.

A. J. B. BERESFORD HOPE, President.
GEO. GILBERT SCOTT, Treasurer.
JOSEPH CLARKE, Honorary Secretary.

ARCHITECTURAL ASSOCIATION.—The CONVERSAZIONE and OPENING MEETING of the SESSION 1864-5, will be held on FRIDAY Evening, OCTOBER 28, at the Rooms of the Association, 9, Conduit-street W. Gentlemen desirous of joining members are requested to apply to either of the Honorary Secretaries.

J. DOUGLAS MATHEWS, 10, Cloak-lane, City, E.C.} Hon.
LACY W. RIDGE, 3, Duke-street, Adelphi, W.C. } Secs.

SCOTTISH NATIONAL MEMORIAL to H.R.H. the PRINCE CONSORT. In answer to numerous communications which have been addressed to the Committee of Advice, intimation is hereby made that MODELS and DRAWINGS of DESIGNS for the SCOTTISH NATIONAL MEMORIAL may be furnished on any smaller scale than that of one inch to the foot, which an artist may prefer, in those cases where adherence to the scale prescribed would render the model or drawing excessive or inconvenient in size.

W. S. WALKER, Hon. Sec.

125, George-street, Edinburgh, 7th October, 1864.

BILLING'S PATENTS.—CHIMNEY TERMINALS.—THROAT VALVES.—NOTICE to ARCHITECTS.—The Proprietors of these PATENTS have given the Writer an Interest in the same, and have considerably reduced the prices of the Articles, trusting that by so doing these useful Inventions may be introduced more generally in all new buildings.—For prices, apply to the Manager, Mr TYLER, 13 Ahbigdon-street, Westminster, who will also afford any information, he having been for many years engaged with the late Mr. BILLING, in the practical curing of smoky Chimneys.

NOTICE.

BROWN & GREEN'S KITCHEN RANGE WAREHOUSE is now REMOVED to the NEW PREMISES, 73—74, Bishopsgate-street Within, a few doors from the same address, as No. 81. These afford accommodation for a still larger stock of their Patent Prize Medal Ranges and Stoves, Cooking Utensils, &c. to meet the great public demand; and also for the consequent more extensive execution of all descriptions of hot water, bath, laundry, and steam work.

73—74, Bishopsgate-street Within.

COMPETITIONS.

TO ARCHITECTS.—The Town Council of the City and Borough of Bath invite DESIGNS for the proposed NEW BUILDINGS upon the site of the late White Hart Hotel, Bath, which is intended, in conjunction with the Pump Rooms, Assembly Rooms, Libraries, &c., to form a complete suite of rooms for festivities, together with hot and cold fresh mineral water, and Turkish baths in connexion with the present existing establishment. The cost of the buildings not to exceed 15,000l. A premium of 300l. will be paid to the author of the design to which the Town Council shall award the first place, and a premium of 100l. to the author of the design which they shall consider second in merit, and in the event of either of those designs being carried out, the premium of the said first or second, as the case may be, will be deducted from the final commission. The designs are to be delivered, free of cost, at the Guildhall, Bath, properly endorsed, on or before NOVEMBER 28th, and the two designs to which premiums shall be awarded will become the absolute property of the Town Council, without any condition whatever. All designs to have the name of the author or authors attached, and are required in mezzotone; the plans and elevations to be drawn to a scale of 1-8th of an inch to a foot. A copy of the conditions to be observed by architects, with a plan of the site, and other particulars, may be obtained of the undersigned, on the payment of 10s. 6d. which will be returned to those forwarding designs.—By Order,

JOHN STONE, Town Clerk.

Guildhall, Bath, September 8, 1864.

TO ARCHITECTS.—The Committee of the proposed Congregational NEW CHAPEL, Albion-square, Pembroke Dock, South Wales, are prepared to receive PLANS and SPECIFICATIONS, for which, if approved of, they offer the sum of 50l. 10s. and 25l. 10s. by Mr. JOHN LEWIS, Llanelly, place on or before the 14th day of DECEMBER, 1864. For full particulars, apply at the above address. The Committee do not bind themselves to accept any of the Plans submitted to them.

PONTYPOOL NEW CHURCH.—To ARCHITECTS, &c.—The Committee appointed for carrying out the Building of a New Church, invite Architects to furnish DESIGNS for a CHURCH, to accommodate 500 persons, and the cost of which not to exceed 1,000l. Each set of designs to comprise plans of interior, exterior, sectional elevation, and perspective view, with the estimated cost of the structure when completed. The Committee will give the sum of 12l. for the best approved design, on certain conditions, which may be known, with any other information, by applying to Mr. DOVEY, Town Schools, Pontypool, to whom all Designs must be sent on or before 1st DECEMBER next. No payment will be made for the successful designs.

Pontypool, October 17, 1864.

CONTRACTS.

NORTH-EASTERN RAILWAY.—DARLINGTON SECTION.—To BUILDERS.—TENDERS are required for the ERECTION of a PASSENGER STATION, at the Eston Junction. Plans and specifications may be seen at the ARCHITECT'S OFFICE, Northgate, Darlington, from MONDAY, OCTOBER 17th, to SATURDAY, OCTOBER 29th, 1864. Tenders to be delivered at the Company's Offices, in Darlington, not later than SUNDAY, OCTOBER 30th, 1864, addressed to the Secretary, and endorsed "Tender for Works." No pledge is given that the lowest or any Tender will be accepted.—Signed,

THOMAS MACNAY, Secretary.

Darlington, October 19, 1864.

BLACKFRIARS BRIDGE.—TENDERS will be received for the OLD STONE of this Bridge, consisting of Portland, granite in blocks and in steps, Roach, Portland, and rough rubble. Also for the Iron balustrade columns, with moulded bases and carved caps.—Apply to Messrs. THORN & CO. Contractors, on the Bridge.

CONTRACTS.

WAR DEPARTMENT CONTRACTS.—NOTICE to BUILDERS.

TENDERS are required for the SUPPLY of MATERIALS and LABOUR for War Department WORKS, at Aldershott Camp and Permanent Barracks, in the County of Hants including Repairs to the existing buildings, under a Triennial Contract, from the 1st January, 1865, to the 31st March, 1868, determinable at any period after one year, on either party giving to the other three months' notice in writing.

Copies of the schedules, for which the sum of six shillings and nine pence for each copy must be paid on issue, together with forms of Tender, may be obtained on application at this Office.

Although the said schedules include prices for work done, and for day labour, the Contractor will, as a general rule, be called upon only to supply materials.

The Tenders to be addressed, under cover, to the Director of Contracts, War Office, Pall Mall, London, S.W. endorsed, in the left hand corner, "Tenders for Works at Aldershott," on or before SATURDAY, the 5th NOVEMBER, 1864.

The Secretary of State for War does not bind himself to accept the lowest or any of the Tenders

Royal Engineer Office, Aldershott,
19th September, 1864.

RUGBY WATER WORKS.—To ENGINEERS and CONTRACTORS.—The Local Board of Health, Rugby, are desirous of receiving TENDERS for the EXECUTION of the undermentioned WORKS, consisting of—

CONTRACT No. 1.—The Construction of an Engine house, a Reservoir, Filter, and Filtered Water Tank; also laying about 2,250 yards of 9 inch Cast-Iron Pipes, with bends, and sundry other pipes.

CONTRACT No. 2.—A Grasshopper Engine, capable of raising 200 gallons of water per minute to a height of 200 feet through the 7 inch pipes; a set of Three-throw Pumps; also a Patent Centrifugal Pump, with driving gear, suction pipes, and levers.

CONTRACT No. 3.—Supplying about 2,250 yards of 7 inch Cast-iron Socket-Pipes, with bends, and sundry other pipes.

The drawings and specifications may be seen at the Office of the Local Board of Health, Rugby, between the hours of TEN a.m. and FOUR p.m.; or at the Offices of Messrs. EASTON, AMOS, & SONS, Engineers, Grove, Southwark, London, on and after the 17th instant. Tenders may be given for any one or all of the Contracts; but in the latter case, the separate amount for each Contract is to be stated; and the price for the pipe-laying at per lineal yard. The Contractor will be required, at his own expense, to enter into a bond with two sufficient sureties, or to give other approved security for the due performance of his Contract. Sealed Tenders, indorsed "Tender for Water Works," and specifying the number of the Contract to which it refers, must be received by me, at the Office of the Local Board, in Rugby, on or before the 11th day of NOVEMBER next, after which time no Tender can be received. The Local Board do not bind themselves to accept the lowest or any Tender. By order,

THEODORE M. WRATISLAW, Clerk.

Rugby, 8th October, 1864.

RIPON WATERWORKS.—The Local Board are prepared to receive TENDERS from competent persons, for the SUPPLY of CAST IRON SOCKET PIPES, and Appendages, for the proposed new Waterworks for their district.—Copies of the specifications, with forms of Tender, and probable quantities required, may be obtained on application to Messrs. STEVENSON & GILEY, Engineers, Halifax; and Tenders (sealed, and marked on the outside "Waterworks: Tender for Pipes") must be sent in to me, at my Offices in Ripon, on or before TUESDAY, the 25th day of OCTOBER instant.

R. W. NICHOLSON, Town Clerk,
Ripon, 6th October, 1864. and Clerk to the Local Board

RIPON WATERWORKS.—The Local Board are prepared to receive TENDERS from competent persons for the supply of SLUICE COCKS and HYDRANTS for the proposed new Waterworks of their district. Further information and forms of Tender, with probable quantities required, may be obtained from Messrs. STEVENSON & GILEY, Engineers, Halifax; and Tenders sealed and marked on the outside "Waterworks: Tender for Sluice cocks, &c." must be sent in to me at my Offices in Ripon on or before FRIDAY, the 28th day of OCTOBER instant.

R. W. NICHOLSON, Town Clerk,
Ripon, 11th October, 1864. and Clerk to the Local Board.

CONSERVATIVE LAND SOCIETY.—The AVENUE ESTATE, Southampton.—TENDERS are invited for the execution of ROAD MAKING, PAVIOURS' WORKS, &c. on the Society's Estate, parish of St. Mary, Southampton. The materials for the road making can be dug on the Estate. The plan and specification will be seen on and after MONDAY, OCTOBER 24, at the Office of the Society's Surveyor, Mr. JAMES WYLSON, 33, Norfolk-street, Strand, London, W.C.; also at the Office of WILLIAM PURLAND, Esq., 52, Above Bar, Southampton. Tenders, sealed and endorsed "Tender for Works at Southampton," to be sent in to the Surveyor, on or before SATURDAY, NOVEMBER 5. The Committee do not bind themselves to accept the lowest, or any, Tender submitted.

No. 33, Norfolk-street, Strand, London, W.C. Oct. 20, 1864.

STOCKTON and MIDDLESBROUGH WATER-WORKS.—To CONTRACTORS for PIPE LAYING.—The Directors of the Stockton and Middlesbrough Water-Works Company are prepared to receive TENDERS for LAYING DOWN about Twenty Miles (length) of CAST IRON SOCKET PIPES of various diameters from 9 inches to 1 inches, and other Pipe Castings. Specifications may be seen, and printed forms of Tender may be had on application to me, or to Mr HAWKSLEY, C.E., 30, Great George-street, Westminster, S.W. on and after MONDAY, the 31st day of OCTOBER instant, at each of which places Tenders endorsed "Tender for Pipe-laying," must be delivered at the Office of the Company, Castlehill-lane, Darlington, on or before TUESDAY, the 1st day of NOVEMBER next. The Directors do not bind themselves to accept the lowest or any Tender.—By order,

THOMAS HALL, Secretary.

Secretary's Office, Central Buildings,
Darlington, 19th October, 1864.

[For remainder of Contracts see next Page.

TENDERS required for 200,000 sound STOCK BRICKS delivered on the Ground at Wood-green, for the foundations of a Mansion for T. Oakes, Esq.—Tenders to be sent to Mr. J. DALE, C.E. 1, New Inn, Strand. Terms Cash.

TENDERS required for ALTERATIONS and ADDITIONS to the BEAR HOTEL and FERRY, Newenham, Gloucestershire. Plans and specifications to be seen on the 31st instant, at the Office of Mr. JOHN DALES, C.E. to whom Tenders are to be sent.

TENDERS will be received from Builders for the ERECTION of STABLES and COACH-HOUSE at Hampton Wick. The plans and specifications can be inspected from the 24th to the 28th instant, between the hours of TEN a.m. and FIVE p.m. at the Offices of Mr. JOHN DALES, C.E. 1, New Inn, Strand, to whom Tenders are to be sent.

TENDERS will be received from Builders for the ERECTION of STABLES and COACH-HOUSE at Hampton Wick. The plans and specifications can be inspected from the 24th to the 28th instant, between the hours of TEN and FIVE, at the Offices of Mr. JOHN DALES, C.E. 1, New Inn, Strand. Architect and Engineer to the said Company to whom Tenders are to be sent, on or before the 31st instant. The lowest Tender not necessarily accepted.

TENDERS will be received from Builders for ALTERATIONS and ADDITIONS for the Dining Halls Company, at their Branch, Market street, Edgware road, Paddington. The plans and specifications can be inspected from the 24th to the 28th instant, between the hours of TEN and FIVE, at the Offices of Mr. JOHN DALES, 1, New Inn, Strand, Architect and Engineer to said Company, to whom Tenders are to be sent on or before the 28th instant. The lowest Tender will not necessarily be accepted.

TENDERS required for a quantity of OAK PARK FENCING, to be fixed upon the estate of the late Mr. Overend, at Wood-green.—Particulars to be had of Mr. J. DALES, C.E. 1, New Inn, Strand, to whom Tenders are to be sent, on or before the 27th instant.

TO BUILDERS.—BRIGHTON CLUB and NORFOLK HOTEL COMPANY, Limited.—The Directors of the Company are prepared to receive TENDERS for the Proposed ALTERATIONS and ADDITIONS to the Main Building of the Norfolk Hotel, Contract No 2. The plans and specification may be seen, and bills of quantities obtained, on payment of £1, (which will be returned to those who tender), at the Offices of the Architect, Mr HORATIO N. GOULTY, 12, Union-street, Ship-street, Brighton, after the 27th day of NOVEMBER. Tenders to be sent in to the "Secretary, Brighton Club and Norfolk Hotel," on proper forms, which will be supplied by TWELVE o'clock on SATURDAY, the 3rd day of DECEMBER, 1864. The Directors do not bind themselves to accept the lowest or any Tender.—By order,

TELFORD E. SHARP, Secretary.
Company's Offices, Norfolk Hotel, Brighton.

WAKEFIELD LOCAL BOARD of HEALTH.—To CONTRACTORS.—The Wakefield Local Board of Health are desirous of receiving TENDERS for the SEWERING, LEVELLING, PAVING, FLAGGING, and CURBING VICARAGE-STREET extending from the north side of Wrenthe to the south side of Jack's Well-road, within the district of the Board, according to the plans and specifications prepared by Mr. WILLIAM CRUTCHLEY, Borough Surveyor, and which may be examined at the Council-room, Town hall, Wakefield, between the hours of NINE o'clock in the morning and THREE o'clock in the Afternoon, on any day up to and including SATURDAY, the 29th instant. Tenders are to be sent in under cover to the Town Clerk, addressed to "The General Works Committee of the Wakefield Local Board of Health," and endorsed "Tender for Vicarage-street Works," on or before TWELVE o'clock at noon on SATURDAY, the 29th OCTOBER instant. Forms of Tender may be obtained at the Surveyor's Office, in which form alone Tenders will be received. The Committee do not bind themselves to accept the lowest or any Tender.—By order,

JAMES WHITHAM,
Town Clerk and Clerk to the Local Board of Health.
Town Clerk's Office, Wakefield, October 12th, 1864.

BIRSTAL WATERWORKS.—The Local Board for the District of Birstal, Yorkshire, are prepared to receive TENDERS from competent persons for the following ARTICLES and WORKS, in connexion with the water supply of their district, namely:—

CONTRACT No. 1.—The supply of Cast-iron Socket Pipes and Appendages.
CONTRACT No 2.—The supply of Sluice Cocks, Hydrants, and Street Boxes.
CONTRACT No. 3.—The excavation for, laying, jointing, and filling in after the pipes, sluice cocks, hydrants, and appendages
CONTRACT No. 4.—The construction of an Arched Service Reservoir.

The drawings may be seen, and printed forms of Tender, with quantities, may be obtained, on application to Messrs. STEVENSON & OTLEY, Engineers, Halifax; and Tenders (sealed and endorsed) must be delivered at my Offices, in Birstal, at or before NOON, on FRIDAY, the 28th day of OCTOBER instant.—By order,

JOHN SMITH, Solicitor, Clerk to the Local Board.
Birstal, near Leeds, October 13, 1864.

TO BUILDERS.—ST. PANCRAS, Middlesex.—The Directors of the Poor of the said parish will meet in the Vestry Hall, King's Road, Pancras road, on TUESDAY, the 1st day of NOVEMBER next, at TWO o'clock in the afternoon, to receive TENDERS from persons willing to CONTRACT for the CONSTRUCTION of an OAKUM-PICKING SHED, pursuant to plan and specification, to be seen daily between the hours of TEN and FOUR o'clock, at the Office of Mr. WILLIAM BOOTH SCOTT, C.E. Chief Surveyor, No. 10, Edward-street, Hampstead-road, N.W. And the Directors of the Poor hereby give notice that they will not be responsible for quantities taken out or supplied by any person, nor will they bind themselves to accept any Tender; and no travelling or other expenses will be allowed in any occasion.—Sealed Tenders addressed to me, and endorsed "Tender for Oakum Shed," to be delivered at the Vestry Offices, King's-road, Pancras-road, N.W. before TWO o'clock in the afternoon of the 1st NOVEMBER next; and the persons Tendering, or their agents, must be in attendance at the aforesaid meeting, at THREE o'clock p.m. on that day.—By order,

FRANCIS PLAW, Clerk.
Vestry Offices, Pancras-road, N.W. 18th October, 1864.

TO BUILDERS.—Persons desirous of TENDERING for the ERECTION of New BANKING PREMISES, for Messrs. Sparrow & Co. at Rochford, Essex, can inspect the plans and specifications, at my Offices, Chelmsford, after the 1st of NOVEMBER.—Tenders to be delivered to Messrs. SPARROW & CO. Chelmsford by or before TWELVE o'clock on the morning of the 7th of NOVEMBER.

SAMPLES of BRICKS, TILES, &c. Made at EAST COWES PARK, Can be seen in the Constructional Department, KENSINGTON MUSEUM. R LANGLEY, Agent

TO BRICKMAKERS.—All Parties who BURN BRICKS in CLAMPS are invited to inspect the NEW MODE of SETTING, patented by Mr. ROBERT WHITE, and which may be seen in operation at the Brickfields of

J. B. WHITE & BROTHERS, Erith, Kent.

The advantages of this plan are two-fold.
1st. Nearly all the bricks can be burnt into stocks, and the yield of inferior bricks is reduced from 35 to about 10 per cent of the total make, which in itself represents a large permanent saving.
2nd. The bricks are so much improved in colour and soundness as to give them a considerable additional value in the market over common stocks.
Licenses for use of the Patent granted to Brickmakers, on application to the Patentees 17, Millbank-street, Westminster.

NOTICE to BUILDERS.—Owing to a dissolution of Partnership, the whole of the magnificent and extensive STOCK of MARBLE CHIMNEY-PIECES, SLOVES, and RANGES, of Messrs. COLLINS & GREEN, at the Rotunda Works, 3, Blackfriars Bridge, 3, and 38, New Bridge-street, Blackfriars, will be SOLD OFF at a considerable reduction. The quality and extent of this Stock is well known; and Builders and Gentlemen requiring first-class goods will find a considerable advantage over ordinary prices.
Rotunda Marble Works, October 12th, 1864.

VICTORIA MARBLE WORKS.

MANUFACTORY at WALTON STREET.

LITTLE CASTERTON FREESTONE
Apply, for prices, &c. to
OCTAVIUS N. SIMPSON, STAMFORD,
The Owner; and see Specimen at the Museum of Practical Geology
Jermyn-street, W.
This stone (which is a perfect oolite) is raised in blocks of any portable size, and is about 6 feet thick in the bed. It will stand ANY WEATHER, is much used for water-works, and for the building and restoration of churches. When used as ashlar work it is not necessary to place it bed-wise. It works freely with a tooth-saw, and is wrought at a cheaper rate than any stone in the kingdom.
*** The above WEATHER STONE is used largely by London Builders.

W. & J. FREEMAN, Merchants in the various descriptions of STONE, GRANITE, and SLATE for Engineering and Building Purposes. Supplies direct from the Quarries, by vessel or railway. Direct communication with the principal ports for EXPORTATION. Wharf prices and estimates for special contracts, including quarry work or other labour, forwarded on application.—Office, 97, Millbank-street London, S.W.

PORTLAND STONE
Portland Slab, Paving, Landings, and Scantling of every size, always kept in stock; also York Paving and Landings. Steam, Stone, and Marble Saw Mills, Grosvenor Wharf, Chelsea, and Grosvenor-road, Pimlico.

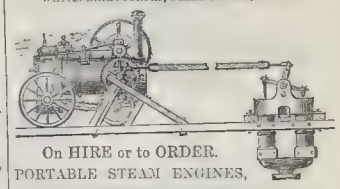
SMOKY CHIMNEYS,

S. DEACON



Respectfully invites the attention of Architects Builders, &c. to his
PATENT LOUVRE CHIMNEY CAP,
which has been in use some time with perfect success, most effectually curing chimneys where other caps have been of no avail.

The advantages attending this Cap are—It can be thoroughly cleaned by the machine when the chimney is swept, the brush being able to pass through the Cap without the liability of misplacing it; an increased up current, and the impossibility of a down one.

Prospectus, with testimonials, forwarded on receipt of Postage stamp, by

THE FURNISHING OF BED-ROOMS.

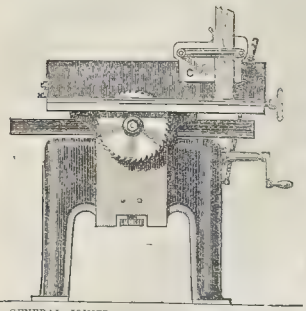
HEAL & SON have observed for some time that it would be advantageous to their Customers to see a number of specimens of Bed-room Furniture thus brought conveniently displayed, and that in order properly to display the style and effect of the different descriptions of Furniture, it is necessary that each description should be placed in separate rooms. They have therefore erected large and elaborate Show-rooms, by which they are enabled not only to exhibit their Show of Iron, Brass, and Wood Bedsteads, and Bed-room Furniture, beyond what they believe has ever been attempted, but also to provide several small rooms for the purpose of keeping complete suites of Bed-room Furniture in the different styles.

Japanned Dead Goods may be seen in complete suites of five or six different patterns, some of them highly ornamental, and others of a plainer description. Suites of Stained Deal Cottage Furniture, Polished Deal, Oak, and Walnut, are placed apart in separate rooms, so that customers are able to see the effect as it would appear in their own rooms. A suite of very superior Gothic Oak Furniture will not long be kept in stock, and from time to time new and select Furniture in various woods will be added.

Bed Furnitures are fitted to the Bedsteads in large numbers, so that a complete assortment may be seen, and the effect of any particular pattern ascertained as it would appear on the Bedstead.

A very large Stock of Bedding (HEAL & SON'S original trade) is placed on the BEDSTEADS.

The Stock of Mahogany Goods for the better Bed-rooms, and Japanned Goods for plain and Servants' use, is very greatly increased. The entire Stock is arranged in eight rooms, six on one floor (each 120 feet long), and two large ground-floors, the whole forming as complete an assortment of Bed-room Furniture as they think can possibly be desired.

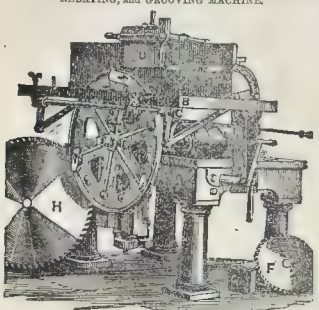


Every attention is paid to the manufacture of the Cabinet work, and they have just erected large Workshops on the premises for this purpose, that the manufacture may be under their own immediate care.

Their Bedding trade receives their constant and personal attention, every article being made on the premises.

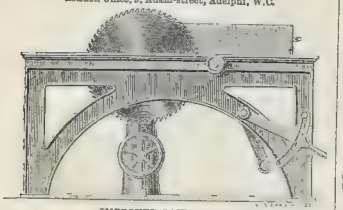
They particularly call attention to their Patent Spring Mattress, the Somnier Elastique Portatif. It is portable, durable, and elastic, and lower in price than the old spring Mattress.

HEAL & SON'S ILLUSTRATED CATALOGUE of Bedsteads, Bedding and Bed-room Furniture sent free by Post.—196, 197, 198, Tottenham court-road, London.



THE GENERAL JOINER,
by S. WORSSAM & CO.

The GENERAL JOINER is adapted for Sawing, Planing and Thicknessing, Mortising, Tenoning, Cross-cutting and Squaring up, Grooving, Tonguing, Moulding, Chamfering, Beading, Boring, and a great variety of other purposes.



The General Joiner having lately been greatly improved, and several new appliances added to it, S. W. & Co. have published, a new Illustrated Circular of this most useful "labour-saving" machine, which can be had free on application at their Works, 304, King's-road, Chelsea, S.W.

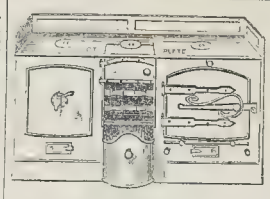
HENDERSON'S PATENT DERRICK CRANE.—Prize Medals for Practical Utility and Moderate Cost.

HENDERSON'S PATENT DERRICK CRANE, so extensively used in the building of the Exhibition, London, can always be had from the Makers, from 10-cwt. upwards, Portable, Foundry, Forge, Wharf, Quarry, Warehouse, and other descriptions of Cranes; also Steam Winches and Cranes (on the Derrick principle). Water Companies and others can also be supplied with our Improved Sluice Valves—for further particulars apply to BOWSER & CAMERON, Makers, Springfield Iron Works, M'Neil-street, Glasgow.

SIMPLICITY, UTILITY, ECONOMY, AND DURABILITY.
THOMAS PUGH & CO.'S NEW PATENT ECONOMIC SELF-ADJUSTING MORTISE AND RIM LOCK FURNITURE.
J. B. SCAMMELL & CO. (late Thomas Pugh & Co.)
WHOLESALE IRONMONGERS,
13, KING STREET, SNOW HILL, LONDON.

NUT PLATE.

We invite particular attention to the PATENT LOCK FURNITURE, which we do not hesitate to say is the most perfect article now manufactured, great Improvements having been recently made in it. It has been extensively used in Public and Private Buildings, in Her Majesty's Palaces, and Canal at Aldershott alone, many hundred sets without one single failure. It is applicable to all Locks and Latches, both Rim and Mortise, and effects a most secure fastening, without any screw in the neck of the knob. Perfect action guaranteed in both Locks and Furniture, if the Locks are of our own manufacture.



New rich Designs in Glass, China, Brass, Bronzed, Gilt, Carved Woods, Inlaid, &c. &c. or to any Design.

THIS FURNITURE MAY BE HAD WITH PLATES OR NUTS.

A most complete and extensive stock of every description of Locks, Latches, Brass Foundry, and Ironmongery, required for Buildings, of the best quality manufactured, at the lowest wholesale prices.

. Illustrations and Particulars sent on application.

WAREHOUSES FOR NAILS, PIPES, GUTTERS, &c. IN ST. JOHN'S COURT.

THE LEAMINGTON PRIZE KITCHENER.

These Ranges are strongly recommended for Economy, Cleanliness, and a Cure for Smoky Chimneys.

The Top forms an entire and efficient Hot Plate, and having an Open Fire, removes all the objections of a Close Fire-range.

A large STOCK of SELF-ACTING and other RANGES, REGISTER STOVES, and every description of BUILDERS' IRONMONGERY, at Wholesale Prices.

All Goods delivered free within Five Miles.

BURT & POTTS,
WHOLESALE AND MANUFACTURING IRONMONGERS.

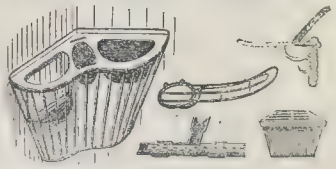
THE INTERNATIONAL EXHIBITION PRIZE MEDAL, AWARDED 1862.
ESTABLISHED 1744.
AUSTIN'S IMPERIAL PATENT SASH and BLIND LINES.
To BUILDERS, CARPENTERS, and BLIND MAKERS.
J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his
IMPERIAL PATENT FLAX SASH-LINES,
of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.
They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

THE PRIZE MEDALS
LONDON, 1851. PARIS, 1855. LONDON, 1862.
Awarded to
COTTAM & COMPANY,
2, WINSLEY STREET, LONDON, W.
For Progressive and General Improvements in
STABLE FITTINGS AND HARNESS BRACKETS.
AWARDED A PRIZE AT THE PARIS EXHIBITION.
PATRONIZED BY THE ENGLISH AND FRENCH GOVERNMENTS AS WELL AS BY THE PRINCIPAL NOBILITY, GENTRY, AND HUNTING ESTABLISHMENTS IN THE KINGDOM
IN USE AT HER MAJESTY'S STABLES, ALDERSHOTT AND BALMORAL



COTTAM & COMPANY, Winsley-street, W. are the original Inventors of the PATENT ENAMELLED MANGER, Water-trough, and Wrought-iron Rack, united in one simple, safe, and formation one complete and useful Fixture. The COTTAM'S Patent Noiseless Hay-rack and Corner-rack can be used with or taken to the back of the Manger, and work with ease and freedom up or down the guide bar.

COTTAM'S NEW PATENT SEED BOX, an important addition to the above fittings, is ingeniously constructed, light, and durable, prevents cleanliness, and is easily removed for inspection.

COTTAM'S PATENT PERMANENT ANCHORED DROP COVER for the above is a most essential addition to their fittings; it is never in the way; can be placed and replaced in an instant; while its cheapness, simplicity, and utility in keeping the contents of the troughs clean, and regulating the quantity to be taken, is quite sufficient to insure its use.

COTTAM'S PATENT SADDLE AND HARNESS BRACKET COMBINED

can be used with great advantage where space is an object, as it can be turned up out of the way when not in use.

COTTAM'S IMPROVED WROUGHT-IRON VENTILATING BRACKET preserves the shape, and allows the free admission of air to the under parts of the saddle.

COTTAM'S IMPROVED SURFACE GUTTER, with perforated moveable cover, the use of which prevents accidents, and can be easily cleaned out.

COTTAM'S CAST-IRON SANITARY TRAP, from its improved construction, gives a full water-passage, and does not allow any smell to ascend from the drain.

PATENT LOOSE BOX FITTINGS, and every article for the harness-room and stable, kept in stock, plain, galvanized, and enamelled. Iron Gates, Fencing, Hurdles, &c.

Illustrated Catalogues and Estimates gratis, upon application to
COTTAM & CO. 2, WINSLEY STREET, OXFORD STREET, LONDON, W.
WHERE FULL-SIZED STALLS, LOOSE BOXES, AND HARNESS-ROOM, &c. ARE FITTED UP, SHOWING ALL COTTAM'S PATENT IMPROVEMENTS, &c.

WROUGHT IRON WINE BINS.

FARROW & JACKSON
Beg to call the attention of Architects and Builders to their Wrought Iron Wine Bins, which are ADAPTED (as shown) either for BRICK ARCHED VAULTS or CELLARS with FLAT CEILINGS, the mode of fixing in either case being so simple, that they may be put up by any ordinary workman. They combine great strength with lightness and economy of space, and their DURABILITY has been satisfactorily PROVED DURING nearly FORTY YEARS.
The Shelves are formed of Plates of Iron laid on Bars, which rest on the Cross-bars of the Lattice Uprights, and are removable at pleasure.
Plans and Estimates furnished, and Cellars fitted complete in any part of the Kingdom.
*** As these Bins were the invention of the late Mr. FARROW, and great attention has been given to them by the present Firm, long practical experience enables FARROW & JACKSON to offer the best advice as to arrangement.

ALSO THEIR
NEW REGISTERED IRON BINS,
Made any size or shape, to fit any spare corner, with SEPARATE REST FOR EACH BOTTLE,
Peculiarly adapted for Private Cellars.
No laths are required, and all trouble of Binning is avoided. The Cellular Bins may also be had fitted with light lattice doors, affording perfect security to the contents of the Bin.
FARROW & JACKSON,

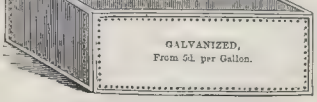
ST. PANCRAS IRON WORK COMPANY,
OLD SAINT PANCRAS ROAD, AND YORK ROAD, KING'S CROSS



IRON CASTINGS.
FLINTOFF, TREGELLES, & COMPANY,
Middlesex.
Estimates given for Building, Railway, and Machinery Castings of any size, and immediate delivery. London Agents, H. J. WALDUCK & CO. 11, Old Jewry-chambers, London, E.C.

WROUGHT-IRON TANKS, CISTERNS, GIRDERS, TUNNELS &c. plain or galvanized; CATTLE TROUGHS, IRON CART BODIES, &c.

BURNEY & COMPANY, Mill-wall, London.
Steam-boats from London Bridge call near the Factory.

JOHN BELLAMY,
BYNG STREET, MILLWALL, E.
WROUGHT IRON TANKS AND CISTERNS,
FOR WATER, OIL, AND TURPENTINE.
CATTLE TROUGHS, GIRDERS, CART BODIES, &c.

Omnibuses from Limehouse Station, Blackwall Railway.

GARDNER'S SUNLIGHT
GAS BURNER and FITTING ESTIMATES
Offer important advantages in Architects, Builders, and the Public generally.—GARDNER'S, No. 453, Strand, Charing cross, four doors from Trafalgar-square, London.
ESTABLISHED 1752.

CAUTION to ARCHITECTS and BUILDERS.—In consequence of complaints arising from the substitution of INFERIOR and SPURIOUS ARTICLES instead of
SMITH'S PATENT DOUBLE ACTION DOOR SPRINGS;
SMITH'S PATENT WEATHER-TIGHT WATER BAR; and
SMITH'S PATENT WEATHER-TIGHT CASEMENT FASTENING for FRENCH WINDOWS;
The above are most respectfully requested to observe that all GENUINE ARTICLES are stamped with the NAME and ADDRESS, SMITH, Patentee, 69, Princes-street, Leicester-square, London; and SUCH ONLY are WARRANTED.

R. FOX, 5, Conant-place, West-India-road, E. Contractor for laying Dovans's thick Vieille Montagne Roofing Zinc for the new system introduced by Mr. Pennethorne, Architect to the Vieille Montagne Zinc Mining Company, 8 Crown-court, Old Broad-street, E.C.) by whom extensively and every manner of work are obtained; Soak and Skylight Maker. All kinds of Ornamental and other Zinc Work executed in the best manner.

SAVING IN GAS.
D. HULETT, INVENTOR and PATENTEE. The Mercurial Gas Regulator is the only efficient instrument for insuring wholesome and uniform lighting, equalizing the pressure, and preventing any irregularity in the height of the flame.
D. HULETT & CO. 55, High Holborn, London.
Manufacturers of Gas Chandeliers, Glass Lustres, &c. &c.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER, at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails (wrought and cut), Copper and Zinc; Patent Locks of all descriptions, China, Glass, and Wood Furniture, of all kinds, with Patent Sliding Spindles; Dr. Arnott's Ventilators &c; and the New Registered Venetian Ventilator, so much admired, 6s. 6d. each.
J. H. BOOBBYER (late STURCH & BOOBBYER), established nearly 200 years, for the supply of GOODS of the BEST MANUFACTURE, at the LOWEST PRICE.
14, Stanhope-street, Newcastle-street, Strand, London, W.C.

LEAD GLAZING for CHURCHES and other BUILDINGS, Plain Quarries, Geometrical Patterns, or Fret Work. Builders and the Trade are supplied with every description of Lead Lights and Window Lead, on the shortest notice and lowest terms, by F. ODELL, Plain and Ornamental Lead Glazier to the Trade, 3, Bath street, City-road, E.C. Estimates and Lead for Churches &c. Estimates forwarded on receipt of particulars.

PATENT and BRITISH PLATE GLASS.
JAMES HETLEY & CO. beg to inform Architects, Builders, and the Trade generally, that their new Trade Circular for the above will be sent on application: they will also, on receipt of particulars, furnish estimates for any description of Glass now manufactured.—Patent Plate, Sheet, Crown, and Ornamental Window Glass Warehouse, 35, Soho-square, London

STAINED GLASS for WINDOW DECORATION, GLASS MOSAIC and PAINTED OPAQUE GLASS for WALL DECORATION
J. T. LYON & CO.
13, BERNERS STREET, OXFORD-STREET, W.
Price lists, drawings, and estimates sent on application. Specimens of Stained Glass at the Kensington Museum and of Glass Mosaic at the Conduit-street Exhibition.

STAINED GLASS WINDOWS for CHURCHES and DWELLINGS — HEATON BUTLER, & BAYNE'S NEW CATALOGUE, containing Descriptions, Illustrations, including compartment Windows of the Last Supper, Christ Crucified, Decorative and Memorial Lights, Nave Windows, &c. &c. sent free.
HEATON, BUTLER, & BAYNE, New Bond-street, Covent Garden, W.C.

STAINED GLASS, MOSAIC, WATER GLASS, and other CHURCH MURAL DECORATIONS.
MR. PREEDY,
13, York place, Baker-street, Portman-square, London, W.

PAINTED GLASS WINDOWS and MURAL DECORATION.
LAVERS & BARRAUD,
ENDELL STREET, BLOOMSBURY, LONDON, and
48, JOHN DALTON STREET, MANCHESTER.

GLASS.—W. H. JACKSON supplies BRITISH PLATE, PATENT PLATE, ROLLED PLATE, CROWN, SHEET, HORTICULTURAL, ORNAMENTAL, COLOURED, PHOTOGRAPHIC, and every description of Glass, of the best manufacture, at the lowest prices.
Lists of prices and estimates forwarded, on application at the Warehouse, 315, Oxford street, W.

CRYSTAL WHITE SHEET GLASS.—
WHOLESALE BRITISH and FOREIGN WINDOW GLASS WAREHOUSE
British and Patent Plate, Crown, Sheet, Horticultural, Stained, Coloured, Ornamental, Ground, Fluted, Rough Plate, Photographic, and every description of Glass.
Estimates and Price-lists forwarded free on receipt of business card addressed to
R. METTAM & CO.
30 and 31, PRINCES STREET, SOHO, LONDON, W.

SOHO PLATE and GENERAL GLASS WAREHOUSE, 26, Soho-square, W. and George-yard, Crown-street, Soho, W.C.
ALFRED GOSLETT begs to inform Architects, Builders, and the Trade generally, that every description of Glass required for building purposes can be procured WHOLESALE, either in STOCK SIZES or CUT TO ORDER, at his extensive warehouses as above.
SPECIAL ESTIMATES for the supply of LARGE QUANTITIES of Glass upon the receipt of particulars.

STAINED GLASS and WALL PAINTING.
MESSRS. CLAYTON & BELL,
311, REGENT STREET, W.
Adjoining the Polytechnic Institution.

PURE SILVER LOOKING-GLASSES manufactured by NEW PROCESS. Unequalled in brilliancy. Not liable to injury from damp, heat, or handling. EMBOSSED, ORNAMENTAL and BENT GLASS, SILVERED, at MODERATE RATES.
PATENT SILVERING COMPANY (LIMITED),
7, LOWER KENNINGTON LANE, S.

PAINTED DECORATION and STAINED GLASS.
CHARLES BLACKMORE,
373, EUSTON-ROAD, LONDON, N.W.
Designs and Estimates submitted.

NO SHUTTER BARS.

JENNINGS'S SHOP-SHUTTER SHOE.
SHOP SHUTTERS are SHOD on SCIENTIFIC principles for the above, at HALF THE COST OF THE USUALLY AND DESTRUCTIVE SHUTTER BAR. Shops refitted throughout with the above at London.
When ordering the above, state FINISHED THICKNESS of Shutters, and the way it is to go.
Sold by all Ironmongers, and retail by the Inventor,
GEORGE JENNINGS,
Engineering Depôt, Lion Wharf, Stangate, Lambeth, S.

GILT BORDERINGS for ROOMS, from 1d. per foot. Best and Cheapest House in London for every description of Room Bordering, Picture Frame Moulding, and Picture Frames of every description, at the very lowest cash Prices in all its branches to the trade. 4-inch Gilt Bead, 7s. per 12 feet lengths; best ditto, 12s.
GEORGE REES, 57, DRURY LANE.
Four doors from Drury-lane Theatre. Established in 1800.

BATH STONE OF BEST QUALITY.

RANDELL & SAUNDERS, Quarrymen and Stone Merchants, Bath.

List of Prices at the Quarries and Depôts, also Cost for Transit to any part of the United Kingdom, furnished on application to BATH STONE OFFICE, CORSHAM, WILTS.

BATH STONE OF THE BEST QUALITY.

PICTOR & SONS, Quarry Proprietors and Stone Merchants, Bath.

Lists of Prices at the Quarries and Depôts, also Cost of Transit to all parts of the Kingdom, forwarded on application to BATH FREESTONE WORKS, BOX, NEAR CHIPPENHAM, WILTS.

ARCHITECTS, BUILDERS, MERCHANTS, SHIPPERS, AND MASONS

Will find that the CHEAPEST HOUSE in LONDON for the following Goods is at the

EMPORIUM, J. W. BIRD & CO.'s, 143½ and 145, EUSTON ROAD, N.W.

BOX STONE CHIMNEY PIECES
for 5s. 6d.
Truss ditto ditto, 11s. 9d.

MONUMENTS AND TABLETS
in great variety, equally low in price.

MASONS' WORK OF ALL KINDS CONTRACTED FOR,
AND EXECUTED WITH DESPATCH IN TOWN OR COUNTRY.

A STOCK OF
500 CHIMNEY PIECES
always to choose from.

PRICE LIST ON APPLICATION.

MARBLE BOX CHIMNEY PIECE
for £1 5s.
First-class Bed-room ditto, £1 10s.

FIRST-CLASS
TRUSS MARBLE CHIMNEY PIECES
from £2 5s. to £3 5s.

A WELL-CARVED
STATUARY CHIMNEY PIECE
with 13½-inch Piers,
suitable for a Drawing-room, which must be seen to be believed,
FOR THE SUM OF £6.
Net Prompt Cash.
PRICE LIST ON APPLICATION.

STATUARY AND OTHER MARBLE CHIMNEYPIECES.

ARCHITECTS, BUILDERS, and MASONS will find at

W. WILLETT'S SHOW-ROOMS, MARYLEBONE ROAD, N.W.

OPPOSITE THE YORKSHIRE STINGO,

A LARGE ASSORTMENT of STATUARY & COLOURED MARBLES, also ENAMELLED SLATE, and STONE CHIMNEYPIECES, at Prices to command their Orders.

CARVED TRUSS STATUARY MARBLE CHIMNEYPIECE, FROM £6. AND UPWARDS.

ESTIMATES WILL MEET WITH PROMPT ATTENTION.

VIEILLE MONTAGNE ZINC.

THE ITALIAN-FORMED ZINC is much approved of by Architects and Engineers on account of its strength, durability, and appearance. On account of the light framing required, roofs, including framework and fixing, can be covered with it FOR £3 PER SQUARE up to 25 feet span. Sheds of larger span, including posts, 4*l.* per square. Architects are cautioned against allowing anything thinner than No. 13 gauge (20 oz.) to be used. ALL PLATES SHOULD BE REJECTED NOT BEARING, in addition to the Company's name, the words "ROOFING ZINC," and the gauge.

OLD ZINC RETAKEN AT HALF THE MARKET PRICE OF NEW.

For Designs and Estimates for Roofs, with Timber or Iron Framework, IRON CHURCHES COVERED WITH ZINC, and Buildings for the Colonies, apply to

THE COMPANY'S SURVEYOR,
12, MANCHESTER BUILDINGS, WESTMINSTER, S.W.

JAMES W. TYLER, CONTRACTOR FOR
DEVAUX'S VIEILLE MONTAGNE THICK ZINC ROOFING,

ON IMPROVED PRINCIPLES.

12, ABINGDON STREET, and 4, WOOD STREET, WESTMINSTER, close to Victoria Tower.

Estimates furnished for every description of Zinc Roofing and Guttering, inclusive or exclusive of Timber or Iron Framing, in all parts of England.

Having for several years been actively employed in laying DEVAUX'S THICK ROOFING ZINC (the purest extant) upon the new principles introduced by Mr. Edmeston, Mr. TYLER can refer with confidence to work done as his best recommendation.

Good Zinc badly laid will still be a failure, for there is much more importance in the mode of laying than is yet generally known; and parties who will intrust their work to Mr. TYLER will find that this important point is thoroughly attended to, and at no extra cost.

This Zinc thus laid is quite as lasting as lead, if the woodwork is arranged according to Mr. TYLER'S directions.

THE LAND SECURITIES COMPANY
(Limited).
Capital, 2,000,000*l.*

DIRECTORS.

The Right Hon the Lord Naas, M.P. President.

The Directors of the International Financial Society (Limited), acting as a Finance Committee.

John Ennis, esq. M.P.
Sir James Ferguson, Bart. M.P.
Col. Fulke Southwell Greville, M.P.
Sir John Charles Dalrymple Hay, Bart. M.P.
Sir Lawrence Palk, Bart. M.P.
Sir Henry Stracey, Bart. M.P.
William Barnes, esq.
Henry Farquhar, esq.
Sir John Gray.
Chandos Wren Hoskyns, esq.
John Horatio Lloyd esq.
Hon. William Napier.
Hon. Henry Petre.
Sir Charles Rich, Bart.
Granville Richard Ryder, esq.
Philip Twells, esq.

OFFICES.—Chief Office, West End, 32, Charing-cross, S.W.; Branch Office, Office of International Financial Society, No. 60, Threadneedle street, E.C.

The Company will make advances, repayable with interest, at fixed terms, or by instalments, or by terminable annuities, upon the security:—

1st. Of landed estates, first-class house-property, and real property of all descriptions and tenures, and of all estates and interests therein.

2nd. Of rates, dues, assessments, and impositions of all descriptions, raised or imposed by or under the authority of any Act of Parliament, public or private, Royal Charter, Commissions of Sewers, Drainage, or other sufficient legal authority on the owners or occupiers of land.

3rd. Of charges and securities of all descriptions upon or affecting landed estates, and all real property and tenures, made, given, or issued, under the authority of any Act of Parliament, public or private.

For further information, and forms of application, apply to the Hon. WILLIAM NAPIER, Managing Director, the Land Securities Company (Limited), 32, Charing-cross, London, S.W.

TO BUILDERS AND OTHERS.

THE GENERAL FINANCE, MORTGAGE, AND DISCOUNT COMPANY (Limited).

Offices: 3, PENTONVILLE-ROAD, LONDON.
PETER GRAHAM, Esq. Oxford street, Chairman.

Solicitors,
Messrs. BOULTON & SONS, Northampton-square.

This Company is prepared promptly to negotiate all kinds of Financial Business, including Loans on good Personal Security, Advances for terms of years on Mortgage of Freehold and Leasehold Property, repayable by instalments; the Discount of good Bills; Advances on Shares, Deposit of Deeds &c

The Directors are also prepared to receive Deposits at call or on short notice, for which 5 per cent. will be allowed until further announcement.

E. BALCH, Secretary.

THE PAPER STAINING COMPANY

(Limited) are now prepared to EXECUTE all ORDERS for the Home and Export Trade in Machine and Hand made PAPER-HANGINGS with promptitude, and at prices suited to all buyers. Orders to be sent to the Factory, 61, Gosnell road, London, E.C.

By order of the Directors.

IMPERIAL FIRE INSURANCE COMPANY.

KAMPTULICON FLOOR CLOTH,

for CHURCHES, PUBLIC BUILDINGS, BILLIARD ROOMS, and PRIVATE HOUSES.

GOUGH & BOYCE,
76, CANNON-STREET WEST, E.C.

The Builder.

VOL. XXII.—No. 1133.

The Architecture of Lombard Street.

OUR more recent articles on the general architecture of London, and the buildings of the City,* appear to have drawn the particular attention of many of our readers to the subject of the greatly increasing amount of art-work, as well as building-expenditure, in the City, or in a certain quarter of it, and to the contrast between, on the one hand, the result of art-effort in that small portion of the metropolis, and, on the other, the common and unsuccessful result elsewhere in London and in the suburbs. Without saying that the articles were needed to show to professional architects that the success in art which secures the appreciation of the public, is now small in proportion to the extent of the exhibition of details and members of decorative building, we are satisfied that the inquiry into the reasons of the contrast referred to, and of that between London and some other capitals, deserves to be pursued, in order that the reasons may be so thoroughly grasped as to be capable of being rendered clear to those who build. The public who are the employers of architects (when architects are employed), and the representatives of public opinion, the newspapers, are very ready to say that architecture is worked out,—that we are, and can be, only imitators. It is time that the reply went forth to these imputations; and the answer is afforded through a comparison of the conditions under which the buildings in the City, and those in the other quarters of London, are produced. Art, any more than poetry, can never be worked out.

In our previous articles we pointed to circumstances, and particularly the smoke-nuisance, as unfavourable to architecture throughout the metropolis, and to the public appreciation of the real art. But, it was at the same time seen that conditions of the production of architecture in the City, or in the buildings there of a particular class, and in the rest of the metropolis, differed. In London generally, the majority of the buildings are of narrow frontage; they belong to the class of domestic architecture, in which at once there are present the chief difficulties, and are absent, some of the resources, of architectural design; and, usually, they are erected on ground which is leasehold, and not by the person who will live in them,—so that individuality becomes subordinate to fashion, and any venture in the path of art is deemed a risk,—whilst if an architect be employed, style is dictated to him, and very often takes the place of art. In the buildings which are in the vicinity of the Royal Exchange, the frontages usually are at the least half as wide again as those of shops or private houses in London; the structures are of the public building, rather than the domestic architecture and retail-commercial class; the piers and openings can without difficulty be made symmetrical, and the former of sufficient width; the buildings are erected on freehold ground, and which has been purchased at great cost; and an architect is employed, and he is generally not dictated to by mere whim or caprice. The architect only is expected to produce a work the uses of which may not be mistaken, and a work in the same general style as that of the street-architecture; and both these obligations under which he is placed, are favourable to the object,—the appreciation of the work by the public,—as they are to the production of the art. There is a building on the north side of Leicester-square, devoted to the purposes of a bank (which on its first erection we thought deserving of illustration in our journal), that is an example of contrast to the system of architecture in the City. The Leicester-square building happens to be Gothic; and *Punch* was quite fair in speaking of it, lately, as having led him into a mistake; for, no one having seen the building, and being asked to guess its appropriation, without having observed the name, would think of it as a bank. There may be in architecture, a bank-like version of the Gothic style, as there are the domestic and the ecclesiastical versions; and due respect must be paid to the argument that Gothic is suited to churches, as also to the reasoning that what is used for one class of buildings should be made applicable to all. Still, the fact is, such a building as that which we have named, would express its purpose not anywhere in London; and, without thinking that architecture has the power, which some would ascribe to its forms devoid of sculpture, of distinctly speaking the purpose of each kind of structure, we are compelled to say that it is one condition of success that habitual associations should not be treated as non-existent. We have referred to the architects of the City buildings, as comparatively speaking unfettered; but in some cases, there has been an expression of opinion on the part of directors, and particular mention made of columns as desired features of a bank. The idea, thus conveyed, would accord with the character of the bank that was erected some few years ago, for Messrs. Jones Lloyd & Co., in Lothbury; wherein the ground story is the most prominent, and the prominence is effected by an order of three-quarter Roman Doric columns. One or more of the joint-stock banks in London have adopted a somewhat similar character to that of the City bank we have just now named, so that each of their branches may be known almost at once, as of the family. The Union Bank of London, the building in Fleet-street, opposite the end of Chancery-lane, may be quoted as an example of the character, which is also seen in the branches of the London and County Bank. We do not say that precise repetition is commendable; or that the original model was of the very highest character of art. But a particular character associated with the use of columns, and the "accentuation" of, or emphasis given to, the lower story, may be rightly held appropriate to a bank, and as that which was meant in the expression of opinion alluded to. It need not be considered as necessarily requiring the use of an order, and certainly not as justifying copyism of order or anything else; but the meaning conveyed we believe to be right, both in art and commercially; and therefore the object of the architect should be to give form to that idea, adding such other elements of effect, with inventions of detail, as he may be inspired with. The order may, in fact, be suggestive to him, without being actually used. In most of Professor Cockerell's banks, which are very successful in the demonstration of, at least, character which is accordant with the idea of a bank, columns are prominent: though, the height of the ground-story, containing the principal hall or room of the bank, in proportion to the story above it, and the large dimensions of the windows, are also to be taken into consideration. The value of ground in the City of London, and the capability of letting upper stories for offices,—or the requirement of a manager's residence,—dictate a different sort of building in the metropolis, to that which may be suitable in Manchester or Liverpool.

As connected with this value, alluded to in our former articles, the reader interested in any question of the architectural movement in the City, should not overlook a paragraph which we gave in our last number but one, headed "Value of Property in Lombard-street." It there appeared that certain property, purchased seven or eight months since for 20,000*l.*, had become worth 40,000*l.*, within the year; and that the first floor alone was let for 1,000*l.* a year. Private firms and companies able to begin with expenditure of the kind thus exemplified, are not likely to think much of the slight additional cost of decoration, the building being on their own ground. In short, having been under-valued or disregarded, decoration is now tending to excess: and carved ornamentation for the exteriors, is being adopted to an extent which might reasonably be considered unsuited to conditions of our atmosphere. Far better would it be, according to such view of the question, to adopt a less ornate character, or one with simple and bold features; and there is much in that view that merits attention, or if the smoke-nuisance be considered a permanent institution. Certainly, owing to its continuance, the waste of good or costly decoration is enormous.

Lombard-street is just now the focus of that building activity and architectural movement to which we have referred. The three buildings alluded to in a former [illegible] indeed, shrouded as they are by scaffolding, are not yet quite sufficiently advanced for detailed description; and the work, of whatever kind, occupying nearly the whole eastern side of Clement's-lane, is only in the stage of commencement. But we may state that the three buildings spoken of, comprise one for the bank of Messrs. Barclay, Bevan, Tritton, & Co., one for that of Messrs. Alexander, and one for the offices of the Royal Fire and Life Insurance Company.

The first-mentioned building, on the north side of Lombard-street, eastward of the Church of St. Edmund the King and Martyr, we illustrated in our last. It is a work of considerable dimensions on plan; whilst it has four stories, reaching altogether to upwards of 60 ft. of height. The chief importance is given to the ground-story, wherein three-quarter columns are used; the general character of style being Italian. There are a sufficient number of well-designed features of detail in the work; but, unfortunately, the common disadvantages of site in the City are operative in the case here. Lombard-street is not only a very narrow street, but it is not straight, or even in a regular curve. Thus the building now under notice, not only will be from its height, difficult of appreciation; but it has obtuse angles in plan of the front; whilst in elevation, the front is not symmetrical. The want of symmetry, however, may be less apparent in a narrow street than elsewhere. We gave some idea of the design, by an engraving; but it must be remembered that lofty buildings in narrow streets, are beyond the scope of perspective representation. This fact, which we

* Pp. 678, 713, *ante*.

have occasionally had to state, should afford a lesson even in design. A perspective view of such a building as that we are noticing, to be at all satisfactory, has to be taken from a supposed point, or on the supposition of a width of street four or five times that of the actual street. Such a view, however, shows the building as it is never seen, and as in the case of Lombard-street, never will be. Architecture cannot be rightly designed except for the circumstances or conditions under which the building will be seen,—that is to say, in this case, never, as the ordinary, and the only satisfactory, perspective view would represent it, seen at a glance or with the eye fixed. The treatment of the ground-story of the building as principal in the design, and of the upper stories as plain, and without great projections of balconies and cornices, thus seems to be suggested as right. An elevation merely, is of course defective, as substitute for a view, if only inasmuch as it does not represent projections. Mr. P. C. Hardwick is the architect of the bank of Messrs. Barclay, Bevan, & Co., which is likely to cost 30,000*l.* to 40,000*l.*

The bank of Messrs. Alexander is on the opposite side of the street. It has a second frontage in Clement's-lane, the form of the site being that of the letter L; the ground filling in to the internal angle of the site, and also filling the angle formed by the eastern side of Clement's-lane and Lombard-street, being occupied by the offices of the Royal Fire and Life Insurance Company, a small building erected not many years since, and illustrated in our journal. Messrs. Alexander's building is expected to cost about 11,000*l.* The work is not sufficiently advanced to say more about it, than that polished granite will be used for some of the shafts or other features. Mr. Waterhouse, of Manchester, is the architect. To provide the portion of the site in Clement's-lane, a building was removed which was erected in 1829.

The premises of the Royal Insurance Company seem to be intended to remain; but the Company have just erected a much larger building, for their offices, at the other corner of Clement's-lane and Lombard-street. A roughly-executed view is given with the Company's Almanack for the present year; and the comparison of it with the building, would serve at once to explain and enforce the argument we are advancing. The view shows the whole of each side, as though both Clement's-lane and Lombard-street were wide streets; whereas it is barely possible to see the entire front to the former street, from any single point; and it is quite impossible [illegible] at a glance, or as it is shown in the view. The architecture includes a considerable number of members, and an unusual amount of carved enrichment. Of both, there is much that is useless for any effect, if there be not what is even detrimental. We might urge that to place ornament where it can have no result, is inconsistent with one of the first principles of architectural design, economy, and must therefore induce the reverse of satisfaction. True art may be exuberant, and even prodigal of enrichment; but it will never throw ornament away, whether by omitting the relief of plain surface, and the contrast of the beauty of proportion with that of ornamentation, or by placing the ornament where it contributes nothing, or cannot be seen at all. The building now under notice, is of four stories, above a basement of which the windows appear, and besides a story in the roof lighted by oval lucarnes. The four regular stories are divided by entablatures, or cornice-mouldings, each of which carries a regular podium, in some cases broken by balusters to principal windows. All the windows are arch-headed, and have highly enriched architraves. The effect of grouping is given to the nine central windows, or three in each story, of the Lombard-street front, and to the fifteen of the other front, by Corinthian pilasters and other projections on the piers, some of which are finished by trusses carrying breaks in the cornice, or a balcony; and each window of the second story, has small pilasters carrying the archivolts, and enriched spandrels. The angles of the fronts are treated with rusticated quoins in the lower story, and pilasters of varied character in the stories above; and each front is crowned by a rich frieze, and modillion-cornice, and a balustrade. The corner of the building, where the entrance is, is canted off, and terminated by a richly decorated dormer-window. The doorway, which is arch-headed, and has an enriched archivolt, is flanked by panelled piers, which bear bold consoles in the form of animals, and a segmental pediment, upon which are placed coats of arms and supporters. The spandrels, or tympanum of the pediment, will receive some rich carving, in marble, by Thorneycroft. The Clement's-lane front measures about 52 ft., and the Lombard-street front about 45 ft., or in each case exclusive of the cant; and the cost will be about 17,000*l.* to 18,000*l.* Mr. John Belcher is the architect, as he was of the smaller building.

The building of the London and County Bank, of which we gave an elevation in 1862, when it was recently completed, is one of the most effective works in the street, though having a narrow frontage. Still, if our impressions respecting what is suited to a narrow street in this climate, be correct, the effect would have been more satisfactory with less projection of the cornices and other decorative members of the upper stories. The trusses, and the ornamentation on certain architraves, would have been better had they been composed with a greater proportion of scroll and moulded work, and not as they are, almost exclusively of floral, foliated, and other ornamentation of that character. The prominence of the window-pediments and cornice could not appear in the elevation which we gave; and the fact of the omission will help to show the difficulty, or impossibility, which there must be for us of representing any four-storied building in such a street as Lombard-street. The decorative effect of the basement of this front is excellent,—whilst the windows are large, and the breadth of pier is narrow; and the bank-like character is quite recognizable. The main feature is an order, Roman Doric,—the columns being three-quarter, four in number, and rusticated on the shafts. The two windows, and the fan-light over the plain doorway, of which the openings are quadrant-shaped at the top corners, are simply chamfered with narrow mouldings, and enriched with a console in which there is the form of a dolphin. The quoins of the building are well-studied and effective. The building has another front in Nicholas-lane; the plan being similar to that of a building already mentioned; only the arrangement is reversed. The Nicholas-lane front has merit of its own. Though plain, it has an excellent effect. The Doric basement is continued, the consoles of the windows, however, being plain, as are also the mutules of the cornice. The general walling of the upper stories is formed of Jennings's patent facing bricks. Each course appears to be about twice that of a course of ordinary bricks: the colour is that of Portland stone nearly, and seems to stand well. Boldly projecting eaves, and a plain cornice; chimneys upon the front, and grouping with it, and dormers, are the other features. The effect, devoid of ornament, is just enough for the narrow street; ornament is not thrown away; neither are we pained in looking at the front: an agreeable impression only is taken away with us. Had there been ornamental work, the projections would have been excessive; they would both have concealed and been out of character with such work. This building cost, as stated in 1862, something less than 21,000*l.* Mr. C. O. Parnell was the architect.

Perhaps the best work in Lombard-street, however, is the bank of Messrs. Robarts, Lubbock, & Co. It has a basement of which the character is suited to the idea of a bank, but which makes no use of columns: this basement is the most decorated feature of the design; therefore the work is specially suited to the conditions of a narrow street; and good effect is gained with economy in ornament. One peculiarity of the building, which will not satisfy all, is the use of brick for the upper stories. We are not sure, however, that an objection to the material, in this case white brick, would be founded on sufficient reason. The really serious objection to white brick, is its discolouration. There are churches in London, built some five-and-twenty or thirty years ago, of Suffolk brick, where the blackness is as repulsive as that of stone, whilst the small size of the pieces of material seems itself to detract from nobility. However, as the building in Lombard-street now is, there is little in the brickwork that interferes with the effect of the basement, and of the decorative features of the upper stories, the window-dressings. The general proportions of the front are well marked; there is a simple, but bold and effective base-mould,—a feature often sacrificed in the City to considerations of the value of ground; and the ornamentation is well placed, and not in excess. The projection of the base-mould is about 6½ in., beyond the outer face of the masonry; but as this last is rusticated with deep channelling, the actual projection may be considered greater; and it is in effect, from the mouldings being seen in profile; for, there is a side front to the building, in Abchurch-lane. The happy effect, of base to the building, is still farther aided by the disposition of the door-steps, and more especially by the introduction of a blocking course with mouldings, continued as a sill to the windows; so that the whole arrangement is that of a substantial podium and footing. There are three stories, and seven bays in the width of the Lombard-street front. The five middle bays in the lower story are windows, which have square heads with radiating lines of rustication, and finely carved consoles, with lions' heads, which carry the simple cornice. The piers between the windows are rusticated in horizontal lines, deeply channelled. The end-bays have doorways. The door-cases have segmental-headed pediments, trusses with lions' heads and festoons, and each a frieze enriched with a carved head, scrolls, and sprays. Of the seven windows in each of the upper stories, three of those of the second story of the building, are made most prominent. To the second story also there is a dentil cornice; whilst to the top story there is a simple block cornice, of slight projection as compared with what is to be found in many buildings of the present day. Altogether we regard this building as one of the most successful works of the class in London, and none the less to be esteemed, because its effect is derived from good proportion and grouping, and from thoroughly well-considered and well-executed work. Mr. P. C. Hardwick was the architect. The front in Abchurch-lane has the general character of that in Lombard-street, the doorways omitted.

Through these works recent or progressing, Lombard-street is fast changing its character. There are works enough remaining, however, of last century, and the commencement of this, to illustrate some passages in the history of architecture. Entering the street from the west, we have relics of the Georgian period of little art, but not devoid of features showing that the desire for decoration is innate and not to be wholly lost, relics of forms and of modes of treatment not to be found elsewhere, so near to what is best of the work of the present day. In-doors, in some of the banks, you will see that they still burn oil, or candles; whilst in the more recent buildings, the "sun-burner" (chiefly under the hands of Messrs. Strode & Co. as manufacturers) has displaced the old arrangement of gas-ligl ting, so unfavourable to decorative arrangements and to health. Small panes and plate-glass are seen in the windows of buildings adjoining one another. Here we may see one of Sir Robert Taylor's best works, the Pelican Fire Office, with its elegant Doric and rusticated basement, carrying the group sculptured by Lady Di. Beauclerck, the whole now coated with paint. Here you have records of the passage which our art has made through the revived Greek and the whimsies of Soane, and through the later period when the Florentine rustication was discovered, down to this time when a curious contrast is afforded, as it is even in Lombard-street, between the architecture which merely uses decorative members and ornaments, and that which uses them as in productions that we have examined, or in the main rightly and in good taste. And let not the north front of Hawksmoor's church be passed unnoticed. There are lessons of effect in it.

THE NORTH LONDON WORKING CLASSES' EXHIBITION.

The Exhibition in the Agricultural Hall at Islington was opened on Monday last by Earl Russell, in presence of a very large number of friends and well-wishers.

In the course of his address, the Earl having inspected the collection, said,—"That which I have seen does the working classes of North London the very highest credit. There are works of skill, and ingenuity, and judgment, in carving, cabinet-making, and various other branches of professional art which you will see from day to day, and which cannot fail to give the highest satisfaction. I must confess that it gives me pride and pleasure to feel that I am the fellow-countryman of the men who have so employed their time,—who have exhibited the greatest ingenuity in the works they have performed,—and have in that manner done credit to the country to which they belong."

Some excellent singing formed part of the proceedings, and the whole passed off very satis-

factorily. It should be known that the present enterprise, representing the united industry of Clerkenwell, Holborn, St. Luke's, Hoxton, Holloway, Islington, St. Pancras, and Camden-town, sprang out of a meeting of some half-dozen persons, all properly belonging to the working classes, at the Lamb and Flag Ragged Schools, Clerkenwell-green, where, at the invitation of Mr. W. J. Watts, they discussed the advisability of holding an exhibition in the parish of Clerkenwell. Subsequently one district and then another sought permission to join in the scheme, until at length the undertaking expanded to its present proportions.

The committee, have endeavoured to group together, as much as possible, objects of a similar character, and placed those that are likely to attract especial attention in such positions that they may be easily inspected by a large number of persons at the same time.

The total number of exhibitors to whom space has been granted is 867, representing almost every branch of industry, from the profession of sculptor and artist to the more humble calling of the costermonger. By far the larger portion of the exhibition consists of amateur contributions, some of them very curious and interesting. An artisan seldom chooses as a recreation that branch of industry of which his daily occupation consists. If actively or laboriously employed during the day, drawing, painting, or model-making is generally practised to occupy his leisure hours; while he who follows a sedentary occupation almost invariably resorts to some more active method of utilising his spare time.

The classification adopted is as follows:—Class 1. Professional workmanship; class 2. Amateur productions; class 3. Inventions and novel contrivances; class 4. Mechanical models; class 5. Architectural, marine, and ornamental models; class 6. Artistic objects; class 7. Ladies' work of all kinds; class 8. Miscellaneous—being articles not included in the foregoing.

By the above arrangement the work of the amateur is not placed in juxtaposition with the production of the skilled workmen, which might have caused unfair comparison to be unavoidably made.

Prizes, not pecuniary, will be awarded by seven adjudicators, who have kindly agreed to act in that capacity.

It would mislead to speak in too glowing terms of the great majority of the contributions; but viewed as they should be, with reference to the circumstances under which they were produced, there are few that will not interest. In a first walk round the building we saw several good specimens of cabinet work, some very good wood carving (portions of it seen before elsewhere), and some excellent models,—one of Camberwell Green Congregational Church, when it is seen to be by "a domestic servant," Susan Gregory, deserving especial notice. Nor can we avoid reference to the elaborate models sent by S. Aldred, compositor, particularising, because of its more harmonious colouring, a representation of Anne Hathaway's Cottage, at Shottery. Numerous drawings and paintings from men and women of all classes line the walls, and there are several noticeable specimens of sculpture by amateurs. A bust of Lady Macbeth by J. Long, hair-dresser, is much better than the statue of the same personage sent by him to the Art-Union of London competition. Some acted farces by a letter-carrier; commentaries on works in Hebrew, by a compositor in his leisure hours; and several capital specimens of penmanship, will, doubtless, attract notice. A collection of works of art, selected from the Museum at South Kensington, has been lent by the Science and Art Department of the Committee of Council on Education, supplemented by loans from her Majesty the Queen, and forms a valuable feature.

Let us sing with Mr. W. H. Bellamy, who wrote a special ode for the occasion:—

"All honour to the working man,
Who worketh 'with a will,'
With energy, and industry,
With cunning, and with skill:
Seen or unseen of any man,
Be it with head or hand,
Who knows his work is fair and true,
And knows that it will stand.

All honour to the working man,
Who worketh 'with his might,'
In patience, and in honesty,
At what he knows is right;
Whose life, though pass'd in poverty,
Will bear the light of day,
Nor fears his works should follow him,
Die when or where he may."

THE STRAND MUSIC HALL.

The Strand Music Hall, long in progress, was opened to invited guests on the evening of the 15th, and to the public on the Monday following. The main building, as it at present exists, and which constitutes the hall proper, covers what was the site of old Exeter Change, and adjacent buildings running east and west from opposite the Lyceum Theatre, in Wellington-street, Strand, to Catherine-street, where it has a present frontage of 70 ft., from which to Wellington-street the depth is 110 ft. The company to whom it belongs have acquired the land that will ultimately extend the main building to Exeter-street, in the north, where it will possess a frontage of about 60 ft.

The hall is approached from the Strand by a building 96 ft. long, with a frontage of 36 ft. to the Strand, and which contains besides corridors and staircase saloon, forming communications from the Strand with all parts of the building, dining and smoking rooms, with waiters' serving rooms, and lavatory and dressing-rooms for visitors to each; and immediately communicating with the hall proper on the ground, balcony, and box floors, refreshment bars or buffets, which will be used as luncheon-bars and for the service of the dining-rooms during the day, and as buffets for the use of the hall in the evening.

The inclination of the ground from the Strand to Exeter-street has rendered it necessary for the general ground-level to be approached at the Strand entrance by a flight of about sixteen steps, 11 ft. wide. The area, or promenade, when complete, will contain, it is stated, about 6,000 square feet. A separate stone staircase is provided to the boxes in Catherine-street, arranged to serve as exit from the balcony. An exit is provided from the area at the northern extremity of the Catherine-street frontage, in addition to which, when the building is completed to Exeter-street, another staircase will communicate from Exeter-street with both the box and the balcony floors, and another entrance to the area at the corner of Catherine-street.

The artificial lighting of the hall is effected wholly through the ceiling, a mode now not unknown in London or in Paris. But the particular manner in which this is effected is claimed as original. The space between the ceiling and roof forms a lighting chamber, where all the gas arrangements are contained, which, together with those of every portion of the building, are controlled and regulated in the valve-room. Quoting the architect's own account,—

"The roof of the building is entirely wrought iron and zinc, constructed with lattice principals transversely from east to west. From the plates forming the tie-beam, the ribs of the ceiling are suspended. These ribs are fitted with moulded zinc sash-frames to receive the sheets of coloured glass laid loose on broad rebates, and bedded on india-rubber, thus facilitating the removal of the glass for cleaning, overcoming the difficulty of expansion and contraction, and obviating by the india-rubber beds the liability to breakage or vibration to which this arrangement would otherwise subject it. The ribs dividing the ceiling are hollow, and fitted with notched plates to receive prisms, 15 in. in length and about 3 in. in width. Alternately with these prisms, of which there will be over a thousand, occur strips of plate-glass, ground on one side, and having stars cut upon them. The lantern pendants at the intersections are also formed of prisms of various forms in pure crystal, the light in small jets of gas, being brought down into them below the level of the line of prisms, which are lighted by floats of gas in small jets close together, along the upper edge of the hollow ribs, and on a level with the coloured glass in panels: these are lighted by star-lights, over each of which is a flat cone reflector communicating with ventilating shaft of galvanized iron. The hollow ribs, and the lights round the side-panels, are also covered with semicircular reflectors, and communicate, as in the case of the cone reflectors, with the ventilating shafts. The direct effects of combustion are thus immediately conducted to the outer air through rotary cowls above the roof, while the general ventilation of this large light-chamber is effected by numerous swing louvres."

Messrs. J. Defries & Son, who have executed all the gas arrangements throughout the building, claim the merit of the system, whatever its peculiarity may be, and assert that they have a patent for it. According to their published statement,—

"There are several thousands of burners. The lighting-chamber contains upwards of 350 ventilating tubes, the whole of which are conducted into enormous shafts, in which a proper vacuum has been established, thus causing an unvarying upward current, so that heat as well as the vitiated air is constantly conveyed out of the building."

The architect, however, has issued a counter-statement, denying that there is any patent, and asserting emphatically that, though great credit is due to those gentlemen for the manner in which the gas arrangements throughout the building have been carried out, and he is largely indebted to them for valuable hints, and for general assistance, whatever originality and invention the mode of lighting may possess, are entirely his own.

We shall be glad to hear the nightly cost at which the lighting is effected. We are forced to say that when we saw the hall on Saturday night it had a somewhat gloomy aspect, in consequence, as it seemed, of the large amount of coloured medium through which the light passed.

The columns throughout are of cast iron, with wrought copper foliated capitals. The brackets supporting the top cornice, and the fronts to balcony and boxes, are of cast iron. The ceilings under boxes and balcony, and the whole of the stage and proscenium, are of pitch pine, flat varnished. The panels of the proscenium are to be filled in with paintings; and it is further decorated with a series of twelve ugly allegorical figures, each 4 ft. high. The character of the internal decorations may be described as spiky.

The ventilation of the hall was entrusted to Mr. Wilson W. Phipson, C.E., who is disposed to believe that it will prove to be "the best ventilated building in London." He describes the system adopted as being ventilation by insufflation for the supply of fresh air to the hall, bars, &c., and utilising for the escape of the vitiated atmosphere, the means employed for lighting the building. In the basement there is a fan fitted in an air-channel about 4 ft. 3 in. diameter, communicating with the outside atmosphere, and which propels the air into a spacious air-chamber; this air-chamber being used as a heating or cooling chamber at will. From this chamber a culvert, about 6 ft. by 3 ft., semi-arched, conveys the air to the different parts of the hall, bars, and dining-rooms. The air enters the hall in front of the stage, and through perforations in the ornamental iron work over columns, care being taken with a view to admitting the air without perceptible draught. The fan is worked by a small oscillating steam-engine, the waste steam from which is utilised for heating and cooking purposes. The heating of the hall is effected by means of coils of steam pipes placed in the air-chamber; these coils serving for cooling purposes during the heat of summer.

For the escape of the vitiated air, the hollow ribs dividing the ceiling are fitted with notched plates to receive prisms about 15 in. long by 3 in. wide, these prisms being placed so as to allow about ½ in. space between each, for the escape of the air from the hall. There are also flues provided all round the hall for the escape of vitiated air from the level of floor. The quantity of air forced into the building amounts, it is stated, to about 300 cubic feet per inmate per hour; with the means of increasing this quantity or diminishing it as may be required. The ventilation of the boxes is provided for by perforations over doors, and is said to be very satisfactory. The engine moving the fan is also used for the working of a hoist to kitchen, &c., also erected under the direction of Mr. Phipson.

The building has been erected from the designs of Mr. E. Bassett Keeling, and under the superintendence of himself and Mr. H. H. Collins, as joint architects to the company. The general contractors were Messrs. Trollope & Sons. All the ornamental wrought-iron work in the front building is by Messrs. Hart & Sons; and the copper foliations are by Mr. Brawn, of Birmingham. The painting and decorations have been executed by Mr. Geo. Foxley; and the greater portion of the stone carving was done by Mr. Tolmie, and done very well. This is chiefly in the Strand front, which is wholly of stone, five stories in height, and elaborately adorned with sculptured capitals, marble shafts, medallions containing heads of composers (Handel, Mozart, Rosini, Bishop, Mendelssohn, &c., will be noticed) and metal-work. The porch has scarcely an inch of surface that is not carved,—it is overdone, in fact, as is the whole. The architect, foreseeing objections that might be raised to his work, comments in a published account of the undertaking on the difficulties that beset the designer: on the one hand, upbraided for repetitions and the want of originality; and on the other, liable to the accusation of presumption and caprice if he diverge. We willingly give his own argument:—

"He who would deviate from the prescribed road to eminence in either direction [from the beaten tracts] must '*beware of the mantraps and spring guns*,' which, though they may be old and rusty, are still dangerous to those who have not weight and size enough to disregard them with impunity. '*Please to keep off the grass*' is posted throughout the garden of architecture,

and those not content with neatly kept paths laid down '*by order*,' are always liable to be '*taken up*.' Continental Gothic is the basis of this eclectic design, and if the architect has succeeded in erecting a structure which, departing from recognised codes, outrages none, he trusts that unity and comprehensiveness in the execution of a difficult task will obtain for him a just appreciation of his work."

Spite, however, of this deprecation, and giving Mr. Keeling credit for evident skill in drawing, and a fertile fancy, we cannot praise his work as a whole. It is a chief canon in architectural criticism, that a building should speak its purpose so far as that can be done. The external aspect of the Strand Music-hall, with its small, low entrance, and ranges of windows one above another, utterly belies that purpose, notwithstanding the aid given by the sculptured accessories. The strange unfitness for the building behind is shown by a trifling incident: the very first notice board that is required to be put up hides a whole range of windows. Architects, Mr. Keeling amongst the number, may usefully bear this incident in mind. The interior will be better judged of when the possession of adjoining ground admits of its completion, as then the want of symmetry at present existing will doubtless disappear.

THE INCISED ROCK SYMBOLS OF NORTHUMBERLAND.

Mr. Tate has evidently taken much trouble in unearthing many of the incised rock symbols of Northumberland; and, although he was admittedly not the first who discovered such marks on the rocks, he seems, by his laborious researches amongst them, to have made the subject, in a great measure, his own. In endeavouring to theorize a little on it in the *Builder*, however, I do not think that I have been poaching on *his* preserves at all, although Mr. Wilson appears to have thought so: I made no pretence of unearthing any of the symbols, and Mr. Tate has no exclusive patent right to theorize on the subject, even though the raw materials, the "stone and lime," or "bricks and mortar," as it were, for the design or theoretical structure,—as Lord Bacon would have termed the discovered marks,—have been collected chiefly by Mr. Tate: indeed, his own theoretical ideas are little more, it would appear, than a vague or indistinct re-echo of those already suggested by me in the *Builder*; and even his reference to the Laps as probable descendants of the little people of the stone age has been there anticipated.*

All endeavours (such as I have made) to shed a light upon the original meaning and purpose of the British rock symbols, or the Celtic or Druidical doctrines, from Egyptian, Hebrew, or Assyrian (as well as other) symbolisation, are deprecated by Mr. Tate; and yet he himself adduces the analogy, or rather the partial identity, with the British rock symbols, of that very hieroglyph of the Egyptian sculptures,—the circle-and-centre symbol,—to which I have already alluded, as being absolutely identical with one not unfrequent form of the rock symbols. If "our antiquities have no relation," as Mr. Tate alleges, to such Eastern symbolization as that of the Egyptians, Hebrews, or Assyrians, moreover, what does he himself want with the far eastern home of the Aryan family? He is much mistaken in supposing that there is "no relation" between the Druidical practices and doctrines and those of the Egyptians, Jews, Assyrians, and other Eastern peoples of antiquity. I have myself pretty clearly proved the contrary, I think, in various communications of late years in the *Builder*; and it is not I alone who have done so: the mutual and *universal relationships* of mythologies has long been notorious; and it is surprising to find Mr. Tate speaking as if he were totally unaware of this fact. But, indeed, as I have said, he nevertheless refers us himself to the far east of antiquity, beyond even Assyria, or Persia, for relational light upon British, Celtic, or Druidical doctrines and practices and British rock symbols; and his indirect or implied inference that the ideas of the Aryans had no essential relation to, or nothing doctrinal or religious in common with, the ideas and practices of the Assyrians, Hebrews, and Egyptians, is not only a strange one, but has no ground of probability in it whatever.

To have been acquainted with such symbols as the Egyptian circle-and-centre, or the same symbol on the Carthagenian slabs of Mr. Godwin in the *Archæologia*, or in the Hindu caverns of initiation at Salsette; or with the concentric circled sephiroth of the Hebrews, and their known significations; as well as with the circle-and-centre symbol indeed of many—if not of all—nations, and its known meaning; and yet not to have endeavoured to shed some little light of analogy thereby upon the meaning and purpose of the many more or less *identical* British, Celtic, or Druidical symbols, cut upon the rocks of Northumberland, in the sorcery-halls of Ireland, and on the incised stones of Scotland, would have been stupid of me in the extreme; more especially since it is evident, on an extensive comparison of the ancient religious and philosophical doctrines, as well as structures and symbols, of many nations, that, however overrun or interlarded with errors, there *are* most essential principles in each that are decidedly common to all; as indeed even the strictest religionist who believes in the literal descent of all nations from one common centre in Noah and his family *must* allow, however little acquaintance he may have with the mythologies, the philosophies, or the archæologies of the ancients.

As for the fact that the Druids of Britain *had* essential principles in common with the Egyptians, the Hindus, the Buddhists of Thibet, China, and Japan, as well as India; the Assyrians and Persians; the Jews, the Greeks, and the Romans, no one can for a moment doubt who has well considered the subject in all its bearings. There is even a Celtic tradition that the Irish Druids themselves came from Egypt. The great goddess of the British Druids, Ceridwen, has long been identified with the Greek goddess Ceres; Ceres with the Egyptian goddess Isis; Isis with the Hindu goddess Isi, whose husband, Iswara, is identical with Osiris, the husband of Isis. Tacitus found Isis in Germany. In the Metamorphosis of Apuleius we find this "great mother," as she was called both by the Druids and the Greeks, thus speaking of herself, by "a voice," to the initiated,—or the ancient and initiated author of the book, at least, thus speaking in her name:—

"All nations acknowledge my power. The Phrygians call me the mother of the gods, the inhabitants of Cyprus, Venus, those of Athens, Ceres; but in Egypt . . . sages, learned in *the ancient doctrine*, have called me Isis. Under all these names, and with many different ceremonies, I am the only deity whom the universe invokes."

One other author, a comparatively modern one, Le Clerc, I may here quote to essentially the same effect:—

"Everything was connected in ancient theology; every thing had a relation to one universal principle, which, though produced under different forms, remained always essentially the same." And again,—"Of this we may be easily convinced, by attending to the spirit of all those systems [of religion] that have hitherto been promulgated to the world: the amazing conformity that subsists among them all is sufficient to show, if we had no other evidence, that they have but one common origin."

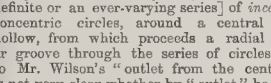
The grand question, however, is,—what can be the meaning of it all? In my letters on Wing and other Symbols; on Geometrical Symbols; on Rock Symbols; and in various other communications, to the *Builder*, I have not only endeavoured to show what *is* the meaning of it all, but have given the psychological key, as I conceive, to much of the mystery. But to return just once more, for a moment, to the subject of the *relationship of our antiquities* to others throughout the known world of the ancients;—the singularly extensive archæological connexions, correlations, and ramifications, of structures such as the Celtic or Druidical barrows, to which Mr. Tate more than once refers as being associated with or related to the rock symbols, are specially and quite popularly recognized; as witness the following abridgment of an excellent summary of them in Miss Corner's volume on India (p. 472), in "Bohn's Illustrated Library."

Many of the Buddhist remains found in central India* bear a close resemblance to the Druidical remains which yet exist in our island; on the coast of Brittany, and in other parts of Europe. In India, tumuli or massive mounds are surrounded by mysterious circles of stone pillars, recalling, at every turn, the figures of the ancient barrows, and the Druidical colonnades, of our own island. In the *horse-shoe temples* of Ajunta and Sanchi, on the Ganges, may be recognised the form of the inner colonnades at Stonehenge, on Salisbury Plain. There are cromlechs in India, as well as in Britain. The bas reliefs of Sanchi clearly display the worship paid by the early Buddhists to trees,—a counterpart of the Druidical and adopted English reverence for the oak [and of the Druids for groves]. Philologists have conjectured that Buddha is most probably the same as the great god Buddwas, considered by the Welsh as the dispenser of all good. The younger Pliny says,—'Even to this day Britain celebrates the *magic* rites with so many similar ceremonies that one might suppose that they had been taken from the Persians.' Persia may be said, in a Buddhist sense, to be linked with India by a long loose irregular line of barrows, colonnades, and cromlechs. These barrows or topes are traced here and there from Central India to the Punjaub, to the regions beyond the Indus, all through Afghanistan and Khorassan, onward to the Caspian sea, and thence all through Persia. It is continued across Asia Minor, and all through Asiatic Turkey, as far as the limits of Syria and Egypt. They re-appear in Bessarabia and in nearly every part of Greece; and from the eastern parts of Europe the chain of topes is continued to most of the countries to the west and north, and to our own shores. Dr. Rost, and other learned Orientalists are convinced that the word tope was originally derived from the Sanscrit word *stupa*, which signifies a barrow or mound, or conical elevation, whether of simple earth, or built up in masonry. Most of them are solid masses of masonry erected on some hillock or natural elevation. Others are hollow within, having small vaults and chambers.

In the "Archæologia," vol. ii., p. 250, on the other hand, the chambered barrow order of structures is traced "through Denmark, Sweden, Russia, and Poland, to the steppes of Tartary."

The curious analogy between the pyramids of the Egyptian magi, built of solid masonry, with their long low and narrow passage, and central chamber; and the immense pyramidal loose stone barrow of the Druidical magi at New Grange, in Ireland, with *its* long low and narrow passage, and central chamber, devoted to magical purposes, being a "sorcery-hall," with its circle-and-centre, and its other stone-incised symbols about it, goes far of itself to show that there *was* a very close relationship of ideas between the Egyptians and the Druids of the British Isles; as indeed does the general fact that the doctrines and practices of both, as well as those of the Assyrians, Chaldeans, and ancient Persians, were all magical. That the Egyptians, Assyrians, Chaldeans, Persians, and Hindus, in short, *had* much in common with the Druids, both symbolically and doctrinally, is well known, and has already been still farther shown, in connexion with special doctrinal and explanatory views, in the *Builder*.

The very form of the sorcery-hall barrows, I may here remark, is as it were indicated in the general form of the rock symbols. In these barrows the central chamber or cell, with "the tomb of the hero" in "the house of the god" or "great mother," was the chief feature. This chamber at New Grange was so inscribed. It was not only surrounded by the circular base of a conical pyramid or barrow, and that by a circle or circles of stones, but a long passage, or inlet and outlet, ran through the whole from the circumference to the centre. And this reminds me that the form of one of the rock symbols of Northumberland—that of a cross—is similar to that of the plan of the central chamber at New Grange. The centre of one of the symbols (fig. 2) given in the *Builder* of 3rd September, has also a crucial or trefoiled appearance.



A careful consideration of your review of Mr. Tate's very interesting and curious rock-symbol discoveries, together with a cursory examination of the drawings of some scores, or even hundreds, of these symbols, only confirms me in the belief that above all else there was a manifest intention, in their origin, to draw special and impressive attention to the centres of the ever-varying number of circles, semicircles, segments of circles, and other curves; and that these centres and curves had also symbolical allusion to the concentrative and radiative *principles of life*,—each symbol representing probably an individual life; and perhaps also to the theurgical or *active processes* of mental concentration and radiation—or actual inlet and outlet—in break-

* In an article on the Maeshowe and Runes in Orkney, in the *Builder* of 16th August, 1862, is the following passage:—"The similarity of the curious cryptic runes in the sorcery hall at Maeshowe to those of Baffin's Bay, appears to bear favourably upon the probability of the truth of our suggestion [at a still earlier date] that the Maeshowe is of Pictish origin; and that the Picts were descendants of a tribe of little men comprehending the forefathers of the Laps, and perhaps those of the Esquimaux, at a time when the glacial envelope which still encircles the pole spread far further south in the winters, and formed the glacial and drift era which spread over the northern continents and islands,—our own as well,—and amid the wreck of which era the flint and stone arrow-heads and hatchets of this very tribe of men have of late years been found. The modern Laps are still a strange race of dwarfs, whose native priests are magicians, of whom curious tales are told, and so susceptible to every impression are the Lap people, it is said, that the sudden clapping of hands, or a startling noise of any kind, will cause them instantly to fall into a state of entrancement."

* Buddhism, with its doctrine of Nirvritti or Nirvana, or mystical annihilation or destruction, was pre-Aryan in India, as is shown by the Vedas themselves, which speak of finding "the terrible Nirritti, the goddess of destruction" or "goddess of death" like the Druidical Ceridwen to be the native Indian goddess, whom, at length, even "the white-visaged friends of Indra" feared. The Brahminism which was subsequently developed was for a time partially rivalled by a *revival* of the native Buddhism, which, afterwards, the Aryan Brahmins finally suppressed, expelling many of the Buddhists, who emigrated westwards.

ing through the mental circles* *to* and *from* the one common centre of concentration and radiation, (as in the double spirals,) whereby the god-spell was *worked* and *reversed*, the divine oracular life of entrancement evoked and suppressed, or the magical spirits raised and laid. The probable relationship of the symbols to *Life*, and to the transition or transfiguration from lower to higher life and "thence returning," as I have suggested, Mr. Tate himself partially re-echoes; and the very terms in which he and Mr. Wilson unavoidably describe these symbols in general, as *concentric* circles with *radial* grooves, imply an intuitive though imperfect perception of a connexion of such symbols with concentrative and radiative principles.

Mr. Wilson described the most characteristic and general form of the symbols as consisting of a central hollow and three concentric circles, with one "outlet from the centre;" but it now appears that "the most common form is composed of a series [not three in particular, then, though these are very frequent, but an indefinite or an ever-varying series] of *incomplete* concentric circles, around a central round hollow, from which proceeds a radial gutter or groove through the series of circles." As to Mr. Wilson's "outlet from the centre," it is not very clear whether by "outlet" he meant this "radial groove" or the open space left by the frequent and designed incompleteness of the circles, which are often all but complete, leaving only a narrow "outlet" or "inlet" between the terminations of the curves (which terminations are *generally* in a line with one another), while the "radial groove,"—quite a distinct and separate thing,—runs often through the open space or outlet itself, as under (Fig. 1):—

There is not unfrequently, however, an "outlet from the centre,"—or an inlet to the centre, as we may equally well call it, or both,—without *any* radial groove (Fig. 3); and sometimes there is a "radial groove" without any outlet or inlet, or incompleteness of circle at all (Figs. 2 and 4).

By the way, the example given in my first letter on the subject, in one view,† has only a

Fig. 5.

single groove or pointer-out of the centre after all (Fig. 5); only it crosses the whole diameter of the circles like one of those just given; and it is a remarkable feature of this single groove or pointer in my first letter, that while, in crossing, it obliterates its breadth of the line, or curved hollow, of every circle; the central round hollow, on the contrary, obliterates *it* in its crossing; so that this groove or pointer might be compared to a needle or pin lying across and above the engraved circles on the paper, but, at the central hollow, stuck through the paper, and behind the centre, going in at one side and coming out at the other, as it would do if intended to point attention to the central hollow in particular.

That the one pre-eminent feature in the symbols is the centre seems to be shown by Mr. Tate's own intimation that, while the circles (or curvilinear and concentric *hollows* as *they* may just as well be called, as the centre a round hollow) are from half an inch deep to a mere trace, the central hollows, pits, or openings, are deeper, even to as much as an inch and a half. This might have almost led to the idea that the centres only became hollows unavoidably, and also deeper than the circles, merely because the one point of a pair of compasses in every centre of circles tends to form a deepish mark in an impressionable surface, according to the number of circles (of less depth) which the other point is forming. It is evident, however, that none of the symbols have been made with compasses at all; and, indeed, many of them display only the rudest and most sprawling attempts possible at circularity of sweep round the centre. Take this as an example (Fig. 6).

Fig. 6.

It cannot be thought that such sculptors could have themselves had very enlightened ideas as to the meaning of even their own symbols: probably such ideas had even then merged into mere superstitious imitation of still more ancient practices.

As to the number of circles, or segments of circles, or other curves, it is notable that *three* circles are described as very frequent; and also that Mr. Tate tells us that *seven* circles are the *highest* number he has seen. Now, if we regard the central mark as pre-eminently symbolical of the Concentrative, or Soul, or Fire Spark of the Mystics (as I have shown has long been also done by myself, in my note-books); and the circles, on the contrary, therefore, of the Radiative or Spirit, or Light of the Soul's "vital spark;"—although we may (as I have also done) regard the centre (viewed *as* a mere *point*) to be the one common and "sovereign centre of both Concentrative and Radiative, Life and Light, or Soul and Spirit," and the circles as the "subdivisions of the mental radio-concentrative organism,"—or not only concentric but radiating (like the circles concentrically radiating from a central point, where a stone has been cast into water);—we have the circles then symbolical of the microcosmic Light, or Radiative life,* "in the Spirit," or in the inward "heavens" of human *Life*;† and it is notable, in this view, that the internal heavens of the divine oracular life are mythologically and religiously regarded as comprising, in all, *seven* circles, spheres, or subdivisions; and that while "the *third* heaven" is specially alluded to by St. Paul and others, "the *seventh* heaven" has usually been held to be the *highest* and most completive heaven of all, in the ecstacies of human nature. In Davies's British Druids we are told that "there are *seven* skies [heavens], or spheres [or circles], *over* the *Head* of the *diviner*;" and in the Bible there are curious allusions to the diviner, and to the Sun in his "*heaven*;" such as, —"*Night* shall be unto you that ye shall not have a vision, and the Sun [of secrism—the Sun which rises "in the night"—the internal and "midnight Sun"], shall go down *over* the prophets [or not "stand still" *over* their *Heads*]; and the Day [of the Lord, which cometh, like a thief, in the night"] shall be dark over them. Then shall *the seers* be ashamed, and *the diviners* confounded . . . . It shall be *dark unto you that* ye shall *not divine*" (Micah. iii. 4, 6).

Viewed in this light, the varying curves of the rock symbols and the sorcery-halls may have also denoted varying indivi-dual developments or manifestations of the radiative, or luminous, and heavenly, divine, oracular, and magical life of entrancement in the Druidical priestesses and priests; and the curious concatenations of connected rock-symbols, not only in twos but manifold, may have denoted various closer or more local brotherhoods of "diviners," female and male, among "the deathless brotherhood" in general of the Druids.

I have alluded, in treating of Geometrical Symbols, (6th June, 1863,) to the mystical doctrine of Jacob Böhm, as to the *Fire* principle, which he and others identify with the Concentrative, in the form of the principle of attraction in nature, as the "wrathful principle;" and in my first letter on Rock Symbols I have quoted the idea held by some ancient religionists that *the point*, within the circle, denoted the *central Fire*, or God the Father, and Creator, the source of the Life spark, or Soul; the circle surrounding it denoting the eternal *Light* of that *Fire*, or Spirit of that Soul. Now it is a curious fact that amongst the Northumbrian rock symbols there is one, seen at Horton Moor, in which the central point, or pit, as Mr. Tate sometimes calls it, forms the head of a lizard-form, such as I have seen depicted as that of the salamander, or the Fire life itself (Fig. 7).

Fig. 7.

The references (often no doubt emblematical) to circles, round a sacred and pre-eminent centre, in the Druidical mythology, are so frequent, like their stone circles, and so well known, few as the records are, that it is scarcely requisite to instance them in connexion with their rock and sorcery-hall symbols. As I have hitherto said little or nothing specially on this subject, however, (and as the psychological key already given is capable, I think, of shedding some light upon it,) I may here give an example or two, from such works as those of Davies, Nash, and Toland, without any very formal attempt at psychological explanation.

"Rapidly moving, in the course of the sky, *in circles* [not in one circle, probably, therefore, but in concentric circles, of indefinite or varying number, round the Cromlech, Kistvaen, Beddau or Bedd, altar, or resting-place, stone of power, chair, or throne, of "the glorious god," the *Deon*, Hu, or Hee, "*the Life of all that are in the world*," who "died and lived alternately," and was "the regulator *between* heaven and earth"—the one sovereign centre *between* the Radiative and the Concentrative] in uneven numbers [like the "*nine* damsels" round the cauldron of Ceridwen, and reminding one of the *nine* muses round Apollo: and of the *thirteen* priests round the *Deodn* among the Bodos and D Himals of the Sub-Himalayas] Druids and Bards unite in celebrating *the Leader*" [in the emblematical as well as literal centre—the place appropriate to the Druidical Deoda or Apollo,—the "radiant Hu"—the Divine Sun, or the Irradiater].

The central hollow, or pit, of the symbols reminds one, also, of the central position of the mystic or emblematical vase or cauldron of Ceridwen—the central and entrancing source of "inspiration and science."

"Whilst *the circular revolution* was performed . . . . the assembled train were dancing . . . . and singing, in cadence, with garlands on their brows. Loud was the clattering of shields *round the ancient cauldron*, in frantic mirth;"

like Bacchantes round Bacchus, or Hyarogenios, the god of the *Spirit*.

The mystic and sacred cauldron of Ceridwen, "the goddess of death," and yet "the great mother" of life, from whose womb the Taliesin of "the radiant front" had his second birth, after a nine months' novitiate, "was viewed," says Davies, "as a source of inspiration: Taliesin acknowledges the same cauldron as the fountain of his genius."

"Ceridwen, the British Venus and first of womankind,—the great mother,—from her alone were the Druidical secrets to be got in purity and perfection. Those who aspired to *the chair* of presidency [as the radiant Taliesin or high priest of the mysteries] required to taste of *the waters* [the "living waters"] *of inspiration* [as an oracle,] from her *sacred cauldron*."

As to the square-shaped and enclosed or ramparted marks among the rock symbols, with round spots, as of dwellings, within; I may remark that the "*quadrangular* enclosure,"—the "*quadrangular* caer or sanctuary,"—the "sacred enclosure," the "*fenced* enclosure," with its "*barriers*," over which the light bounding witch steed of Hee leaped;—and the "*pavilions* of the distributor," or pervader, disperser, or radiater, "in the *city* of the *just*, in the *land* of *rest*," and containing the magical cauldron of the witch goddess, Ceridwen,—are all of them mystical or mythical, religious, or doctrinal allusions, in the poems of the Taliesin, and other Druidical records.*

But I had no intention, when I began the present communication, to re-enter on the subject explanatively or theoretically; (what I *have* here

---

* "The kingdom of *heaven suffereth* violence; and the violent *take it* BY FORCE." "Enter *boldly* to the holiest," the sanctuary;—"*Strive* to enter in." *Importunacy* is requisite to rouse the sleeping giver of the heavenly bread of life,—the holy Spirit of Christ.

† I have purposely placed this symbol in a reversed position to that before given, as this seems to show its peculiarities more distinctly.

* I observe the radiated circle, or circle with diametrical rays on its outer margin, of the Irish sorcery-hall, amongst the Northumbrian symbols; and it is incised in so remarkably similar a way, both circle and rays being merely notched into the stone, that it looks absolutely as if it must have been done by the very same rude sculptor.

† "They shall not say, Lo here! or Lo there! for behold the kingdom of *God* [the kingdom of *Heaven*] *is within you*," and hence it is "within" and "upon" man that the Divine Sun light of that *heaven*, in its radiating circles, shines *on* the "illuminated," or the "God-possessed."

* The heavenly state, or radiative life, is often compared to a city in the sacred Scriptures,—such a "city" as Abram "sought,"—the city of "Jerusalem above," the heavenly city, the city of rest: as well as to a house or tabernacle (or pavilion),—the "heavenly house;" to a land,—the heavenly Canaan; and to a garden,—the garden of Eden or Paradise, which St. Paul identified with "the third *heaven*," or the heavenly house, or *solar* chamber, of his tabernacle, temple, or body, into which he was "caught up," at his transfiguration, or conversion, on the way to Damascus.

said in this respect requires reference to former letters;) and I must now conclude with the reiteration of my conviction that nothing Mr. Tate has discovered, so far as I can see, is inconsistent, even in the slightest degree, with what I have already suggested; but, on the contrary, that everything corroborates and supports my ideas of the general meaning and purpose of such symbols. JOHN E. DOVE.

LIVES OF ENGLISH ARCHITECTS, BUILDERS, MASTER MASONS, &c.

A DICTIONARY SUGGESTION.

I WISH to point out to you a work that is sadly wanted in the literature of Art in England. We have more than one dictionary of painters and engravers; but we are without a dictionary of architects, builders, sculptors, engineers, and masons, who have wrought in England. A dictionary of the kind I mean would comprise the names, and the facts in the lives, of all who have wrought worthily among us, from Gundulphus, Geoffrey de Noiers,* and William of Wykeham, to John Thorpe and Nicholas Stone; from Inigo Jones to Sir Christopher Wren; from Sir John Vanbrugh to Sir William Chambers, down to the days of Sir John Soane and Sir Robert Smirke, of Wilkins, Wyatt, Wyattville, Pugin, Cockerell, and Barry. Then for the engineers, much might be told of moment about them that Mr. Smiles has missed (interesting as his volumes are), from the days of Peter of Colechurch to Mr. Bazalgette; or from Isambard de Saintes, architect of the first bridge *over* the Thames at London, to Isambard Brunel and the first bridge *under* the Thames at London. The names of living architects and of the engineers of the railway bridges over the Thames at Blackfriars and Charing-cross, and of the noble embankment now at last proceeding in earnest, may be safely left to another generation and another edition of the proposed dictionary.

In a compilation of the kind I suggest as needed, care should be taken not to omit the names of men who in former days were known as clerks of the works, masters of the works, and surveyors of the works. The general use of the designation "architect" is of comparatively recent origin.

Some new names might be worthily added to the catalogue of builders of note in former times. Thus it was my good fortune to discover the name of the architect of the palace of the Protector Somerset, on the Thames, in London. His name was Henry Lewes, and he [illegible] "clerk of the works."

When Inigo Jones was busy in London as "surveyor of our works," his master, King Charles I., had another builder or architect in Scotland. This was Sir Anthony Alexander, son of Alexander Earl of Stirling (the statesman and poet). The name is not in "Walpole," though in the works of so charming a poet as Drummond, of Hawthornden, is a "Pastoral Elegy" on his death. He was master of the king's works in Scotland, and dying in London in August, 1637, was buried at Stirling. The poem to his memory contains some beautiful passages; witness the following:—

"How oft have we, environ'd by the throng
Of tedious swains, the cooler shades among,
Contemn'd earth's glow-worm greatness, and the chase
Of Fortune scorn'd, deeming it disgrace
To court inconstancy. How oft have we
Some Chloris' name graven in each virgin tree;
And finding favours fading, the next day
What we had carved we did deface away."

Thus we find that one master of the king's works in Scotland inherited his father's skill in poetry. A little diligence among our northern antiquaries would possibly be rewarded by the discovery of some example of Sir Anthony Alexander's skill in the noble art of building well.

Contemporary with Alexander lived another builder-architect, William Aytoun by name; doubtless some relative to Sir Robert Aytoun, the poet and secretary to Henrietta Maria, the queen of Charles I. Sir Robert died in 1637, and his monument in the ambulatory of Westminster Abbey carries a characteristic bust of the poet in copper, the work of Francis Fanelli, a Florentine; "Fr. Fanellius, Florentinus, Sculptor Mag. Brit. Regis."

This mention of Fanelli will possibly pardon the introduction in this place of a new *fact* about Fanelli connected with a great name in the history of art in England; and wholly overlooked by Walpole and his editors. In the will of the collector, Earl of Arundel, who died in 1646, is the following passage:—

"For my body, I bequeath it to the earth of which it is a part, to be buried at Arundel without all funeral pomp;* to have a convenient tomb, of a sitting figure of white marble or brass, with such an inscription in Latin as I have acquainted Junius withal, to be designed by Seigneur Franceso Fanelli, if it may be."

This statue, if ever executed, was never erected. A member of the Arundel Society can possibly tell us something more about it than has hitherto attended my researches, and the researches of abler antiquaries and connoisseurs than I can lay claim to be.

Two other names that well deserve admission into a dictionary of architects have lately come to light through the researches of Mr. R. W. Mylne. These names are "John Mylne, King's Principal Master Mason, 1648;" and "George Thomson, Architect, 1634." Mylne was engaged on the fine steeple of St. Giles's Church, in Edinburgh; and Thomson on King's College, in Aberdeen.

If the gathering and garnering of minutiæ of a like kind to the materials I have been pointing out appear of little consequence in the eyes of some of my readers, I would wish them to remember that a great English poet,—no less a person than Thomas Gray,†—was pleased to be an annotator of Walpole's "Anecdotes," and to commit to paper notes on a little name like that of Robert Adams, whose epitaph in old Greenwich Church described him thus:—"Operum Regiarum Supervisori Architecturæ peritissimo," ob. 1595:—Simon Basil, Operationum Regiorum Controtrotulator, posuit 1601." Simon Basil, who erected this monument to Adams, was Adams's successor as surveyor. Basil was succeeded by the illustrious Inigo; while Inigo's successor was *not* Webb, his kinsman and assistant, and able withal, but Sir John Denham, a true poet and no architect, who in a few years made way for England's greatest architect, Sir Christopher Wren.

All that Walpole and his editors tell us of Robert Adams and Simon Basil may be found in half a page of the last edition of Walpole.‡ I purpose to tell your readers more about them in my next communication, and thus assist in obtaining the Dictionary many would like to see, and many are in need of.

PETER CUNNINGHAM.

* Architect of Lincoln Cathedral, and an Englishman by birth.

* And yet, when alive and in the presence of others, he carried in his look and bearing the haughty blood of "all the Howards."

IMITABLE FEATURES OF THE RAILWAY PERMANENT BENEFIT BUILDING SOCIETY, EUSTON.§

MANY years have elapsed since we had, in this country, an alarm at the diffusion of Communism. It is quite time we had another, for the principle is spreading. Communism is a disagreeable scheme, in which it is concerted that everybody shall do something, and everybody enjoy something; whereas we have hitherto lived in a far more convenient state of things, where those who receive the least do the work, and those who do nothing get the enjoyment. However, innovatory people, who will not let well alone, are altering all this. The high roads now are everywhere being made not only spacious but pleasant, which is the Communism of Towncomfort. The regulated Parliamentary train and emigrant vessel are part of the communism of travel. Public buildings, and parks, palaces, galleries, and museums, belong to the communism of recreation. Working men's clubs, baths, washhouses, national schools, schools of design, post-office savings' banks, Mr. Gladstone's device of Government annuities, model dwelling-houses, are so many forms of the communism of comfort, of cleanliness, of education, of art, of economy, and health, which is a recognition of the right of the common people to a high condition of competence and enjoyment. Oppression is now considered a discredit to a ruler—the existence of extreme inequality a disgrace to statesmen,—suffering the juvenile population to grow up in ignorance, a municipal crime. The poverty of the workman is treated as a scandal to the employer. It is beginning to be recognised as the business of the physician to prevent disease, of the clergyman to prevent crime; and we are confessedly approaching that state, foretold by Morelly, in which "it shall be *impossible* for a man to be depraved or poor."

Two conspicuous steps towards the competence of the industrious and provident workman, to which of late years attention has been paid, are land and building societies. Both have political as well as social influence. Land societies are likely one day to correct the monopoly of the soil, as building societies have already extended the franchise in counties and towns.

A building society is an invention whereby a man, instead of paying his rent to his landlord, pays it to a committee of his friends, who reward this alteration in his habits by presenting him, in due course, with the house he lives in. The societies for doing this being called *building* societies, have deterred many persons from joining them. The very term "building" calls up an unwelcome vision of excavators, hod-men, masons, scaffold-poles, plasterers, damps, and early rheumatic attacks. Not a tenth of the members of these societies ever do build. They *buy* houses, and these societies are properly house societies.

The first kind of building or house societies came into existence thirty-four years ago, and were what was known as *terminable*. They were constructed to be wound up somehow commonly at the end of ten or fifteen years. Those members who joined in the first year had a chance of doing pretty well: all who joined after never knew what they had to pay, and seldom obtained what they expected. The success of these *terminable* societies depended, not upon the prosperity, but upon the misfortunes of the members; the profits being made out of fines, forfeitures, premiums, biddings, and similar clumsy confiscations. There was no mutual principle in them. The shareholders made the profits, and the members made the losses.

About the year 1845, Mr. J. H. James, an actuary, originated, as he himself attests, the plan of permanent societies. However, it is Mr. Arthur Scratchley's arrangement of the plan which appears to have found general adoption. A permanent society always exists, as its name implies. A member may join at any time, and the last member is on as good a footing, as to advantages, as the first. The calculations are based on scientific data, the mutual principle regulates the interests of investors and borrowers, and mutual advantages, consistency, certainty, and simplicity are obtained.

A society of this description has, for fourteen years, existed at the Railway Clearing House, London.

A large body of men of all ages are congregated in railway establishments. One of the largest is at the Clearing House at Euston. The attention paid there to the personal welfare of the employed, by putting in their way means of self-help, is very great. In manufacturing establishments of thirty years ago, workmen were, and to a great extent they are now, *suspected* who save money; and they are afraid to be known to do it, lest their wages should be reduced. The more enlightened policy of the railway authorities at Euston (of which one of the vice-presidents of this department, Mr. Brown Westhead, M.P., is deputy chairman), is to encourage provident habits and to create facilities for practising them. This is a feature of the Building Society established at the Railway Clearing House.

How well the Permanent Building Society established there is devised and conducted a few facts will show:—

	1851.	1863.	1864.
Number of members	83	397	435
Subscriptions of investing members	£1,936	£6,258	£6,790
Loans	350	9,961	9,364
Advanced to borrowers	2,200	9,200	4,425

Total subscriptions received from investing members	£60,353	
Total loans received	46,601	
		£106,954
Advanced to borrowers		56,900
Repaid to investors (paid up shares)		38,283
Interest to investors	£4,853	
Bonus to investors	2,600	
Interest paid on loans	2,408	
		9,861
Total amount circulated among its members		£211,998

Its shares current in 1851 were	368
Ditto do. in 1864 were	2,469
Number of houses purchased, 187, amounting to 56,900*l.*, estimated to be worth 70,000*l.*	

Mr. S. W. Brooks, of the London and North-Western Railway, Euston, is the president of this society. Mr. John Noble, of the Railway Clear-

§ A paper read in the Social Economy Section at the York Congress of the Social Science Association, by Mr. G. J. Holyoake.

ing House, is the watchful and accomplished secretary. Mr. Thomas Holbein, Mr. W. W. Gent, Mr. P. W. Dawson, and other gentlemen, officially connected with the London and North-Western, and other railways, are directors.

The advantage of a management consisting of gentlemen of accredited position and business knowledge is incalculable. It secures confidence and responsibility. The majority of persons do not know a good society from a bad one; and if the intrinsic difference is explained to them, they do not understand it. Englishmen are constitutionally weak in arithmetic. They suspect that Eve was tempted with the multiplication-table, and they are sure that decimals came in with the Fall. James may write, Scratchley may calculate, Mr. Tidd Pratt may extenuate, and Thompson expound, the laws of building societies; but the majority know no more of what they say, than the historic savage knew of the watch he found: he thought it alive because it ticked, and would have admired it if sure it would not bite him. The working classes always look at building and insurance societies of all kinds, doubtful whether they are going to be bitten or benefited by them. And as they very often are bitten, as Mr. Gladstone lately explained to Parliament, there is some excuse for their indecision. It is an act of social mercy, therefore, when gentlemen of recognised position and known knowledge consent to manage one of these societies. The authorities of the Clearing House not only do this, they also give a room rent free, in which the building society is held, and conduct its affairs at a nominal cost, and, what is more, throw the society open to inhabitants of the neighbourhood, who have the same confidence in its security as though the Government conducted it. While a crowd attends to pay subscriptions, a very small number of the members attend the annual meeting. Sometimes not a tenth part are present; sometimes not a twentieth part. Their absence is a proof of implicit confidence. Absence implies confidence in the matchless management which never fails them. Were the property or profits of the members endangered, a crowd of alarmed or indignant subscribers would be present, eloquent with that constitutional capacity for grumbling which an Englishman believes was secured to him by Magna Charta.

The features of this society cannot be better summarized than in the words of the president, Mr. S. W. Brooks, in a recent explanatory speech to which I had the advantage of listening.

"Those who deposit money in this society," said Mr. Brooks, "find it a savings-bank which, during fourteen years, has given its members, in dividend and bonus, in no instance less than 7½ per cent. per annum. It has repaid to its depositors upwards of 38,000*l.*, and has realised for them profits of upwards of 7,000*l.*; and has paid to lenders of loans upwards of 2,000*l.* showing a gross profit of 10,000*l.* on savings—and that chiefly among a class who do not usually save, mainly because the machinery whereby they might invest is not adapted to enlist their interest and win their confidence. The gross value of the house property it has enabled its members to purchase, is 70,000*l.* It may fairly be assumed that scarcely any portion of it could have been acquired but through the society's instrumentality. In this society the table of payments to be made by borrowers is embodied in the rules, and it represents the total amount which they are called upon to contribute, and *nothing more is ever demanded* from them, under the name either of bonus, entrance fees, or contingent expenses. Intending members can ascertain at a glance what their total future payments will be, and they are thus secured against being subsequently called upon for additional payments, of which they may have had no very accurate idea on first applying for an advance. And there is ample evidence that the scale of payments adopted on advanced shares contrast very advantageously with the terms with which advances can be obtained from any other sources. These payments are altogether unaffected either by the current rate of interest for money, or by the urgency of the demands for accommodation. However high the rate of interest in the money market, this society continues to lend its money to members as if no such pressure existed. There is, in this society, no bidding for advances; no premium or entrance-fees payable by borrowing members; the costs attending the survey of property upon which advances are made, the investigation of the title, and the preparation of the deeds required by the rules, are borne by the society. The society is open to all persons, whether connected with railways or not; and advances are made for the purchase of property situate in any part of the kingdom."

Nothing could exceed the weight, completeness, and good taste of this statement. Looking around for a society which I could take as an example, none seemed so suitable as this upon which I speak. It never advertises: its unobtrusiveness, its economical and successful management, the responsible character of its administration, make it an instructive example for public imitation.

Many building societies have suffered disastrous shipwreck. As soon as a number of honest inexperienced men get together for any purpose, there are a class of plausible knaves down upon them immediately. Land sharks founded many land societies, and still conduct them. They buy worthless land cheap, and form societies to buy it at a high price. Lawyers of a speculative turn, in whom ingenuity is strong and conscientiousness feeble, have given building societies a turn, and battalions of officers, directors, and secretaries have grown fat upon members. Builders, too, whose talent lay in erecting houses that nobody would buy and nobody ought to inhabit, have originated building societies to take them. And hence these societies are in many cases regarded with well-founded distrust and dislike.

Mr. Brooks, the gentleman whom I have quoted, stated that the directors of a large mercantile establishment, equal in importance to many of the Government departments, had prohibited their clerks from becoming connected with building societies in any capacity whatever. It will be a satisfaction to the principals of this and similar establishments to learn that the managers of a great department like the Railway Clearing House have themselves established one of these societies on wise principles, yielding secure and profitable results, conferring the greatest benefits on its members and on the whole neighbourhood around the society.

It would be a great advantage if those house societies which do build, would take the wise advice of Sir John Pakington, on Friday night, or at least introduce some style of tenement worthy of these days. The domestic architecture of our towns has descended to a mere bandbox style. It is seldom that you meet with even a respectable modern house which does not seem a fragment of the Millbank Penitentiary. A foreigner would take one of our homes to be a house of correction. Our builders have exhausted all the genius of grimness in the construction of our dwellings. Whoever hereafter shall come to study the ruins of this nation, will no doubt conclude that England is the Botany Bay of the British race, and that we were punished here, and lived somewhere else. Why should not stout timber, honest brick, mortar, and iron, be made to take some picturesque and wholesome shapes? The late Prince Albert, with that practical kindness which was part of his character, did put up model cottages, which had the glory of a gallery in front. The love of home is a holy feature in the character of Englishmen; why should not a home be a cheerful place, which it should be a gladness to live in, and a daily pleasure for your neighbour to see? Of this city I do not speak. Here all that is old enchants you. All that is secular is quaint, and that which is sacred is almost sublime; but it is nevertheless a fact that there has not been put up in England for two centuries a single house from which it was intended that the inmates should see a sight in the streets.

In connexion with this subject it ought to be said that in many cases these societies, by imparting to men who never had anything, nor expected to have anything, the sweet taste of saving and possessing property, have demoralised some useful men. Mr. Arthur Ryland informs me that in Birmingham numbers of persons under the influence of these societies have forsaken patriotism for profits. And I know both Co-operators and Chartists who were loud-mouthed for social and political Reform, who now care no more for it than a Whig Government; and decline to attend a public meeting on a fine night, while they would run like a rat up a sewer after a good security. They have tasted land, and the gravel has got into their souls.

Yet to many others these societies have taught a healthy frugality they would never else have known; and enabled many an industrious son to take to his home his poor old father—who expected and dreaded to die in the workhouse—and set him down to smoke his pipe in the sunshine, in the garden, of which the land and the house belonged to his child.

These fine instances of benefit are not to be obscured by cases of selfishness which always occur in the transitious state of men from bad to better. As Tacitus says: "There are more willing slaves who make tyrants than there are tyrants who make forced slaves!" There are always people who are born mean, and who like to crawl and to be kicked. If you examine their bodies when they are young, you may see the place where indentations of the toe are intended to be received. When such men get money they always turn out fools. But this class of people are a good deal generated by the greed which never knows when to stop, which they see in the classes above them.

Mr. John Stuart Mill, in his chapter on the "Stationary State," in the last edition of his "Political Economy," says,—"I know not why it should be matter of congratulation that persons who are already richer than any one needs to be, should have doubled their means of consuming things which give little or no pleasure except as representive of wealth; or that numbers of individuals should pass over every year from the middle classes into a richer class, or from the class of the occupied rich, to that of the *unoccupied* ..... *What is economically needed is a better distribution*" of property. These words are a protest against that insatiable greed of wealth which demoralises the rich class and misdirects the poor. These words put a ban upon the hungry accumulators; and no wiser, more merciful, or more needed words have been spoken in our time. The interest which attaches to land and building societies is owing to the means they present for the attainment and better *distribution* of property among the proletariate of the land. Some poor knaves will be fattened in the process, but a far greater number of honest men will be made happy by it.

REPORT ON ST. JAMES'S, WESTMINSTER.

The eighth annual report of Dr. E. Lankester, the medical officer of health for the district, has been presented to the vestry, and printed. It contains some very instructive tables and comments on the condition of the inhabitants, male and female, their occupations, state of workrooms, and of health, &c. In reference to the tables of occupations, the reporter says;—"These tables will afford interesting subjects for further consideration in future reports. A glance at them will supply certain broad features, distinguishing the population of this parish from many others. Of the 12,000 women above twenty years of age, nearly 5,000 have no occupation, 3,800 being wives, and another 1,000 being dependent on others for their support. On the other hand, the male population seems very actively engaged, as we have only 240 persons returning themselves as unemployed or dependent on others. The wealth of the population is at once seen by the fact that more than a ninth of the whole population is employed in domestic service. This includes 3,000 maid-servants, and 1,200 men-servants. Amongst the men are 1,730 tailors, and amongst the women 485 engaged in the same occupation, making altogether a population of 2,265; thus indicating that a fifteenth of the whole population is engaged in this business. Of the boot and shoe makers, 763 are men and 450 are women. Amongst the women there are 766 milliners and dressmakers, 310 shirtmakers, and 340 laundresses.

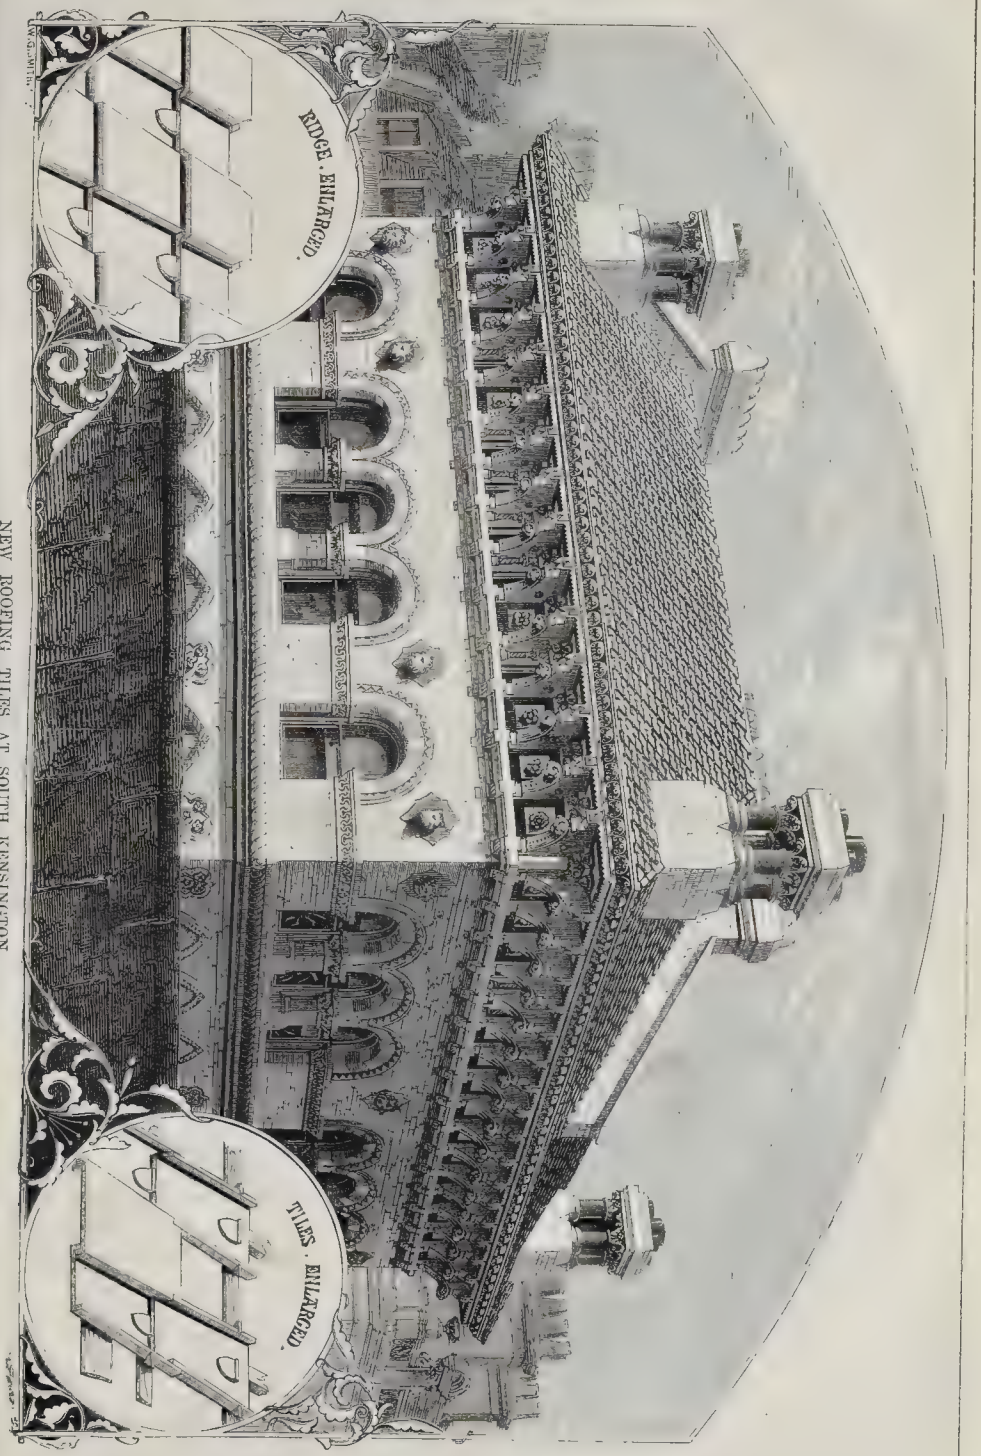
It will be seen from these facts how large a portion of the inhabitants of St. James's, Westminster, are engaged in sedentary or indoor occupations. This, perhaps, will throw some light on the statement I made last year, that, in proportion to its population our parish suffered more from consumption than any other in London. This disease is mainly produced by want of fresh air, and is especially engendered in overcrowded dwellings and ill-ventilated shops and work-rooms."

The mortality of the past year is only slightly above the average of the last seven years. The number of deaths was 757; and no particular form of disease was more destructive than usual.

Opening of the German Hospital at Dalston.—This building, of which we recently gave a view and description, has been inaugurated by the Duke of Cambridge.

SALTBURN-BY-THE-SEA ASSEMBLY ROOMS.—Mr. John Ross, Architect.

These buildings are intended to be commenced forthwith, and will be constructed of white pressed firebrick with local freestone dressings. The estimated cost, exclusive of land, is 9,000*l*. The buildings are designed to contain concert and promenade rooms, library, reading and refreshment rooms, together with a certain amount of lodging accommodation, and will stand upon a prominent site.



The upper part of the tower is intended to be used as an observatory; and, being at so great an elevation above the sea, will command a most extensive view. The assembly-rooms will form a southern corner termination to a terrace of lofty first-class dwelling-houses, which are attached at the north end to a large and commodious hotel now in course of erection.

The whole range is designed by the same architect (Mr. Ross) with a view to harmony of effect, and when complete will present a handsome frontage seaward. The growth of the iron trade in the county of Durham and Cleveland has been so considerable that an increase in the means of recreation for the inhabitants of the district is fast becoming necessary.

NEW ROOFING TILES AT SOUTH KENSINGTON.

THE NEW ROOFING TILES AT SOUTH KENSINGTON.

With the aid of photography we give an exact representation of a roof, the novel appearance of which, and harmony with the style of the building, arrested our attention, and induced inquiries as to its nature and peculiarities. We found it to be the invention of Mr. John Taylor, jun., of Whitehall, architect, whose many practical improvements in building appliances have before been noticed by us, and are now well known, particularly those developed in the stations of the London, Chatham, and Dover Railway from his designs. It is not always we find an inventor able so successfully to carry out his views fully in detail, without which no satisfactory results can be looked for; but the fact is, that Mr. Taylor has not invented, as many have done, for the mere sake of inventing, but to correct existing defects, or meet wants that have become evident in his practice.

Tiles for roofing have some advantages over slates: they are warmer in winter and cooler in summer, and, from their appearance, would be more generally used were it not for their greater weight requiring heavier timbering; and they must be laid to a steeper pitch.

In answer to our inquiries, Mr. Taylor has furnished us with the diagrams in the margin, and particulars, from which we glean the following. These tiles may be laid to as flat a pitch as slates, and their weight is 720 lb. per square, being less than half the weight of plain tiles. Their appearance is ornamental, at the same time that they are economical, being as cheap as plain tiles.

It will be seen from the diagrams, that the same tiles that, when laid, form the lower or channel tiles, become, when reversed, the upper or capping tiles, in alternate rows. There are notches which allow the side flanches to bear from end to end upon the adjoining upper or lower tile, and permit all to range in unbroken horizontal lines. The nibs or shields regulate the gauge, giving a 2½ in. lap, which has been found sufficient. The under tiles are secured to slating battens with wedge-headed nails, which also, with the nibs, secure the upper tiles.

The ridge is a continuation of the upper and lower tiles made of a V shape, the flanches of the upper ridge tile capping over the flanches of the lower ridge tile; so that there are no screw holes, and all joints are lidded or capped. The tiling requires neither filleting nor pointing, being, when properly laid, perfectly tight and close.

The colours are red, white, blue, and brown. Our readers will know where to obtain any further information should it be desired.

We may mention that the architect of the handsome buildings to which they are applied is Mr. Charles Gray.

RESTORATION OF HORSHAM PARISH CHURCH.

The ceremony of laying the first stone of the arcade in the new aisle took place on Saturday last, in the presence of a great number of people. On the top of the block of stone which was laid by the vicar, was a circular plate, bearing the following inscription:—"Dedicated to the glory of God, and laid by the Rev. J. F. Hodgson, vicar of the parish, October 8, 1864. R. H. Hurst, Esq., Lay Rector. Thomas Bourner, William Lintott, James King, Churchwardens. S. S. Teulon, Architect. J. Howes, Builder." The vicar, in his address, said "How many generations have come and passed away since the first stone of this noble pile was laid! and by whom we know not, but it was 300 years before the Reformation. The different form of architecture of the building bears witness to the different epochs through which the nation had passed during the time. The tower was built in the reign of Henry I.; another part in the reign of Henry III.; the chantry in the reign of Edward II.; and the part where we are now standing in the reign of Henry VI.; another part in the reigns of Richard II. and Henry VIII., and this latter monarch swept many beautiful things from this old church. The ancestors of Queen Elizabeth have been buried here, and she once came down to the place to see the repairs of the monument erected over them. Oliver Cromwell, the great protector, has been here too, and I have seen his signature to the appointment of one of my predecessors as the vicar of the parish of Horsham."

CONTINENTAL NEWS.

Hanover.—The twentieth birthday of the Crown Prince was celebrated the other day, amongst other ways, by the consecration of a new church, called Christ Church, which has just been completed, at the sole expense of the King. It is the first new Protestant church built in this Protestant city for upwards of a century, and was begun five years ago, since which time the works have constantly been progressing. The church consists of a nave (rising 60 ft. to the crown of the vaulting, and 100 ft. to the ridge of the roof), two side aisles, a north and a south transept, and a five-sided apsidal chancel, having five smaller "chapels" grouped around them. These compartments, however, are not chapels, but serve,—one as a vestry, another as a royal entrance and box, and the other three or centre ones as means of communication and passage behind the altar, it being the practice for German Lutherans, in taking the Communion, to receive one Element at one end of the Communion-table, and then to pass on behind it, in order to receive the Cup at the other. A tower, 250 ft. high, rises at the western end of the nave, having two boldly projecting buttresses on its western face, between which a wide entrance-hall has been arranged, likewise vaulted. The total length of this church, which is Early German Gothic, is 210 ft. by a width of 83 ft. The materials are red brick, relieved by white sandstone dressings and mouldings; and the interior brickwork is plastered, leaving, however, all stonework exposed to view. The total cost, including a peal of bells and a very splendid organ, both of which are ordered (the latter, to cost 2,250*l.*, is being made by Walker, of Ludwigsburg), was estimated at about 30,000*l.*; but it is thought that this sum has already been exceeded.——The celebrated "Bavaria" statue, near Regensburg, is about to have a formidable male rival, in the shape of a colossal "Hermann," in the Teutoburger Wald or forest, in the kingdom of Hanover. Herr von Bandel, who is the sculptor engaged on this work, has now finished the enormous head and winged helmet of the hero, and is very ready to show any casual visitor to this city, interested in things on a large scale, the gigantic head, the feet, arms, &c.——The little village of Leveste, the scene of a great conflict in the fourteenth century, is also to have a monument to commemorate that event. It was here that, in 1373, Duke Magnus Torquatus, of Wolfenbuttel, was conquered by Count Otto of Schaumburg, and lost his life. The monument is 13 ft. high by 7 ft. broad, and was designed by Mr. Vogell.——A couple of years ago the ancient almshouses in this city, known as the Gasthaus (or hostelrie), founded in 1568 by the Countess Agnes von Rittberg, was accidentally destroyed by fire. Subscriptions have since been received for the purpose of enabling the trustees to build new and larger almshouses on a more modern plan, and in another part of the city. The foundation stone for the new buildings, which are to hold a hundred superannuated poor of both sexes, was laid with much ceremony and due Masonic honours by the Landdrost, or civil governor, in the absence of the King, on the 26th of September. It is arranged that any sums exceeding the amount collected by subscription will be met by the municipality of the capital.

Holstein.—The town of Tonning, well known in this country as the port whence much of the "roast beef of Old England" is shipped, is about to perpetuate the memory of the battle of Friedrichstadt, in 1850, between the Holsteiners and Danes. An obelisk, 12 ft. high, composed of a monolith of Silesian marble, is being prepared for this purpose at the marble works of Mr. Barheine, in Berlin.——The town of Gravenstein is erecting a monument in memory of the Prussians who fell in the last Danish war. It is 12 ft. by 10 ft., and 18 ft. high, and is composed of blocks of concrete taken from a Danish powder-magazine. The jambs and lintel of the door to the magazine have been here inserted, and in place of the door is fixed an iron tablet on which are the words in high relief, "*Dulce et decorum est pro patrie mori.*" Here follow the thirty names, with date and place of action. A cross surmounts the whole; at its foot is the Prussian eagle.

Italy.—Arrangements are being made for the accommodation of the Italian Parliament at Florence, the new capital of Italy. The Upper House will meet in the grand hall of the Cinque Centi, in the Palazzo Vecchio, whilst the senate will hold its sittings in the saloon of the Duecenti, under the same roof.——The recent excavations at Pompeii have led to another interesting discovery. A square block of white marble was found near the Isis gate, on the sides of which the Roman calendar is engraved. Each side contains three months in three columns, over each the zodiacal sign of the respective month. Interesting, and, for some, even important notices, are written against the days, with regard to astronomy, agriculture, and the religion of the Romans. Thus the days of religious festivals, &c., are accurately marked. Near the top Apollo is seen driving the chariot of the Sun; whilst below, near the base, Ceres is engaged collecting corn into a sheaf. This curious remnant of bygone days is now placed in the museum at Naples.——Dr. Paolo Livy is engaged in excavations, carried on at his own expense, in the ancient bed of Lake Fimona, four miles from Vicenza, where he has discovered the remains of very ancient pile-drivings, similar to those which have been found in other lakes in Lombardy and Switzerland. He reached the heads of some of these piles at a depth of 6 ft. from the surface, and the charred appearance they present shows that the buildings which once stood on them were destroyed by fire. Rude implements, such as flint lance-points, keys, and other objects made of bone, some bones of the wild boar, &c., to some extent show the antiquity of these works.——Venice has been very active lately in the restoration of her many noble edifices. The façade of St. Mark's has been cleaned down and repaired; and the Palace of the Doges has a new roof, and has been thoroughly repaired inside and out. The fine Renaissance building of Antonio Rizzi, on the Canale di Canonica has been repaired, and so have the Churches San Sebastiano (Paul Veronese's), Santa Maria dell' Orto, San Salute, San Giovanni e Paolo, &c. The Fondaco dei Turchi has been turned into a museum, and a number of palaces have likewise been renovated, in which process, however, more attention has been given to usefulness than to beauty.

St. Petersburg.—Mr. Bernardakis, the Greek banker, has recently transmitted the magnificent sum of 140,000 francs towards the completion of the university at Athens. This building was commenced as far back as 1840; but it has never been completed.——A new lying-in hospital has just been opened in presence of H. R. H. the Prince of Oldenburg, the Minister of War, the Governor-General, and other distinguished people. The building is situate in the Nadeschdinskaja-street, and contains accommodation for 112 free beds, and an institution for sixty-five midwives. It was begun in 1851, under the direction of Mr. Staegemann, architect, and has cost 60,000*l.*, including fitting up.

Cologne.—In the course of restorations now going on in the church of the Minorites, which was built in the thirteenth century, some interesting wall-paintings have been discovered under the whitewash and plaster. Some coats of arms which are represented seem to point to the beginning of the fourteenth century as the time when these paintings were executed. A Brother Henry lived in the convent at that time, painter and monk; and to his brush these works are attributed.

THE INEQUALITY OF LOCAL TAXATION.

At a meeting held recently in Finsbury, Mr. Torrens remarked that the local rates of St. Luke's were now 4s. 4d. in the pound; and he found that the sum paid last year amounted to more than 10s. a head on every individual in the parish. Ten years ago they had to pay but 6s. a head. The cause of the increase was not far to seek. The City parishes had by recent architectural improvements contrived to disburden themselves of great numbers of the poorer classes, who had been driven into St. Luke's and Bethnal-green; and the destruction of humble dwellings to make room for new railways in Clerkenwell and elsewhere had contributed to the same result. The speaker remarked that railway companies ought to be compelled within certain limits to rebuild habitations for the working classes, or to compensate the parish whose industry they dislocated. This is a matter which must ere long meet with an effective remedy. The Inns of Court pay no poor-rates: the custodians of those places shut their gates on one day of the year according to established custom. They *support their own poor*, which in those realms of the law amount to none.

THE PROPOSED RESTORATION OF WINCHESTER CROSS.

At the last meeting of the committee a report was read, showing that the total amount of subscriptions received and promised was 490*l.*, being within 110*l.* of the required sum necessary for completing the restoration of this structure in accordance with Mr. Scott's design, including the three large figures for the lower niches and eight smaller ones for the upper niches. The committee, believing they had received sufficient encouragement, and with the expectation of being able to raise the sum still required for the carrying out of the work, resolved that it should be undertaken at once, and appointed a building committee, who were to have the management of the work, with full powers. It was also agreed that the work should be entrusted to Mr. Garmer, of London, who had been recommended by the architect, and had offered to complete it to his satisfaction for 500*l.* The lower niches will contain the following statues: King Alfred the Great; Florence de Lunn, the first mayor of Winchester, A.D. 1184; and William de Wykeham. At this meeting Mr. Baigent suggested the following figures for the upper niches: St. Swithun, Bishop of Winchester; Henry II., who gave them their city charter; St. Ethelwold, Bishop of Winchester; Seher de Quincy, the first Earl of Winchester; Mark le Fayre, Mayor and benefactor; St. Grimbald, the celebrated monk of Winchester; John Devenishe, Mayor and benefactor; and Sir Simon de Wynton, knight, a benefactor to the city and cathedral *temp.* Edw. I. These were unanimously adopted, and the list ordered to be forwarded to the architect.

METROPOLITAN BOARD OF WORKS.

At the meeting of the Board on the 14th inst., a report on the proposed removal of Middle-row, Holborn, was brought up. It stated that—

"The cost of accomplishing that object, including the purchase of the property, the necessary pavements, &c., would be 46,625*l.*; and to purchase the south side, with a view of making an improved frontage, would amount to 35,300*l.* additional, making a total of 82,934*l.* The matter had been referred to the superintendent architect, Mr. Williamy, to make a survey, and report as to the cost of removing Middle-row, and he reported that the cost of acquiring the property of that block of buildings would be 61,152*l.*, but it would not be desirable to purchase the property on the south side of Middle-row, because, after the sale of the ground-rents there would be a cost to the Board of 20,000*l.*"

The Engineer read a long correspondence as to the granite for the Thames Embankment, giving evidence in favour of the Dalbeatie stone. That a good granite should be selected is of the greatest importance, and the utmost care is therefore desirable. The importance of the question to quarry owners, too, is very great, and is leading, as might be expected, to charges and countercharges, at present not very clear.

THE BRIGHTON PAVILION.

The general restoration of the Pavilion to the condition in which it was when opened by King George IV., including the re-hanging of many of the original decorations removed on the dismantling of the palace, and recently presented to the town by the Queen, has been completed, and has been celebrated by several entertainments. The works have been done, as our readers may remember, under the direction of Mr. Pantaenius, by Mr. Tony Dury, of Warwick. The expenditure, we understand, will be about 6,000*l.* We reserve our opinion as to the result.

THE ASSISTANT SURVEYORSHIP OF PLYMOUTH.

After some discussion as to whether or not the newly-elected surveyor was to be considered an officer of the council, and what were his duties, the election of assistant surveyor was proceeded with, at a recent council meeting. Three candidates only attended out of those selected: they were each subjected to a series of questions, in order to test their engineering ability. The following is a specimen of the questioning:—Mr. G. Le Corney asked Mr. Bellamy (the first candidate called in) what he would do in the event of the main pipes of the town bursting. Mr. Bellamy: I should shut off the valve nearest to the pipes that burst. Mr. Le Corney: Well, what would be your next course? (laughter). Don't laugh, gentlemen; you make yourselves fools (renewed laughter). Mr. Arkell: I rise to a point of order. If this mode of questioning is to be turned into one of amusement, it will be well for some of us to retire. The Mayor: Do you mean this for amusement, Mr. Le Corney? (a laugh). Mr. Le Corney: No, sir, I don't. I was never more serious. I asked those questions—practical ones—in earnest. Mr. Bellamy was then further asked by Mr. Le Corney how he would disconnect the pipe, and then connect again; for these matters were of very grave importance, and with which all hydraulic engineers ought to be conversant. Mr. Le Corney was then proceeding to argue the question, when Mr. Latimer rose to order, and said he considered if the questions were asked, the questioner should not argue the point as to whether the engineer was correct or not, because there might exist a difference of opinion as to the mode of doing certain work, and it might be a question also which mode was the best. The numbers were—for Mr. Bellamy, 19; for Mr. Shopland, 16; the former being thus declared elected.

COLD WATER ON THE SPIRITS.

Having, when viewing the performance of the Davenport Brothers, expressed considerable scepticism and an utter contempt for the paltriness of an exhibition for which was claimed the character of "manifestation," I was invited on Tuesday night to the residence of a gentleman in Eccleston-square, to see a professional conjuror, Mr. Tollemarque. The result of my visit was a thorough confirmation of my doubts; and a proof was given to all present that the performance of the Messrs. Davenport is mere juggling trick; that the application to their ridiculous exhibition of any such term as "manifestation" or "passive agency," is simply an untruth; and when put forward by Dr. Fergusson, who claims consideration "for the dignity of manhood," the honesty of purpose, "the marvellous power of these young men," is a fraud on the public of the grossest possible character.

Mr. Tollemarque, in a speech more ingenious and gentlemanlike than a stump oration I had heard at the other exhibition, explained his reasons for wishing to expose the Messrs. Davenport. He then submitted to be bound to a chair. This was done by a gentleman who on a previous occasion had tied one of the Davenports; and as he had been jeered by his friends for not properly securing that person, he took good care that in the present instance they should not make a similar accusation. Mr. Tollemarque was therefore unmistakably secure. A question arose whether the lights should be put out, but as they were oil lamps and not gas, and therefore difficult to relight, it was agreed that the *séance* should be continued in the light. A screen was then placed before Mr. Tollemarque, and in about half a minute the jingling of the tambourines and the discordant striking of the guitars commenced, and the "spirit hand" was seen above the screen. The tambourines came flying about the room, the guitars followed, and in about three minutes Mr. Tollemarque requested the screen to be removed, when he stood before the audience unbound.

He requested to be tied again; and the writer, who had a theory about pinioning, proceeded to bind him in a way which was deemed perfectly secure. The screen was again put up. The same Davenport row ensued, excepting that Mr. Tollemarque not being able to play on the fiddle, he could not treat us to that one nigger melody with which the "spirits" seem always to delight themselves. A friend of mine has attended the Davenports three times, and he has always heard the same tune.

The result in this case, as in the former, was that Mr. Tollemarque walked out free and unfettered. He submitted to be fastened for a third time, and on this occasion it was done by our host. There could be no question that he was perfectly secure. The screen had scarcely been put up when Mr. Tollemarque exclaimed, "I am tied so tightly, will any one give me my instruments? You will not: then take my coat;" and the coat came flying over the screen among the audience. Mr. Tollemarque immediately appeared unbound in his shirt sleeves.

The delight among the sceptics, arising from this illustration of passive agency, can easily be imagined. One gentleman present, somewhat of a believer in "the spirits," would not acknowledge his conviction that Mr. Tollemarque had tied himself up again. This he did twice in as short a space of time as he took to untie himself, if not shorter. Between the acts, Mr. Tollemarque exhibited some clever tricks of sleight of hand, the art which he honestly professes; and, as a last and crushing act for the poor spirits, he showed us Mr. Foster's trick of "the writing on the arm in characters of blood." Mr. Tollemarque had previously explained to one of the gentlemen present how all these things were done. I did not ask for a solution. Mr. Tollemarque professes to amuse. He honestly states that he is a conjuror; and, while he only exercises his abilities as such, it is not for me to promulgate the secrets of his art. But I hold it is the duty of every honest mind to denounce an attempt to establish a character for possessing divine or miraculous gifts by the exhibition of powers that after all are only meant to extract guineas from the pockets of the credulous and the superstitious.

F. S. A.

*** We are able to vouch for the good faith of the writer of this communication, which goes wholly to confirm our assertions of last week. We may hope that one out-crop of a widely-spread delusion has been cut off.

CIVIL ENGINEERING AND THE INDIAN GOVERNMENT.

Sir,—In the *Builder* of June 11th I noticed a letter from a civil engineer in the Bombay Government service, in which the writer professes to be satisfied with the manner in which he has been treated by Government, and hinting that those engineers who were sent to Bengal had no reason to be dissatisfied. I am not acquainted with the terms of the covenant of those who came out in 1855; but, as Government has, since January, 1859, been yearly sending out batches of ten or twelve young engineers to the Bengal presidency, I think it right, for the benefit of those who may be intending to trust themselves to the sense of justice of the Bengal Government, to give you a few details of what they have to look forward to.

I need not recapitulate the terms of the Government advertisement: they must be pretty well known to your readers. I may state briefly the requirements, viz., that the candidates must either have served a regular apprenticeship to a civil engineer for three years or else have been two years at a civil engineers' college, besides one year in practice. They are then required to pass a searching examination in all the details of their profession. When appointed they are called probationary assistant engineers, and may receive from 170 rupees to 200 rupees per mensem. After a year's service they are required to pass a second examination in this country before being appointed to the permanent strength of the Department of Public Works; they are then called second-class assistants, and receive 250 rupees per mensem, or 300*l.* a year.

There is a Government Civil Engineers' College at Roorkee, in the North-West Provinces, where any officer can obtain leave to study for the Department of Public Works. After a term of from, I believe, one year to a year and a half, they pass an examination (at which a pluck is of the very rarest occurrence to officers), and are then appointed probationers, and, like civilians, have a second easy examination to pass before they are made second-class assistants. Their pay then varies from 420 to 500 rupees per mensem,—if lieutenants, according to the corps to which they belong; if captains, it is considerably more;—so that they receive nearly double the pay of civilians of the same grade, besides the advantage of having acquired their engineering knowledge at the expense of Government.

Now, as to *promotion*. The following facts speak for themselves:—Since 1859, out of fifty-eight civilians who have entered Government service, only one has been made an executive engineer, and one a special assistant, appointments the pay of which is 500 rupees a month. Since the same date, fifty-two officers have entered the service, out of whom seven have been made executive engineers, and three special assistants: they receive from 525 rupees to nearly 800 rupees, according to their military rank and to the branch of the service to which they belong. So that the chances of promotion of a civilian to those of an officer are as 1 : 5½, a state of things which must continue to exist as long as all the heads of the department are military men, who naturally view with disgust the introduction of the regularly apprenticed in competition with military amateur engineering. Your Bombay correspondent deprecates the pub-

lication of facts likely to deter young engineers from coming out here in Government employ; but, sir, I consider it the duty of every man to guard his professional brethren against disappointment. The fact that Sir Charles Wood has lately introduced a set of rules for pension and furlough considerably less advantageous than those hitherto in force, proves that Government are not disposed to ameliorate our condition: as long as this is the case I would advise engineers not to come out, if they can possibly do otherwise. The time will probably come when the Government may see the necessity of dealing fairly with their servants, but the manner in which the medical and engineering professions have lately been treated proves that that time has not yet arrived. ANOTHER VICTIM.

Central India.

P.S. I enclose my name and address for your private information.

*** Letters in the *Calcutta Engineers' Journal*, and even the observations of the editor of that publication, who is evidently not disposed to find fault with the authorities unnecessarily, show that the feeling expressed by our correspondents is very general. The Home Government should give the subject re-consideration.

STONEHENGE.

I WAS much gratified with the notice of this remarkable and curious ruin in your journal, and the interesting paper upon it, read by the reverend Prebendary Scarth, on the recent visit to it by the British Association. I happened to see it a few days after their visit, with a friend, and the impression on both our minds, from a small recent fracture, was, that the large blocks have the grain of marble. But my main reason for thus addressing you is to state, it appeared to both of us, that what is termed the unhewn stone, standing isolated 200 ft. from the eastern end, has a distinct and well-defined lion's head crowned, of colossal proportion, facing the ruined temple. It may be a *lusus naturæ*, created by time and the stone's decay, but it is so beautiful in proportion and character, if a lion could be imagined sitting on his haunches, that I would fain enlist the opinion of others by its further notice. It is principally to be seen from the rising ground about 30 ft. south-west of the block, and cannot be so thoroughly defined in any other position. We took our flyman to the spot, and asked him if he could trace any figure. He said, "Oh, yes; it is a lion's head very clear; and I am astonished that neither I nor the hundreds of people I have brought here in my time have ever before observed it." It may or may not be a mare's nest of our imagination, but it struck three persons separately with such remarkable force, that I think it right to state the fact for future examination and notice, if you deem it worthy. W. B.

EXTENSIVE FIRE AT PIMLICO.

THE Pimlico Patent Wheel Works have been destroyed by fire, and nearly the whole of the walls have fallen. The premises occupied almost an acre of ground. On the top of the roof was a large iron tank filled with several hundred gallons of water, but which in its fall made no impression on the fire. On the smoke in some degree subsiding it was discovered that the timber stacks on the eastern side of the factory, containing nearly 5,000 loads of timber, had caught fire, and the efforts of a portion of the brigade were directed to save this portion of the property, in which they were partially successful. On the extinguishment of the fire in this quarter depended the safety of the Victoria Railway Station and the Grosvenor Hotel; for had it obtained a firm hold of these timber stacks it would have been almost an impossibility to have saved the above places from destruction. As it was, a portion of the roofing of the station caught fire, and was greatly damaged. Hardly had the flames been arrested in this quarter than a new danger presented itself in another portion of the premises—the coal stores—which had been filled with 100 tons of coal. These stores had ignited, and presented the appearance of a huge mountain of fire, throwing up showers of coal-dust as from a volcano. The fire was at length got under, but the railway communication was threatened from a huge mass, the rear wall of the factory, still left standing in a tottering condition, and comprising many tons of brickwork. This mass of brickwork hung over and within about twenty yards of the railway tunnel, threatening to break through the roofing of the tunnel. While this terrible fire was raging, Messrs. Trollope & Read, builders, and the owners of the surrounding works, as well as the railway authorities, were taking all possible measures to keep the fire away from them; and owing to timely precautions the amount of damage done to the surrounding property was comparatively inconsiderable.

The amount of property destroyed is estimated to be at least 100,000*l.*, and it is stated there was no insurance existing on the premises or stock. The origin of the fire could not be ascertained.

Had the large stacks of timber in Messrs. Trollope & Co.'s extensive premises been added to the conflagration, it is hard to say where the fire would have stopped. The timber-yards of the metropolis are a highly dangerous ingredient in its miscellaneous composition. By the Metropolitan Building Act, the wooden frame of a window must be placed 4 in. within the face of the wall, or proceedings will follow; while hundreds of building yards can be stuffed with timber *ad libitum*, without any Act compelling or authorising any interference whatever.

A NEGLECTED CITY ON THE SEVERN.

SIR,—Nothing but malice could have penned the series of untruths published in your last, with the signature of "A Lover of Progress." I am not a native of Worcester, and, therefore, have but little interest beyond that of a well-affected citizen, in supporting its fair fame in the eyes of the world; but I can safely assert that I know of no city in England, *cæteris paribus*, so enterprising, so lively, and so flourishing. No new buildings, quotha! Why, sir, within the last ten years, the fine old city of Vigornia has been almost inclosed in a new one. In all the cardinal points the suburbs have been so enlarged, and streets and squares are now so generally in erection, that it is astonishing how any one could sit down deliberately to say the thing that is not. The only fear is that we are overbuilding ourselves. The principal demand for new buildings arose from the establishment of the railway workshops (this being now the centre of a most important railway system just completed), and a very large staff of artisans here, added to which, the great increase of our local staple trades of late,—vinegar (of which, perhaps, your correspondent has had too large a draught), Worcestershire sauce, gloves, china, coach-building, engine works, &c.,—has necessitated a stimulus in the building trade, and, consequently increased accommodation for something like 35,000 population (your own correspondent's statement), as compared with much less than 30,000 in the census of 1851.

Mr. Editor, I wish you would pay us a visit. No doubt, you would have an ample field for condemnation and friendly advice, but, at the same time, you could not fail to perceive how grossly "A Lover of Progress" has shown that he is no lover of the truth. New churches, new chapels, new almshouses, new schools, immense blocks of buildings, like little towns, in Sansome-walk, Chesnut-walk, the Blockhouse, Happy-land, London-road, the Moors, Barbourne, &c., have so transformed the place that, if you knew it before, you would scarcely recognise it now. The Arboretum is *not* closed; the public baths *are* enjoyed by all who like to pay a moderate price; the theatre is amply sufficient for the notoriously declining state of the drama; any number of boats may be procured at the Grand Stand or the quays; and, instead of being deficient of institutes, we have a plethora of them, and a complete sickening of lectures, concerts, amateur theatricals, soirées, and things of that kind.

I have no patience to continue this apology for our fine old city; yet to leave such a tissue of falsehoods uncontradicted in your wide-spread and influential paper, would be as unjustifiable as the motive which prompted the originator of the scandal.

JOHN NOAKE, Sub-Editor of *Worcester Herald*.

SHOP SHUTTERS.

I AM putting in a new shop-front, and have heard of a shutter much used in Paris, being thin sheets of metal, to slide up altogether into the fascia, and which must be obtainable at a much lower price than those now in use of iron and wood, to go on rollers, and can be used where there is not room for the rollers.

I have made many inquiries in London, but am unsuccessful in finding any one acquainted with the fitting or the cost of them. Perhaps, if my requirements are made known in your next issue, it may lead to some result, and be interesting to many of your readers. A. B. C.

ENGINEERS' CHARGES.

SIR,—Will some of your readers kindly answer the following questions, about which there seems much doubt:—

What is the charge for railway work per mile for trial sections, and depositing the usual Parliamentary plans and sections?

What per mile if standing orders be passed and the Bill be prepared for committee?

What per mile, including all charges up to completion of work, if the line be carried out?

What sum per cent. for preparing quantities, estimates, and specifications? A. R. T.

CHIMNEY-SWEEPING.

Is there any mode of remedying the inconvenience occasioned by the new method of cleaning chimneys, by which the soot is driven out at the top of the chimney instead of being swept down, as formerly? The tank-water from the roof of my house, which is in the country, standing quite by itself, is poisoned with soot, and the shrubs all around it covered. The roof, which was carefully cleaned yesterday is to-day powdered with soot in consequence of the sweeping this morning of only one chimney; and the shrubs are also covered with it. A. Z.

COMPETITIONS.

Walsall New Town Hall and Gaol.—A special meeting of the town council was held, in St Matthew's Hall, the mayor presiding, for the purpose of examining the twenty-three sets of designs and plans for a new town-hall and gaol, and also to receive a report of the town-hall and gaol committee on the subject. It was unanimously resolved, on the recommendation of the committee, to adopt the design and set of plans marked "Experiar." The premium of 15*l.* for the second best set of plans was awarded to the set marked "O. O." On opening the sealed envelopes forwarded with the plans, it was found that the plan adopted was by Mr. G. B. Nichols of West Bromwich (the architect of the Free Library), and the second best set the production of Messrs. Bellamy & Hardy, Lincoln.

Bowdon Church, Cheshire.—Several architects from Manchester and the North were invited to compete for this new church. After a fortnight's examination of the drawings by the committee they adopted the designs of Mr. J. Medland Taylor, of Manchester; and the work is to be at once begun under his superintendence. The church is to seat 1,000 persons,—900 upon the ground-floor, and 100 in a western gallery. The nave is divided from the aisles by a clerestorial arcade, and the broad and lofty chancel terminates apsidally. There is to be a south-western steeple.

Bolton-le-Moors.—For the Church of St. James, Bolton-le-Moors, upwards of sixty designs were sent in. The trustees reduced the number first to twelve, then to six, then to two, and finally decided to adopt drawings the author of which was found to be Mr. J. Medland Taylor, of Manchester, who has now received the formal appointment of architect to the trustees.

FROM SCOTLAND.

Edinburgh.—The town council have been considering the scarcity of water at present so much felt in the town; and have remitted to the Lord Provost's committee to confer with the water company on the question, to consider the matter generally, and to take steps in the direction of ensuring, as far as possible, the constant supply to which the inhabitants are entitled. It was then moved, "that it be remitted to the streets and buildings committee to consider the propriety of acquiring ground for a permanent public park in the north-west district of the city." In supporting the motion, the mover adverted to the anxiety of all the inhabitants of the city for the opening of the West Princes'-street Gardens, and insisted on the desirableness and possibility of this being brought about. The motion,—with an addition, remitting the subject also to the Lord Provost's committee, and also remitting it to that committee to consider the desirableness and practicability of opening the West Princes'-street Gardens,—was agreed to.

The Glasgow School of Art. The medals and prizes awarded by the Department of Science and Art have been distributed to this school. There were 4 national medallions; 4 students gained "honourable mention" in national competition; there were 14 local medals; 4 students gained "honourable mention" in local competition; and 28 prizes of boxes of water-colours, mathematical instruments, &c., were distributed. Fifty-four students passed the examination successfully, passing in 72 papers in free hand and model drawing, geometry, and perspective. The total number receiving instruction in drawing, in or through the agency of the school in 1863, had been 3,326, showing a total increase of 281 over the previous year. This included 2,271 children of public schools, 343 students of private schools, 47 teachers and pupil teachers, whilst 665 students had attended the Central School. The Lord Provost afterwards delivered a short address. His lordship went on to say that it appeared now that the future maintenance of the school must be mainly thrown upon the citizens. Well, be it so. He trusted the citizens of Glasgow would not allow the institution to languish in consequence of the withdrawal of this support. The school itself was admirably situate, and all that was wanted from the citizens was some 3,000*l.* or 4,000*l.* to clear off the purchase-money of the building and its fittings, and then the fees of the students, together with any other resources which might be placed at the disposal of the directors, would amply suffice for carrying it on. A resolution "That the School of Art is eminently deserving of the support of the citizens

of Glasgow, and that an earnest effort should be made to have the debt removed, so as to insure the continuance of the institution," was carried by acclamation; as was also the following:—"That the thanks of the meeting, and of all friends to the School of Art, are due to Mr. Heath Wilson for his valuable services during upwards of fifteen years as head master of the school." Mr. Wilson, in reply, said that in retiring from public life, after a service of twenty-seven years, he was happy to add that, being in tolerably good health, he would still be able to devote a portion of his time to their service. He trusted the people of Glasgow would cordially unite in coming forward to aid the school, and he might be permitted to remind them that the first school of design established in the United Kingdom was a Scottish institution. It was now 104 years since the School of Design in Edinburgh was established, and during all that long period it had flourished under the direction of various able masters. Seven-and-twenty years ago he was master of that school, and since then he had been employed in various portions of the kingdom, and had been connected with many of the committees governing schools both in England and Scotland. Having visited schools of art in all parts of the Continent, he was able to say, from experience, that there was as much natural talent for art existing amongst the pupils of the British schools as of any other similar institutions in the world.

IRELAND.

The success in the growing of flax, and in the spinning and weaving of that valuable fibre, for which the north of Ireland is celebrated, is exciting a generous emulation in the other quarters of this island. The movement may at present be attributed to the rise in the price of calicoes and other cotton goods, or rather to the cotton famine which has caused it. In no part has this progressive step been taken more warmly than in the south. Amongst the many mills which have recently sprung into existence, not the least is that at Millfield, in the suburbs of the city of Cork, and situate in close proximity to the Blackpool tunnel of the Great Southern and Western Railway. The company who have erected these mills, have purchased the premises at a cost of something over 1,500*l.* The principal lot comprises 18 acres, held for an unexpired term of 920 years, at 106*l.* per annum. The other lot consists of 25 acres, which can be used for bleaching, flax culture, &c., with an extensive range of stores and offices, a powerful waterwheel and engine, &c., already *in situ*, together with residence for the manager. The company have commenced the erection of an extensive spinning-mill on an adjoining site, pronounced unexceptionable. On this building a sum of over 45,000*l.* will be expended.

Mr. Richard Evans has contracted for the mill; Mr. Richard Brash for the chimney; Messrs. Smith for the metalwork; Messrs. Hecks, of Bolton, for the engine; and 6,000 spindles will be supplied by the Messrs. Coombe, of Belfast; this being only one-half of the number ultimately intended. Messrs. Boyd & Batt, of Belfast, are the architects.

The Marquis of Downshire, on Thursday, the 8th inst., performed the ceremony of laying the foundation stone of a new Presbyterian church, in Banbridge. The cost of the building is estimated at 1,400*l.*

A bequest having been made by a charitable lady, of the city of Dublin, at her decease, for the building of three new churches in desirable neighbourhoods, the trustees have taken prompt measures for the accomplishment of this object. One of these churches is to be erected in the neighbourhood of Kingstown, on the estate of Lord De Vesci. It provides accommodation for 600 persons, one-third of the sittings being free, and will be rendered conspicuous by a tower and spire. Mr. Alfred G. Jones is the architect.

A coastguard station is being erected at Donaghadee, county Down, to accommodate ten boatmen, and a chief officer. There will be also a watch-tower and boat-house. In all, a sum of 1,100*l.* will be expended.

At Balbriggan, in the county Dublin, a similar building is in course of erection, but of more ornamental character. It provides accommodation for seven men and one officer, and will cost not far from 2,400*l.* These buildings are from the plans and under the direction of the architect to the Commissioners of Public Works.

Derry.—The contract has been taken for building the new district church of Clooney, Waterside, parish of Glendermott, by Mr. Alexander M'Elwee, and preparations are being made for commencing the work. The parish church has been enlarged and improved at a cost of upwards of 1,200*l.*, and affords accommodation to nearly 500 persons. There are, however, 1,600 members of the church in the parish, and this, taken in connexion with the distance from Waterside, renders additional accommodation necessary. A new church is, therefore, to be erected at Waterside, by private contributions and a grant from the Ecclesiastical Commissioners. The design is by Messrs. Lanyon, Lynn, & Lanyon. The building is intended to accommodate 450 persons, so that when it is finished church accommodation will be afforded for nearly 1,000 persons in the parish of Glendermott. The grant made by the Ecclesiastical Commissioners amounts to 3,000*l.*

Kenmare.—The Roman Catholic Church of Holycross, which had been in course of erection during the past two years, has been consecrated by the (R. C.) Bishop of Kerry. The expense incurred in the erection of the church has been defrayed by Archdeacon O'Sullivan. At a cost of over 5,000*l.* he also erected, close to the site on which the new church stands, a convent and schools, in which over 400 children are educated and trained to industrial pursuits. The church is cruciform. Its length from the extreme end of the chancel to the western gable is 130 ft.; breadth of transept, 90 ft.; and height to apex of roof, 75 ft.

PROVINCIAL NEWS.

St. Ives (*Hunts*).—The St. Ives new Corn Exchange has been opened. The building is in the Italian style, and consists of two stories, which comprise a hall 106 ft. long, 36 ft. wide, and about 40 ft. to the ridge; in addition to which there are reading-rooms, committee-rooms, lavatories, and offices. At the lower end of the hall is a special reading-room, which, when occasions require, can be used as an extension to the large hall, increasing it to 130 ft. in length. This hall is the most commodious in the town, and will supply a need long felt both for commercial and entertaining purposes. The roof, which is of timber, is oak stained, and supports a cupola the entire length of building, from which it receives its ventilation. The greater portion of the light is admitted through the roof, which is open to the ridge. Mr. Hutchinson, of Huntingdon, was the architect, from whose design the work has been carried out by Messrs. Bunting & Son, Fenstanton, at a cost of about 1,500*l.*

Reading.—The Reading Town-hall, which has been for some months undergoing alteration and enlargement, under Mr. W. N. Woodman, the borough architect, has been re-opened. The principal offices have been remodelled, and the large hall almost entirely rebuilt. The interior of the latter now forms one of the leading features of the town. It is in the Italian style, with a ceiling deeply panelled into octangular coffers, and enriched with colours, while the walls present a succession of large semi-circular headed windows, alternating with plain surfaces, which are decorated with colour only, the centres of each containing shields emblazoned with the arms of worthies who have figured in the history of Reading. The lower part of the hall is lined to a height of about 6 ft., with a panelled dado; and at one end has been erected a new organ, adjoining which is arranged a moveable orchestra. The whole of the decorations have been executed by Messrs. Green & King, of London, who are also engaged, as we understand, in decorating the Town-hall at Bursiem.

Brighton.—In reply to a complaint made in the town council of the slow progress made in the erection of the new groynes at the eastward part of the town, the contractor, Mr. J. J. Bennett, wrote to say that everything had been done to expedite the works, but the rough seas and weather had very much impeded the work.—The Works Committee resolved "that the surveyor be authorized to employ a competent person to examine the outfall before giving his certificate of the completion of the works;" and, in reply to questions put as to the necessity of employing such a person after paying between two and three guineas a week for a man to superintend the work as it proceeded, Mr. Alderman Lewis said the clerk of the works was discharged before the work was completed; and Mr. W. Hill added, that, although every confidence could be placed in the surveyor and contractor, the committee thought the work which had been done under water should be seen, for the satisfaction of the contractor and council, before the money was paid. The council confirmed the resolution of the Works Committee.

Charminster (*Dorset*).—The new lunatic asylum for the county, at Charminster, the chapel of which has just been opened, consists of a considerable pile of buildings placed on a hill some quarter of a mile off the Cerne turnpike road, and about midway between the village of Charminster and the old asylum at Forston. The approach to it is very bad, being long and hilly, although a viaduct of magnitude almost equal to a piece of railway work, carries the road across a valley. The pile is built of a uniform coloured brick, relieved by black and yellow dressings. In front stands a considerable house for the superintendent. The main entrance to the building is by a large hall, paved with patterned tile. A staircase leads to a committee-room, and right and left there are various corridors forming communications with the different wards and apartments. The chapel, which forms one of the fronts of the building, is a large hall with an open-raftered roof, of considerable pitch, the height of the hall being probably 35 ft. The south side has five large windows, filled with enamelled glass, in which green largely prevails. The opposite side is a wall, just relieved from deadness by a couple of doorways leading into a parallel corridor. The interior being entirely of brick, uncovered, some skill was required to overcome the blank appearance of the north wall, and this has been effected by string courses of red and yellow brick, and by carved Caen corbels, from whence the roof springs. The chapel is seated with open pine benches, stained. The architect is Mr. E. Kendal, of London; and the builder, Mr. Roberts, of Islington.

CHURCH-BUILDING NEWS.

Bromley St. Leonard's.—The foundation-stone of a new church, in the parish of Bromley St. Leonard, near Bow, of the vicarage of which Mr. John Walter, M.P., is patron, has been laid by the Countess of Ellesmere. The new church, which will be dedicated to St. Michael and All Angels, is designed for the East-India Docks district and ship-building yards, containing 16,000 persons, chiefly mechanics and labourers. By the exertions of the late Earl of Ellesmere and others, a building was erected in 1862 for church and school purposes, and Mr. David M'Intosh offered a site for a church and parsonage, provided the erection of the church was proceeded with at once. Plans were approved, and it was arranged that a church should be erected at a cost of 7,000*l.*, with a parsonage at a cost of 1,500*l.* The site is in St. Leonard's-road, near the entrance to the East-India Docks. The edifice is to be in the Early English style, from designs prepared by Mr. J. W. Morris, and is to contain 1,300 seats, all free.

Tatsfield (*Surrey*).—The parish church of Tatsfield has undergone repair,—the tower, roof, and chancel having been under the hands of the workmen. In the interior, the old, irregular pews have been taken away, and the whole church repewed. Some of the old oak carving, the remains of an ancient screen, which formerly divided the nave from the chancel, had been inserted in the panels of the pulpit and the side of the reading-desk, but has been cleaned and repainted. The work has been done by Messrs. Smith & Worssell, of Oxted.

Datchet (*Bucks*).—It is proposed to enlarge the parish church. Among the alterations contemplated, are the extension of the north aisle; the removal of the gallery, and consequent opening up of the west end of the church; and lastly the extension of the south aisle, by about 140 sittings, will be thus gained. The probable expenditure will be about 1,000*l.*, which it is proposed to raise by voluntary subscriptions.

Kingsworthy (*Hants*).—The parish church of this village, which, during the past summer, has been considerably enlarged and completely repaired, the additions consisting of the lengthening of the nave and south aisle by about 12 ft., and the erection of a new chancel and vestry, has now been re-consecrated by the Bishop of Winchester. The new chancel is paved with Minton's tiles, and the east window is filled with stained glass illustrating the birth, burial, and ascension of the Messiah. Other windows in the east end and chancel are filled with subjects in

coloured glass as memorials. Messrs. Vokes & Carter, Worthing, were the builders; Mr. Newman, Winchester, the stonemason; and Mr. Etheridge, the plumber employed. Mr. Gibbs, of London, provided the stained glass. The architect was Mr. J. Colson, of Winchester.

Huntingdon.—The new organ and pulpit of All Saints' have been formally dedicated. The new pulpit is composed of a stone base, from which rises a shaft of veined marble, supporting a carved book-desk of alabaster. The whole is surrounded by a wrought railing of brass, with flowers of burnished copper and tin. The brass-work was from the establishment of Messrs. Potter, of London. The organ, which occupies the chamber on the north side of the chancel, and has two fronts of drapered pipes facing south and west, was built by Messrs. Bryceson, Brothers, of London.

Chardstock (*Dorset*).—The new church which has risen upon the site of the old pile has been opened. The old tower is retained for the present. Mr. C. Trask, of Norton, was the contractor for the masonry; Mr. M. Davis, of Langport, builder; and Mr. G. Dunn, of Chard, plumber; and the whole building was designed by and carried out under the superintendence of Mr. J. M. Allen, of Crewkerne, architect. The body of the church throughout is seated with low open benches. The whole of the passages and the chancel are paved with Minton's encaustic tiles, for which the Right Hon. Lord Alwyne Compton made special designs. Between the chancel and the nave is a screen executed in Bath stone, with marble inlays let into the panels. This screen, with the exception of the marbles, is the gift of Mr. C. Trask, of Norton, the contractor for the masonry. The east window is filled with stained glass by Messrs. O'Connor. This is the gift of the nieces of the vicar. The small two-light window on the south of the chancel is also by O'Connor, and is the gift of the architect. The three windows in the college chapel are filled with stained glass by Mr. W. Warrington. The east one, a three-light, is the gift of the members of the college.

Bacton (*Suffolk.*)—The parish church has been restored and re-opened. The plaster on the walls has been removed, and, by exposing the rubble work, a fresh appearance has been given to the whole. A new cornice appears to have been put round the clerestory. The entrance on the north side has been blocked up, and a new door made through the west gable of the tower. The south porch has been restored, furnished with stone benches and a new oaken door. The floor has been re-laid, the nave with Peake's metallic tiles. The foundations of the walls and the bases of the pillars have been removed; the old pews superseded by benches, and the whole of the nave and the aisles have been either re-benched or the existing ones touched up. At each end of the aisles is a new window in the Decorated style. The cost of these and other restorations now completed will be about 800*l.* The architect employed was Mr. Butterfield, of London; and the builder, Mr. Elliston, of Sudbury.

Cottingwood (*near Morpeth*). — All Saints' Chapel, at Cottingwood, has been erected and opened, for the accommodation of the inmates of the County Lunatic Asylum, at that place. The edifice is in the Early English style, built from designs by Mr. Howison, the county surveyor and architect. Both the interior and exterior of the chapel are very plain. The chancel is lighted by a three-light window: at the west end there are two windows, and four on each of the sides. A small belfry rises above the west end of the chapel. The sittings are open benches of stainer wood, and afford seats for 250 persons, rather more than the number of patients in the asylum. The reading-desk and pulpit are placed at either side of the chancel. There is a harmonium.

Kendal.—The interior restorations of the parish church have been completed. The south wall has been strengthened by a plain chamfered base of hewed freestone outside, with a limestone facing in broken courses; and also by the rebuilding of the whole of the buttresses on that side, with one exception. These are built of freestone in broken courses, having hewed freestone facings and three heights of weatherings. A moulded freestone stringcourse has also been inserted in the south wall, and surmounting the whole is a battlement of the same material; below which runs an ornamental string moulding with projecting square blocks and gurgoyles, all of freestone, and waiting for the sculptor's chisel. The east end of Parr Chapel has been entirely rebuilt of a mixture of freestone and limestone in broken courses, and is intended to be finished with crocketed pinnacles and a battlemented pediment, having ornamental moulding and gurgoyles corresponding with those on the south wall. The whole of the old windows—six to the south and one to the east—with their square panes of common glass, have been replaced by new ones. The restoration has cost altogether about 2,200*l.* The architect employed was Mr. J. S. Crowther, of Manchester; the contractors for the carpentry, Messrs. J. Fisher & Samuel Compston; for the masonry, Mr. J. Stewart; for the plumbing and glazing, Messrs. Winder & Gibson; and for the staining, Messrs. G. Jackson & G. Lyon, all of this town.

DISSENTING CHURCH-BUILDING NEWS.

Manchester.—The foundation stone of a new Congregational Chapel for Charlestown, Manchester, has been laid. The building will accommodate about 400 persons on the ground-floor, and 180 in the end gallery. There will be no side galleries. It is estimated to cost about 2,700*l.*, exclusive of the spire, which will be 500*l.* more.

Marple.—Sir J. Watts, knight, of Abney Hall, Cheadle, has laid the corner stone of a new Congregational church, in Hollins-lane, Stockport-road, Marple. The edifice is to be built in the Gothic style, of Yorkshire stone, with dressings of Bath stone. The dimensions inside will be 44 ft. long and 32 ft. wide. At the north-eastern corner is to be a tower, surmounted by a spire, which together will be 68 ft. high. The tower alone will be 12 ft. square. On the summit of the tower, and supporting the spire, will be pillars with caps and bases, and pointed arches. The space between the pillars and under the arches will be filled with louvre boards. The structure will have stone buttresses between the windows and at the corners. In the front gable, facing Hollins-lane will be a wheel window, with tracery, and cusped: it will be arched with Bath stone. The height of the building to the apex of the roof will be 17 ft. clear. There are to be two public entrances, of which the principal will be through a porch under the tower. The roof is to be open, and plastered between the rafters. The timbers will be stained and varnished, and supported by principals. The sittings are to accommodate 220 persons in open stall benches. There will be two aisles and the seats on each side of the building will be placed at an angle of 30 degrees. At the south end of the building it is intended to have a vestry, 30 ft. long and 13 ft. wide. The church is to be erected from the designs of Messrs. W. G. Habershon & Pite, architects, London; and the contractors are Messrs. Davenport & Swindells, Stockport. The building will cost about 1,200*l.*, and of this about 600*l.* have been raised without any general appeal to the public.

Bilston.—The new Independent chapel here has been consecrated and opened. The building has been erected at a cost of about 1,500*l.*, from the designs of Mr. Bidlake, architect, Wolverhampton. It is internally 60 ft. in length and 37 ft. in width, and will accommodate 330 persons on the ground-floor, and 285 in the end and side galleries. The style of architecture is Italian, consisting of a centre and two side wings; these latter projecting about 6 ft., and entrance-lobby between a broad flight of steps, forming the approach from the street. Internally the ceiling is deeply coved at the sides, and enriched with a moulded cornice, and the joinery throughout is stained and varnished. Under the chapel is a school or lecture-room, 54 ft. by 36 ft. The work has been carried out by Mr. Hickman, of Bilston, builder, under the superintendence of the architect.

Bradford Moor.—The chief stone of a new Wesleyan Chapel has been laid at Bradford Moor. The new building will accommodate over 1,000 persons. The extreme dimensions outside the walls are 56 ft. wide and 81 ft. 8 in. long, besides a projection in the rear forming a vestry, with organ gallery over, 10 ft. 8 in. wide. The height from floor to cornice is 35 ft. 3 in. The walls are wholly of stone, with ashlar dressings. The front towards Leeds-road is the only one where any attempt at decoration has been made, and in this front a portion, 32 ft. 10 in. wide, projects slightly before the main walls, crowned by a cornice and pediment of its own. It also contains three entrance-doors, opening into one vestibule, from which access is gained to the gallery staircase, right and left, and to the two aisles in the body of the chapel. The lower portion of this projection is of cleansed ashlar, in rustic and plain courses alternately, with moulded jambs and archivolts to the doors and a Doric cornice. The other openings in this front have also moulded jambs, archivolts, imposts, and strings. The building will be raised nearly 10 ft. above Leeds-road, and flights of steps will gain the required height. The style of architecture will be Italian. The total cost of the building, including architects' commission, heating apparatus, fence walls, and fittings, will be about 3,735*l.*, towards which a sum of 2,170*l.* has been raised. Messrs. Milnes & France are the architects, and the various works have been let to the following firms:—Messrs. Cordingley & Peel, masons; Messrs. T. Taylor & Sons, joiners; Mr. J. Hill, slater; Mr. J. Duckworth, plasterer; Mr. J. Schofield, plumber; and Mr. E. Harland, painter. The Low Moor Company will supply the warming apparatus.

SCHOOL-BUILDING NEWS.

Southampton.—The new school premises which have been erected in the Northam-road, for Taunton's Charity, have been formally opened. The site, which was equivalent to a money gift of upwards of 300*l.*, was presented to the charity by the mayor. A palisading protects the premises from the main road. At the entrance to the school is a lobby, which communicates with a cloak and hat room. The school-room is 40 ft. long by 20 ft. wide, and 20 ft. high; and the committee-room is 15 ft. by 12 ft. A yard, playground, and requisite out-offices adjoin. The building is in the Gothic style, the jambs, mullions, and arches being formed of moulded bricks; the hearths of tiles. The roof is open, stained and varnished. The school-room is lighted by two windows, the centre light running up into the gable, so as to give ventilation. The whole has been constructed under the direction of Mr. R. Critchlow, of Southampton, architect, by Mr. C. C. Martin, builder, whose contract was somewhat under 500*l.*

Barbourne.—Within the last few months, and at an easy distance from the church, a large structure has been rising. It includes schools for boys and girls, with a residence in the centre for the master. The site on which the building stands was given by private benevolence, and towards the cost of the school-house, 600*l.* 19*s.* 4*d.*, was raised by private subscription, 254*l.* by Government grant, and 50*l.* by diocesan grant, leaving a deficiency of 150*l.*, the expense of the new structure and adjuncts being about 1,150*l.* Mr. Rowe, of Worcester, was the architect, and Messrs. Wood & Son, the builders. The walls are of brick, with stone facings and dressings, and mullioned windows, square headed; steep-pitched roof, slated, with gabled fronts, and a bell-turret in the centre of the principal front. On each side of the residence for the master is a large school-room and class-room adjoining. Both sets of rooms are exactly similar, are light, well ventilated, and lofty, the principals of the roof being trussed with iron. They have open fireplaces, with stone mantelpieces, and are furnished with seats on graduated floors.

York.—The chief stone of the Primitive Methodist Jubilee School, on the Malton-road, near this city, has been laid. The site comprises about 8½ acres. The buildings extend towards the front, and the whole of the old outbuildings have been taken down, to allow room for the new additions. The new buildings will have a frontage to the road of about 140 ft., and will be treated in the Italian style, with red bricks intersected by white and black. The school-room constitutes the centre of the erection, and stands forward from two side wings about 14 ft. The roof will be surmounted by a turret, rising to the altitude of 65 ft. All the rooms will be large and lofty—the school-room 47 ft. 6 in. by 27 ft. 6 in., and the dining-room 40 ft. by 26 ft., each room on the ground-floor about 15 ft. high. The establishment will also be provided with extensive kitchen arrangements, class-rooms, lavatory, dormitories, bath-rooms, and out-offices, sufficient and complete for the working and necessary accommodation of 108 boys. A corridor will run the entire length of the building. There will be also a play-shed, gymnasium, and cricket-ground. The work is being carried out from the designs and under the superintendence of Mr. H. Fippard, of this city, architect, and has been let to Mr. R. Weatherley (the city sheriff) for the sum of 3,520*l.*

SCENERY AND THE THEATRE.

Drury Lane.—In recording the exquisite performance of Miss Helen Faucit in "Cymbeline," the newspapers state that the play is "admirably put upon the stage," "satisfactorily and pictorially rendered," and so forth; the acute and accomplished critic of the *Times* clinching the matter by a declaration that "the scenery is excellent." Had they not done so, we might have let the matter pass; but, this being the case, it becomes our duty, in pursuance of the course we have taken for many years, to protest against the manner in which the play is presented as discreditable to the management of what must be considered the principal theatre in the metropolis, and injurious to public taste. The chronological incongruities of the piece are quite sufficient of themselves to confuse and to interfere greatly with the pleasure of the thoughtful spectator; but one thing is, nevertheless, quite clear, namely, that the play represents the time when the Romans had dominion in Britain; say, without question, the first century of our era. What should be thought, then, when we state, without mentioning minor incongruities and absurdities, that one of the scenes used represents a fifteenth-century Gothic interior!

New Theatre in Manchester.—In addition to the two old-established theatres in Manchester, the Theatre Royal and the Royal Queen's,—a third, named the Prince's Theatre, has just been erected by a limited liability company, and was opened last Saturday evening. The new theatre, which is in Oxford-street, has an ornate Italian façade in stucco. The internal area is 480 square yards, and is calculated to seat 1,590 persons, there being, above the pit, first a dress circle, and then an upper circle, rising and receding so as to admit a gallery at the back. The act drop is by Mr. W. Beverley. Attention has been paid in the construction of the theatre to the personal comfort of the audience. The architect is Mr. Salomons. The opening play was "The Tempest."

Books Received.

Lectures on Public Health. By E. D. Mapother, M.D. Dublin: Fannin & Co. London: Hardwicke.

The author of this useful volume is professor of hygiene and medical officer of health to the city of Dublin, and surgeon to St. Vincent's Hospital. The lectures were delivered at the Royal College of Surgeons. They treat of air and its impurities, ventilation, water and its impurities, food, exercise, sanitary architecture and engineering, and various other branches of sanitary science; and the subject is illustrated by wood-cuts. It is highly satisfactory to have a work such as this published in Dublin. A somewhat similar book was some time since issued in Edinburgh; so that the three kingdoms are showing symptoms of an awakening to the importance of sanitary reform. The efforts of the sanitary pioneers are much more fully acknowledged in these lectures than in other recent books of similar class which we could name.

The author appears to have tried some further experiments in the testing of air impurities by means of permanganates, on the plan some years since brought under notice by Mr. Condy and Dr. Angus Smith, but of which we have heard very little lately. We shall be glad to find Dr. Mapother's volume circulating widely.

VARIORUM.

"Report upon the Water Supply of Croydon," by B. Latham, C.E. September, 1864. Printed at the *Surrey Standard* Office, Lewes. Mr. Latham says on this subject, at the outset of his report:—"In inquiring into the water supply question of Croydon, it is very satisfactory to have to report that the supply is abundant. The completion of the new well, at a cost of a little under 1,000*l.*, will give quite 1,000,000 gallons per day additional supply to that at present furnished by the old well. Although the new well is sunk only 56 ft. from the old well, but to twice its depth, or 150 ft., yet the connexion between the water in the two wells is at present very slight, which leads me to conclude that it is not the same vein of water that supplies both wells. During the dry and warm season we have passed, you furnished from the old well water at the rate of 1½ million gallons per day. If this quantity be added to the quantity given by the new well, we have now a certain volume of water, equal to 2½ million gallons per day, to deal with." An increase of engine-power is urged.——"The Church Builder," for October, has a paper on the Mediæval Brickwork of France, and one on the Warming of Churches, worth looking into.——"The Glasgow University Calendar, 1864–5," gives full particulars of the constitution, laws and regulations of the University.——Taking time by the forelock, Messrs. De la Rue & Co. have already issued their "Indelible Diary," "Red Letter Diary," and "Memorandum Book," pocket-books and calendars of all sizes. They are all "got up" in first-rate style, and being mostly edited by Mr. Glashier, F.R.S., the astronomical information may be depended on.

Miscellanea.

Architectural Association. — The opening *conversazione* will be held at the House in Conduit-street on Friday next, the 28th inst.

Builders' Benevolent Institution. — We would direct attention to the circumstance that the annual dinner of this valuable charity is fixed for Thursday next, the 27th. Mr. Thomas Lucas will preside, and a long list of stewards gives promise of a good gathering.

The Fired Building in Gresham-street.—Fears being entertained of the falling of the front of the warehouses in Gresham-street, an extensive scaffolding has been completed, preparatory to the commencement of operations for the reconstruction of the buildings, and of Haberdashers' Hall adjacent thereto.

Thames Embankment. — The first stone of Contract No. 2 was laid by the engineer-in-chief, Mr. Bazalgette, on Wednesday last. The works of this portion extend from the eastern side of Waterloo Bridge to the lower end of Temple Gardens, a length of 1,970 ft. Mr. A. W. Ritson is the contractor; and Mr. T. D. Ridley, the general manager.

Fifteen Houses and other Buildings destroyed by Fire.—At Bargate, Christchurch, a fire of great magnitude has occurred, by which the occupants of fifteen houses have been rendered houseless. The fire originated in a thatched building used as a bakehouse. Nearly every fire in this place—and they have not been few—has had the effect of lessening the number of thatched buildings in the town; the result being a continued improvement, by the erection of houses of a more substantial and less hazardous character.

Opening of Public Park at Farnworth.—The public park at Farnworth has been inaugurated by Mr. Gladstone. The day was observed as a holiday. The park is the gift of Mr. Barnes, one of the members for Bolton, and is situate a couple of miles from that borough. It is between 11 and 12 acres in extent, and is said to be worth about 3,000*l.* It has been open for the use of the public for some three years past, but has never been formally inaugurated, in consequence of some difficulties as to the proper local authorities to whom it should be transferred.

Monumental.—It is proposed to erect a statue of Mr. Gladstone at Liverpool. The public appear to be bent upon the erection of statues of living men, a practice discountenanced by the the Prince Consort in his own special case. The statue will be erected either in the Town-hall or St. George's Hall.——In accordance with a proposition in the *Builder* that busts or portraits of local worthies might usefully be placed in the respective public buildings of the localities in which they lived, it has been proposed by Mr. R. A. Kinglake to form a sculpture gallery of Somerset worthies in the Shire-hall. He has commissioned Messrs. Tyley, of Bristol, to execute a memorial bust of the "Good Bishop Ken," well remembered in the diocese of Bath and Wells. The Marquis of Bath permitted Messrs. Tyley to make a photograph of the portrait of Ken in the picture-gallery at Longleat; and Scheffer's painting of Ken, in the Palace, Wells, was also copied for the same purpose, by favour of Lord Auckland. Another subject of sculpture is a memorial bust of the celebrated loyalist, the Rev. Henry Byam, D.D., rector of Luccombe, Somerset, and chaplain to Charles II. in his exile.

A new Order of Spinning-wheels. — A Frenchman suggests that the wheels of carriages could be used for spinning. He considers that, at present, a great deal of power is wasted which might thus be usefully applied.

Cirencester School of Art.—The drawings of the students for the year ending April last were arranged in the Corn Hall for public exhibition, and the prizes have been distributed there to the successful candidates, by the Hon. W. L. Bathurst, in the presence of a large and respectable company. In addition to the drawings and paintings on the walls, a number of models and artistic works were grouped around the platform.

Fall of a Roof.—At Normanton Iron Works, the roof of a large new forge which has for some months been in course of erection by Messrs. W. Thompson & Co., has fallen in. Several men were injured, but none of them seriously. The slating of the roof was completed, with the exception of about an hour's work. The forge is about 48 ft. long, and the depth of the roof 22 ft. The roof was supported by iron girders on pillars of the same metal. It is supposed that the girders must have been too weak.

Hydro-Carbon Light.—At the Queen's Hotel, St. Martin's-le-Grand, the Rev. W. R. Bowditch, of Wakefield, recently explained the advantages of an invention which he had patented. The gas on its way to the burner is made to pass through a metal box containing hydro-carbon (which does not seem to be new, however), when vapour is generated by the heat of the jet and mixed with the gas as supplied to consumers, so increasing the brilliancy of the gas. The necessity of having the box containing the hydro-carbon suspended above the gas jet may be an obstacle to the introduction of the process in many cases; but it might, perhaps, be made to assume the shape of a smoke-collector, thin round the outer edge and hollowed in below.

Dangerous Businesses in the Metropolis. The Metropolitan Building Act of 1844 prohibits, after the 9th of August, 1864, the erection of any buildings within a given distance from any buildings, public road, or ground in use, for any of certain dangerous businesses. This Act, however, saved, until August, 1864, the rights of persons who had actually carried on, in 1844, businesses of the nature referred to within the prohibited distances. The Metropolitan Board have now drawn the attention of the authorities in each parish to the fact that all these saving rights have ceased, and it is unlawful for any person to carry on such businesses within the distances, however long they may have been in existence.

Drainage of Brackley.—Complaints of fever from inadequate drainage have led to the mayor calling public meetings on this subject, when Mr. Garrett, the surveyor to the Banbury Board of Health, reported that the existing drains were quite unfit for house sewerage. Many of them merely acted as cesspools, and he had no doubt the illness was caused by the contents of the bad drains percolating through the soil into the wells. Mr. C. Blencowe, who strongly deprecated draining into the river Ouse, proposed that further evidence should be laid before the inhabitants upon the present drainage insufficiency. This was carried by a large majority, and it was further agreed to forward the minutes of the meeting to the board of guardians. At a meeting of the guardians subsequently held, it was resolved to apply to a London engineer to report.

Electric Light in Factories. — Professor Seely, of New York, proposes to employ the current generated by an ordinary frictional electric machine, and obtains the light by interrupting the current. He proposes to secure the continuous action of the machine in all weathers by surrounding it with a glass case, and keeping the air within the case dry by means of chloride of calcium or other hygroscopic substance. Professor Seely is now engaged in experiments to ascertain what material will produce the most intense light; and if the apparatus works according to anticipation, a factory in which machinery is employed may be lighted without any additional expense, except the small power required to turn the electrical machines. As, in mills driven by water, there is always a surplus of power during the winter months, the only time when lights are required, there would be no expense for this light except the first cost of the apparatus, which would be quite moderate.

The Oporto Crystal Palace.—The Crystal Palace at Oporto, in Portugal, the first stone of which was laid by King Pedro V. in 1861, is nearly finished, and the directors of the establishment intend to inaugurate it by an international exhibition.

Failure of a Railway Bridge.—A new iron bridge which carries the Whitby Deviation Railway across the Ellerbeck, in Gothland, has broken under the weight of a passing engine, according to a Leeds paper. The engine fell through, but the men escaped.

Railway Matters.—The traffic receipts for railways in the United Kingdom amounted for the week ending the 8th of October, on 11,596 miles, to 688,405*l.*, and for the corresponding week of last year, on 11,261 miles, to 622,459*l.*, showing an increase of 335 miles, and of 65,946*l.* in the receipts.

Liebig on the Utilization of Sewage.—Lord Robert Montagne has received a letter from Baron Liebig, in which he expresses great anxiety lest the British farmers should suppose that town sewage is all-sufficient for the indefinitely-prolonged manuring of the soil, as disappointment would be sure to follow, and a reaction of opinion against the use of sewage established. They ought to be instructed, he considers, that town sewage is not like stable dung, an all-sufficient manure, but requires certain elements in addition, and either farmers or sewage companies ought to add these elements to the sewage. If the Baron be right, however, in this respect, how does it happen that where sewage has been used for many years in irrigating land, the crops yielded are just as abundant as ever? One would think that town sewage ought to be the most miscellaneous and universal of all manures.

The Metropolitan Sanctuaries.—The condition to which the sanctuaries had fallen is very elaborately and graphically described by Sir W. Scott in the "Fortunes of Nigel." The sanctuary which he describes is that of Whitefriars; but the sanctuary *par excellence* in London was that at Westminster. It was a strongly defended place on the north side of St. Margaret's Church, containing streets, houses, taverns, a church; in short, a little town in itself, garrisoned by a lawless and desperate population, who would have fiercely resisted any ordinary attempt to violate their privileges. There was another sanctuary in the Minories. There were others in the neighbourhood of Fleet-street, viz., Salisbury-court, Whitefriars, Ram-alley, Mitre-court; in Holborn, Fulwood's-rents; and Baldwin's Gardens, in Gray's-inn-lane; the Savoy in the Strand; and in Southwark were Montague-close, Deadman's-place, the Clink, and the Mint. These continued to enjoy their privileges, and to harbour the vice and crime of the metropolis, until suppressed by Act of Parliament so late as 1697. Even after that the Mint was allowed to reassume its former character, and that with increased profligacy, until it was finally abolished in the reign of George I.—*The Churchman's Family Magazine.*

Brickmakers' Contracts.—At the Salford County Court, before Mr. Sowler, Q.C., the case of Peacock *v.* Ashworth was heard. The matter excited great interest among operative brickmakers and members of the union. The action was to recover 26*l.* 16*s.* 11*d.*, of which sum part was for making 358,000 common bricks at 8*s.* 10*d.* per thousand, and the remainder for casting clay for 143,000 bricks, at 1*s.* 3*d.* per thousand. The question in the case was whether the plaintiff had not deprived himself of his right to claim the amount by himself breaking up the contract, which he was alleged to have entered into with Mr. Ashworth. It appeared that shortly before Peacock left the employment of Ashworth, who had engaged him, according to custom, "for the season," a great number of "green" bricks at the croft were trampled and destroyed, and there was a cessation of work. Peacock left without completing his alleged contract. The judge was of opinion that there had been no act of the plaintiff to cause the cessation, nor was the defendant liable for that misfortune, at the same time the men might have gone on brickmaking on some parts of the ground had not the defendant stopped them. Judgment for the plaintiff for the amount claimed, less 8*l.* for the cast clay he left behind. Notice of appeal was given. Three other cases of a similar kind, and four cross actions, will be ruled by the decision.

Competition in Tread-mills.—The visiting justices of the county of Middlesex have awarded the offered premium of 25*l.* to Mr. Thomas F. Fillary, jun., of London, for the most approved design for their new set of tread-wheels, for working 160 men at one time.

The Cobham Brasses.—The unrivalled series of monumental brasses in Cobham Church, near Rochester, together with other monuments of the ancient lords of Cobham, are being restored effectually, at the cost of Captain Brooke. The sculptures are assigned to Mr. Richardson, and the brasses are under the care of Mr. J. G. Waller.

Death from the Fall of a Ceiling: a Warning.—On Tuesday an investigation was made concerning the death of Alice Stanton, aged eight years, the daughter of a brass-finisher, who died from the effects of an injury received through the falling in of a ceiling. It appeared that the parents of the deceased, up to about three weeks since, resided at No. 10, John-street, Tottenham-court-road, removing the day after the occurrence which has resulted in the present inquiry to No. 5, Heriot-place, Gospel Oak-fields. While at their late residence, the landlord gave an evening party, at which there was some dancing, which had the effect of breaking the ceiling. The mother of the deceased called the attention of the landlady to its condition the following day, but had no apprehension of its falling in. No repairs were made, and they gave notice to quit, but the day before their removal the ceiling fell in, and the child received a violent blow on the head. Neither the father nor mother complained to the landlord, as they did not think the ceiling would fall, and they had made up their minds to remove. A verdict of "Accidental death" was returned.

The Coinage of 1863.—The coinage return for 1863, according to the *Artizan*, shows that the number of ounces of gold transformed into sovereigns and half-sovereigns was 1,696,939·01. These produced of sovereigns, 5,921,669, and half-sovereigns, 1,371,574. Of silver converted into florins, we have 341,280·00 ounces, yielding 938,520 pieces. Of silver afterwards issued in the form of shillings, the quantity used at the Mint, in 1863, was 156,240·00 ounces, producing 859,320 pieces of money. The number of sixpences struck from 44,640·00 ounces was 491,040; and the number of threepences, from 43,404·00 ounces, 954,888. Of bronze, 340 tons weight was used for the purpose of coinage, and this produced 28,062,720 pence, 15,948,800 half-pence, and 1,433,600 farthings. Something like 4,000,000 of silver and bronze coins, besides, were struck for Hong Kong. The total number of coins of all denominations produced during the past year by the Royal Mint was therefore 59,998,961, or not far off 200,000 per day. We have to complain, adds the *Artizan*, of the very tardy appearance of the return.

The New Graving Dock, Sunderland.—The first portion of this new graving dock is drawing towards completion. The contractors, Messrs. Hirst & Son, expect to finish their work by the 1st of December next. The total length of the dock, when finished, will be 420 ft., the first portion now in course of construction being 250 ft.: the width at the bottom is 40 feet, and at the top 75 ft.; the entrance at the top is 60 ft. wide; and the depth of water on the cill at high-water is from 16 ft. to 17 ft. The dock has been constructed so as to give great facilities for the repair of both iron and wooden vessels, and the sides are a series of easy steps, which are sloped, so as to admit the fullest amount of light during the short days of winter. The caisson is being completed by Messrs. Hawks, Crawshay, & Sons, of Gateshead. The work has been designed and carried out under the superintendence of Mr. Thomes Meik, C.E., the engineer to the commissioners.

Madrid Direct.—Another of the famous capitals has been connected with London by direct conveyance. The traveller can be passed from London to Madrid, by way of Folkestone, Paris, and Bayonne, it is said, in forty-eight hours. This line of communication is a tripartite one. From Paris to Bordeaux you are on the "Chemin de Fer d'Orleans," extended to the latter city; and from Irun to Madrid by the "Norte de Espana." The latter is the affair of MM. Pereire, the well-known French capitalists. It connects Madrid with Valladolid, Burgos, Vittoria, and San Sebastian, and also with Santander by a branch at Buenos and Bliblo.

TENDERS.

For a new building in the Gray's-inn-road, for Messrs. Eley, Brothers. Mr. George Judge, jun., architect. Quantities supplied by Mr. Thos. Nicholls:—

Trollope & Sons	£10,775 0 0
Lucas, Brothers	10,720 0 0
Lawrence & Sons	10,560 0 0
Patman & Fotheringham	10,500 0 0
Mansfield & Son (accepted)	10,380 0 0

For building dwelling-house and shop in Commercial-street, Whitechapel, for Mr. Sayer:—

Hardiman & Sandon (accepted)	£940 0 0

For alterations and repairs to house and premises No. 177, Marylebone-road. Messrs. New & Cumings, architects:—

H. & J. Ferguson (accepted)	£318 0 0

For school building at Wollaton, for Lord Middleton. Mr. Jas. Fowler, architect:—

Butler	£664 0 0
Warner	590 0 0
Marriott (accepted)	524 10 0
Cooper	463 0 0
Vickers	440 0 0
Ruckerly	440 0 0
Booker	438 0 0

For additions to the New City Club, George-yard, Lombard-street. Mr. James Henry Rowley, architect. Quantities by Mr. Wm. Ellison and Mr. F. W. Stent:—

Axford & Co.	£6,125 0 0
Piper & Wheeler	6,056 0 0
Browne & Robinson	6,023 0 0
Patman & Fotheringham	5,890 0 0
Brass	5,884 0 0
Myers & Sons	5,676 0 0

For additions to Kingston Barracks. Mr. C. H. Howell, architect. Quantities supplied by Mr. R. Roberts:—

Mansfield	£3,700 0 0
Holland & Hannen	3,683 0 0
Walker	3,459 0 0
Sims	3,403 0 0
Piper & Wheeler	3,306 0 0
Browne & Robinson	3,299 0 0
Jackson & Shaw	3,185 0 0

For Chertsey Police Station. Mr. C. H. Howell, architect.

Simpson (lowest)	£1,300 0 0

For diversion of sewer in Avenue-road, for Mr. Twentyman. Mr. J. Douglas, engineer:—

Scrivener & White	£153 0 0
Crocket	154 0 0
Roe	153 0 0
Watts	149 0 0
Abbot & Hopwood (accepted)	148 0 0

For building the Gospel Oak Schools, Kentish-town. Mr. Rickman, architect:—

Carter	£6,430 0 0
Brass	6,390 0 0
I'Anson	6,340 0 0
Jackson & Shaw	5,905 0 0
Sharpington & Cole	5,755 0 0
Macers	5,750 0 0
Newman & Mann	5,688 0 0

For erecting new Schools, St. Luke's Church, Portsea. Quantities supplied:—

Wigley	£1,000 0 0
Absalom	971 0 0
Burbridge	925 0 0
Backhurst	895 0 0
Bundy	883 0 0
King	859 15 0
Duffett	830 0 0
White	780 0 0
Byng	770 0 0
Harding & Clark (accepted)	749 10 0

For the erection of St. Barnabas's Permanent New Church, Harvest-road, Islington. Mr. Theodore K. Green, architect:—

Browne & Robinson	£6,330 0 0
Foster	6,195 0 0
Dove	6,000 0 0
Symms	5,898 0 0
Carter & Sons (accepted)	5,775 0 0

For Old King's Head, High-street, Islington:—

Harvey	£1,710 0 0
Martin	1,710 0 0
Williams	1,697 0 0
Morris (too late)	1,669 18 0
Langmead & Co. (accepted)	1,668 0 0

BELGIUM MARBLE CHIMNEY-PIECES.

THE LARGEST STOCK IN LONDON
ON VIEW AT
THE WESTMINSTER MARBLE WORKS.

T. H. HARTLEY & CO. have received a large consignment of Belgium Marble Chimney-Pieces, which are to be sold at such prices as must be considered extraordinarily low. Also a few lots of Vein box Chimney-Pieces from 30s. to 40s. each.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.

ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent. Whether sold under the name of "Improved Zinc Paint," or as the number Two or Three qualities, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.

CHEAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.

EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."

THOMAS HURBUCK & SON,
WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

CONTRACTORS FOR ROOFING THE GREAT EXHIBITION BUILDING OF 1862.

By Her Majesty's Royal Letters Patent.

F. McNEILL & CO. of LAMB'S BUILDINGS, BUNHILL ROW, LONDON,

Manufacturers and ONLY Patentees of
THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.
Patronized by

HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSIONERS OF CUSTOMS,
HONOURABLE EAST INDIA COMPANY,
HER MAJESTY'S WAR DEPARTMENT,
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK.

And by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland, at whose great national shows it has been submitted, and OBTAINED THE PRIZE, for being the best and cheapest article for roofing; also used for under slates at the Royal Agricultural society's House in Hanover-square. Its advantages are lightness, warmth, durability, and economy. It is impervious to rain, snow, and frost, and a non conductor of heat and sound. The Felt can be cut to any length, by 32 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its uses, and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen, and Gentlemen, who have extensively used it, sent free to any part of the United Kingdom. DRY HAIR FELT, for covering Boilers, &c. is also manufactured, by which a saving of about 25 per cent. in fuel is effected. The TRADE are respectfully enjoined to send their orders DIRECT to the FACTORY, as the surest means of being supplied with a good article, and in lengths best suited to their roofs. The original works where the above roofing is made are F. McNEILL & CO.'S Manufactories, LAMB'S BUILDINGS, BUNHILL ROW. Roofs covered with McNEILL'S FELT to be seen at the CAMPS at ALDERSHOTT, CURRAGH, KHUNCLAPUR, and COLEHESTER, upwards of Three Millions of Feet; also the GREAT EXHIBITION BUILDING of 1862, of nearly One Million Feet. A Liberal Discount allowed to the Trade.

PLASTER of PARIS.—The ONLY

London Maker, the best and the oldest established (1830), is
ROBESON,
MOUNT PLEASANT, GRAY'S-INN ROAD, HOLBORN.
The cheap country made article is sold by nearly all the dealers, agents, and pretending manufacturers, careless as to quality. Superfine and fine Plaster unequalled. Good plaster saves labour and vexation.
